

LSST DESC & COIN
RESSPECT
Recommendation System for Spectroscopic Follow-up

LSST France, 17 May 2022

Emille Ishida, on behalf of the RESSPECT team

The goal of RESSPECT:

To build a **recommendation system** for the construction of an **optimal training sample** given available spectroscopic resources.

*It is **NOT** the goal of RESSPECT:*

- Build a better classifier
- Maximize the number of spectroscopically confirmed SN Ia
- Test a complete cosmology pipeline
- ...

The SN Ia *photometric* cosmology pipeline

Cosmology results from photometrically classified SN Ia

Photo-classified SN Ia

Requires full light curves!

Optimize this!

Using this!

Feature extraction

Requirement: *Uniform matrix for both, partial as well as full light curves*

Using Bazin,

Comparing Different Parameterisations

$$f(t) = A \frac{e^{-(t-t_0)/\tau_f}}{1 + e^{(t-t_0)/\tau_r}} + B,$$

Data includes forced photometry

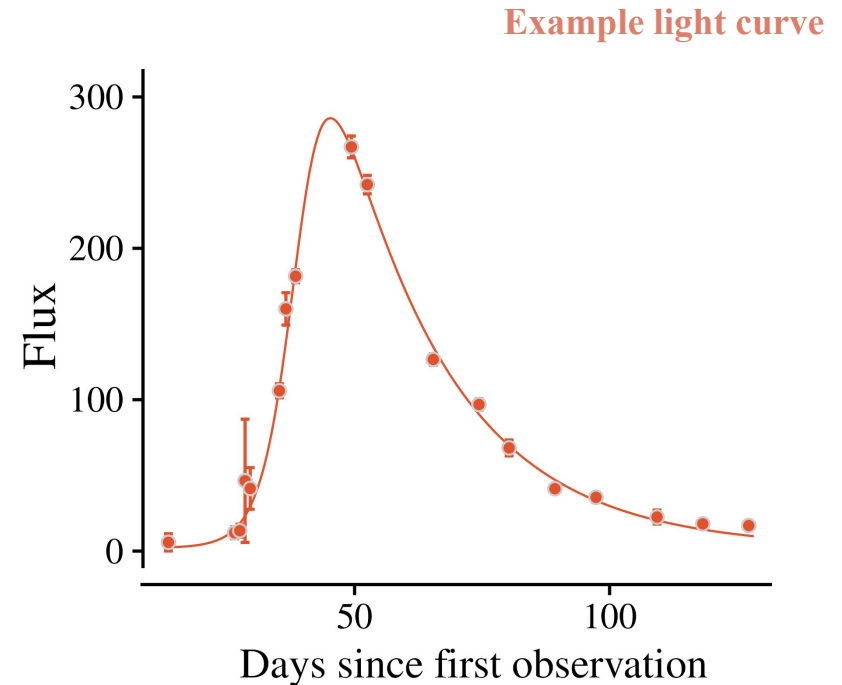

Name	# Params	Comparative Score (/ 100)	Time Taken	Authors
Bazin	5	56 ± 2	30 ms	Bazin et. al. (2009)
ALERCE v1	6	50 ± 2	37 ms	Sanchez-Saez et. al. (2020)
ALERCE v2	6	47 ± 2	78 ms	Sanchez-Saez et. al. (2020)
FRED	5	47 ± 2	45 ms	Peng et. al. (2010)

Optimized feature extraction routine by Siddharth Chaini and Johann Cohen-Tanugi
Re-factorization and pipeline optimization by Rupesh Durgesh

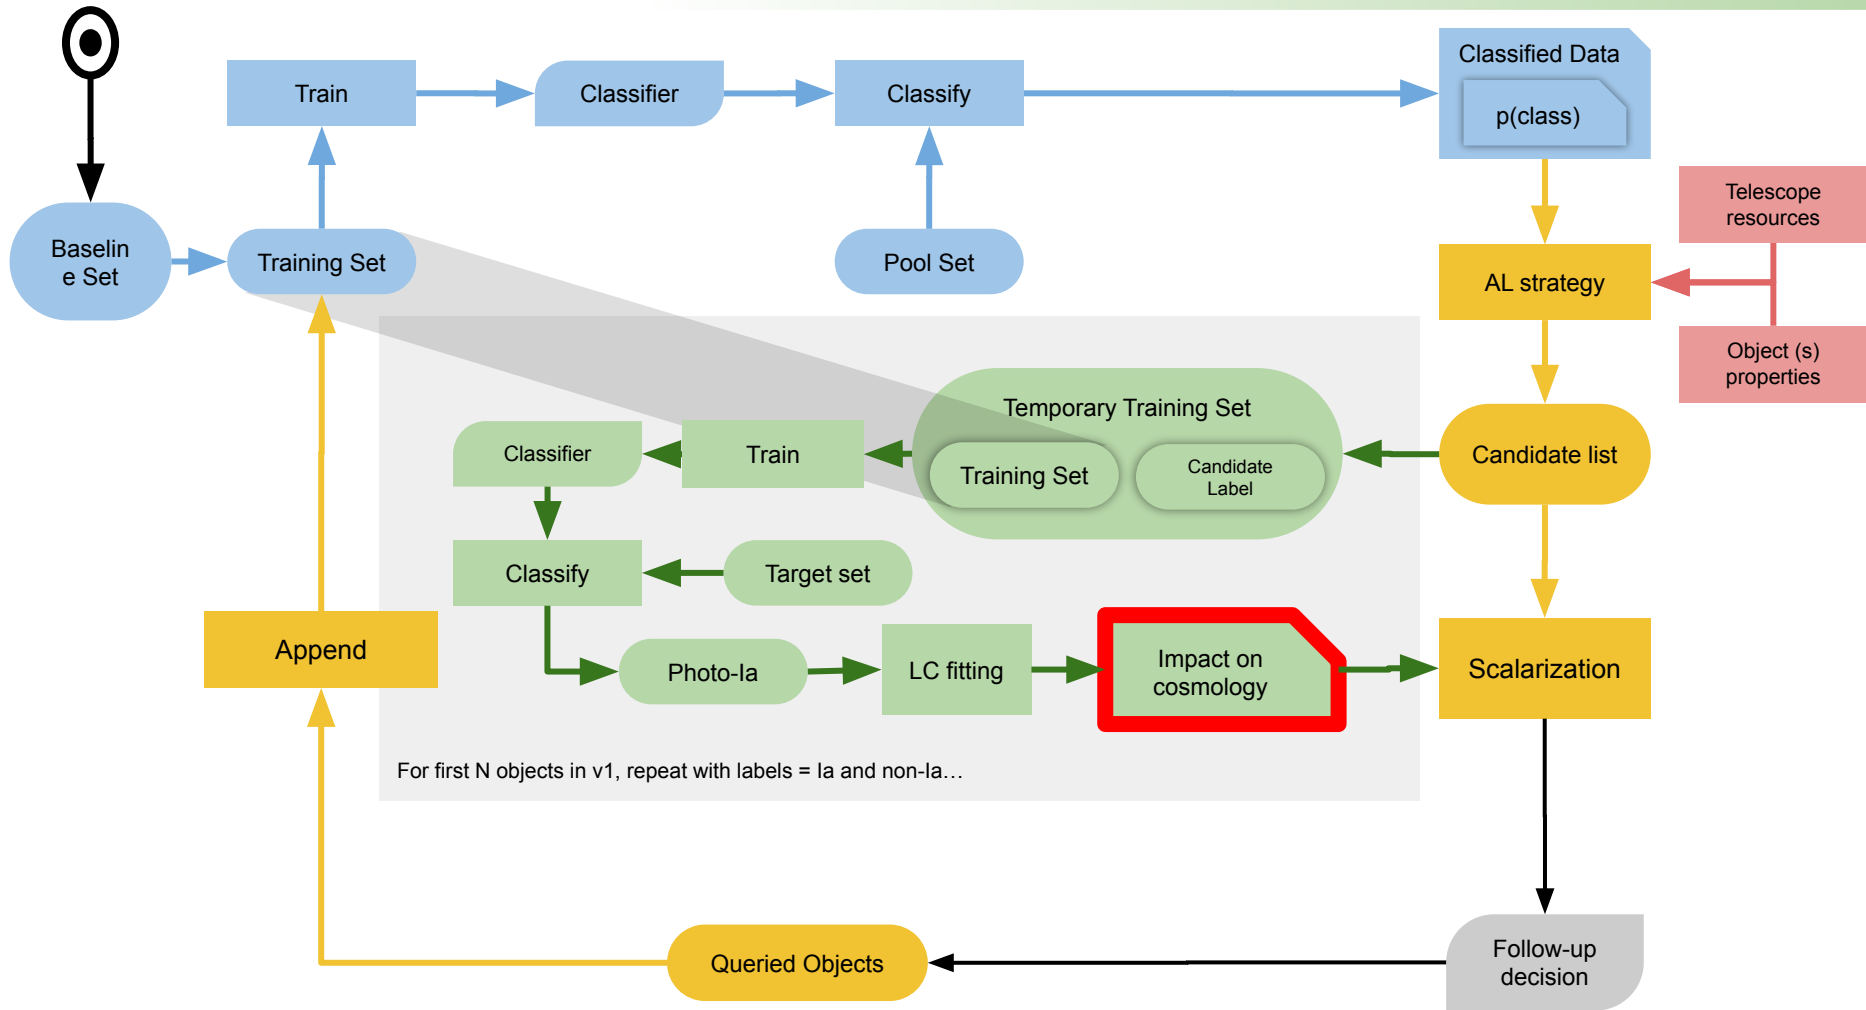

If only it was that simple

Take into account observational caveats

- Window of Opportunity for Labelling
- Evolving Samples
 - We must make query decisions before we can observe the full LC
 - New observations are added for points already in the training sample
- Multiple Instruments
- Evolving Costs
 - Observing costs for a given object changes as it evolves.

+ Cosmological Feedback

Legend

Are classification metrics good proxies for SN Ia cosmological constraining power?

By Alex Malz, Mi Dai and the RESSPECT team

- **Goals:**
 - Evaluate how the impact on cosmology varies with contaminant class
 - Find a suitable metric to evaluate impact on cosmology (**NOT** cosmology result)

Are classification metrics good proxies for SN Ia cosmological constraining power?

By Alex Malz, Mi Dai and the RESSPECT team

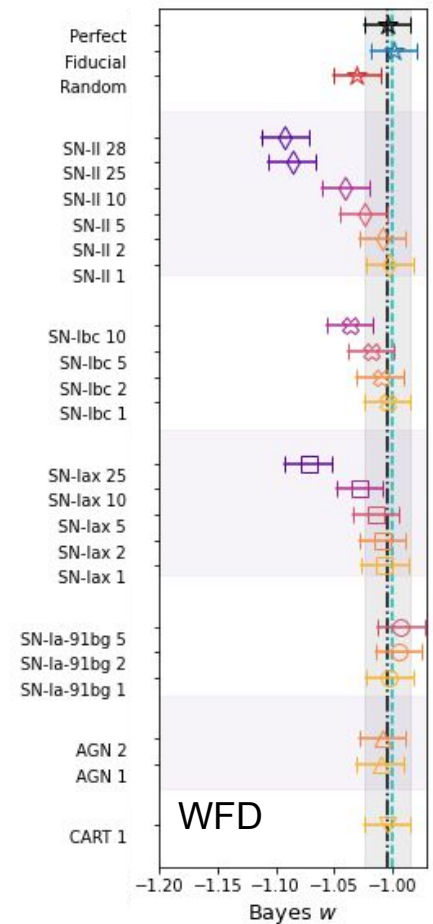

Are classification metrics good proxies for SN Ia cosmological constraining power?

By Alex Malz, Mi Dai and the RESSPECT team

Fiducial corresponds to Avocado classification results

Are classification metrics good proxies for SN Ia cosmological constraining power?

By Alex Malz, Mi Dai and the RESSPECT team

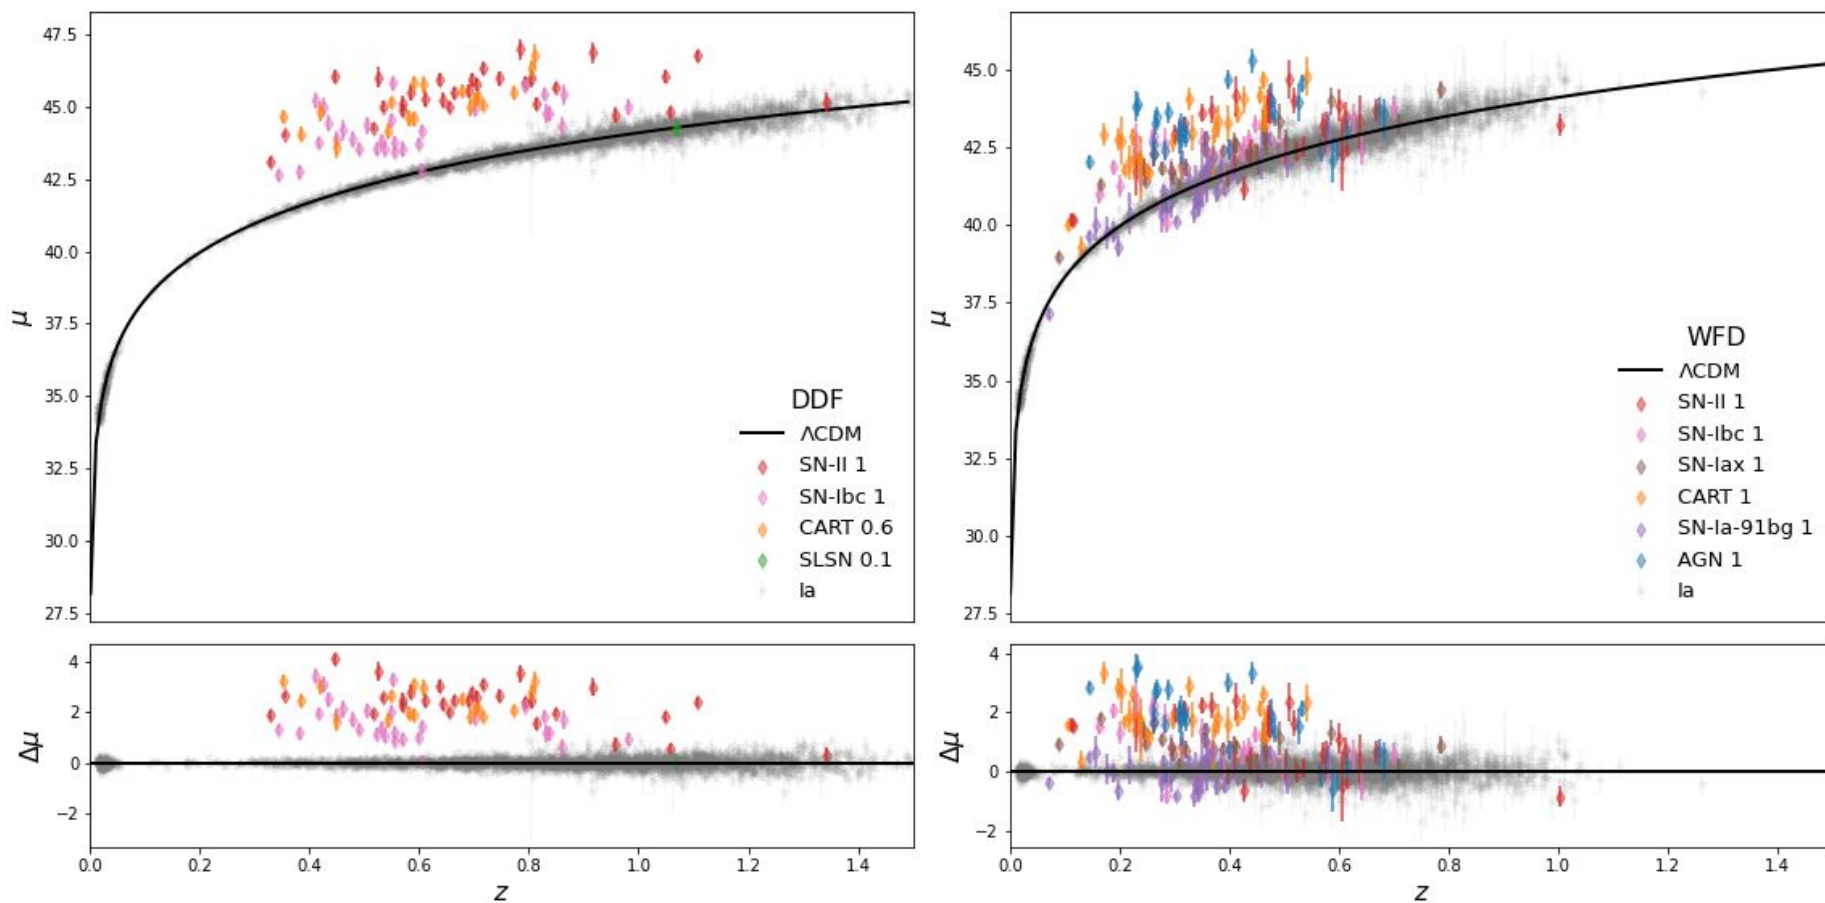

Are classification metrics good proxies for SN Ia cosmological constraining power?

By Alex Malz, Mi Dai and the RESSPECT team

Are classification metrics good proxies for SN Ia cosmological constraining power?

By Alex Malz, Mi Dai and the RESSPECT team

Are classification metrics good proxies for SN Ia cosmological constraining power?

By Alex Malz, Mi Dai and the RESSPECT team

Next steps

- Posterior based metrics for RESSPECT loop
- Cosmology metric and the AL pipeline are now being integrated
- Track the evolution of metrics within active learning loops
- Implement a more flexible telescope time availability
- Metrics paper almost ready for resubmission
- Write the paper and documentation for the pipeline

Alex Malz aimalz@astro.ruhr-uni-bochum.de

Mi Dai: mi.dai@jhu.edu

Magnitude today needed for cost calculation

Included
extrapolation
Given Bazin
Fit.

This is flux,
We need mag

$$f(t) = A \frac{e^{-(t-t_0)/\tau_f}}{1 + e^{(t-t_0)/\tau_r}} + B,$$

Magnitude today needed for cost calculation

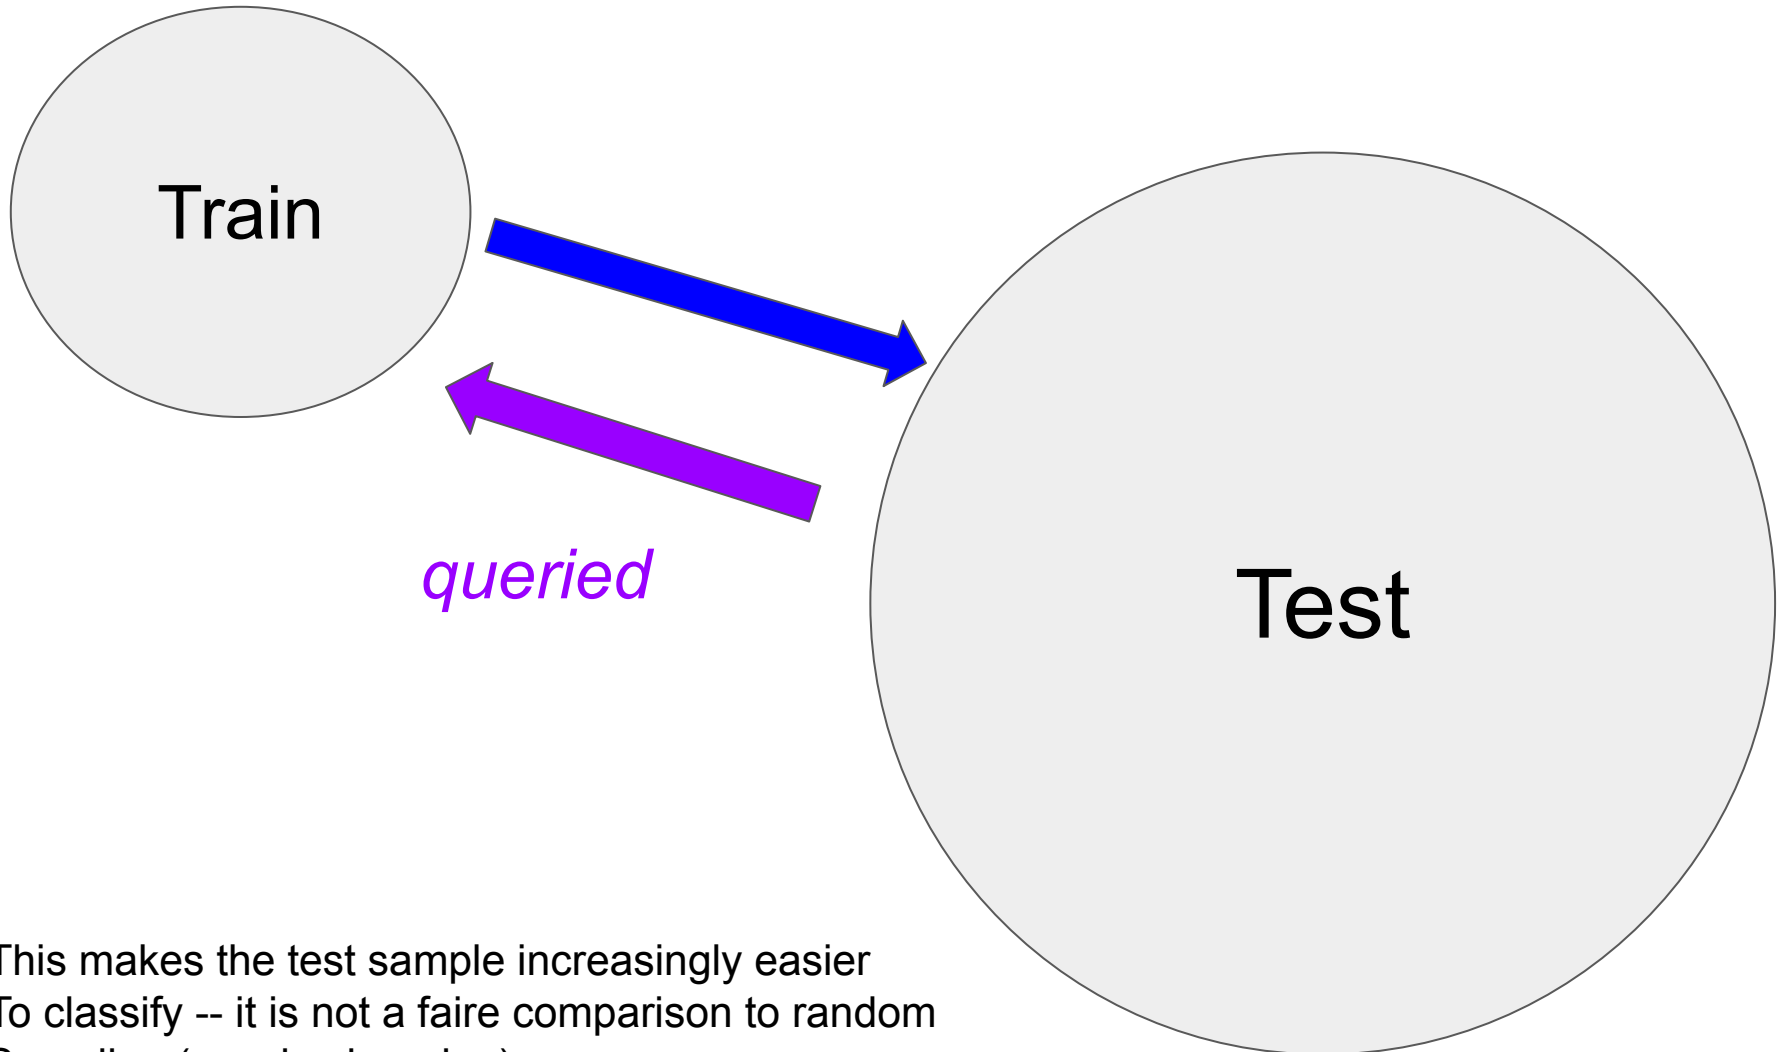

Extrapolation
In mag is now included
In the pipeline

So we get the estimated
Mag today
Given the Bazin fit ...

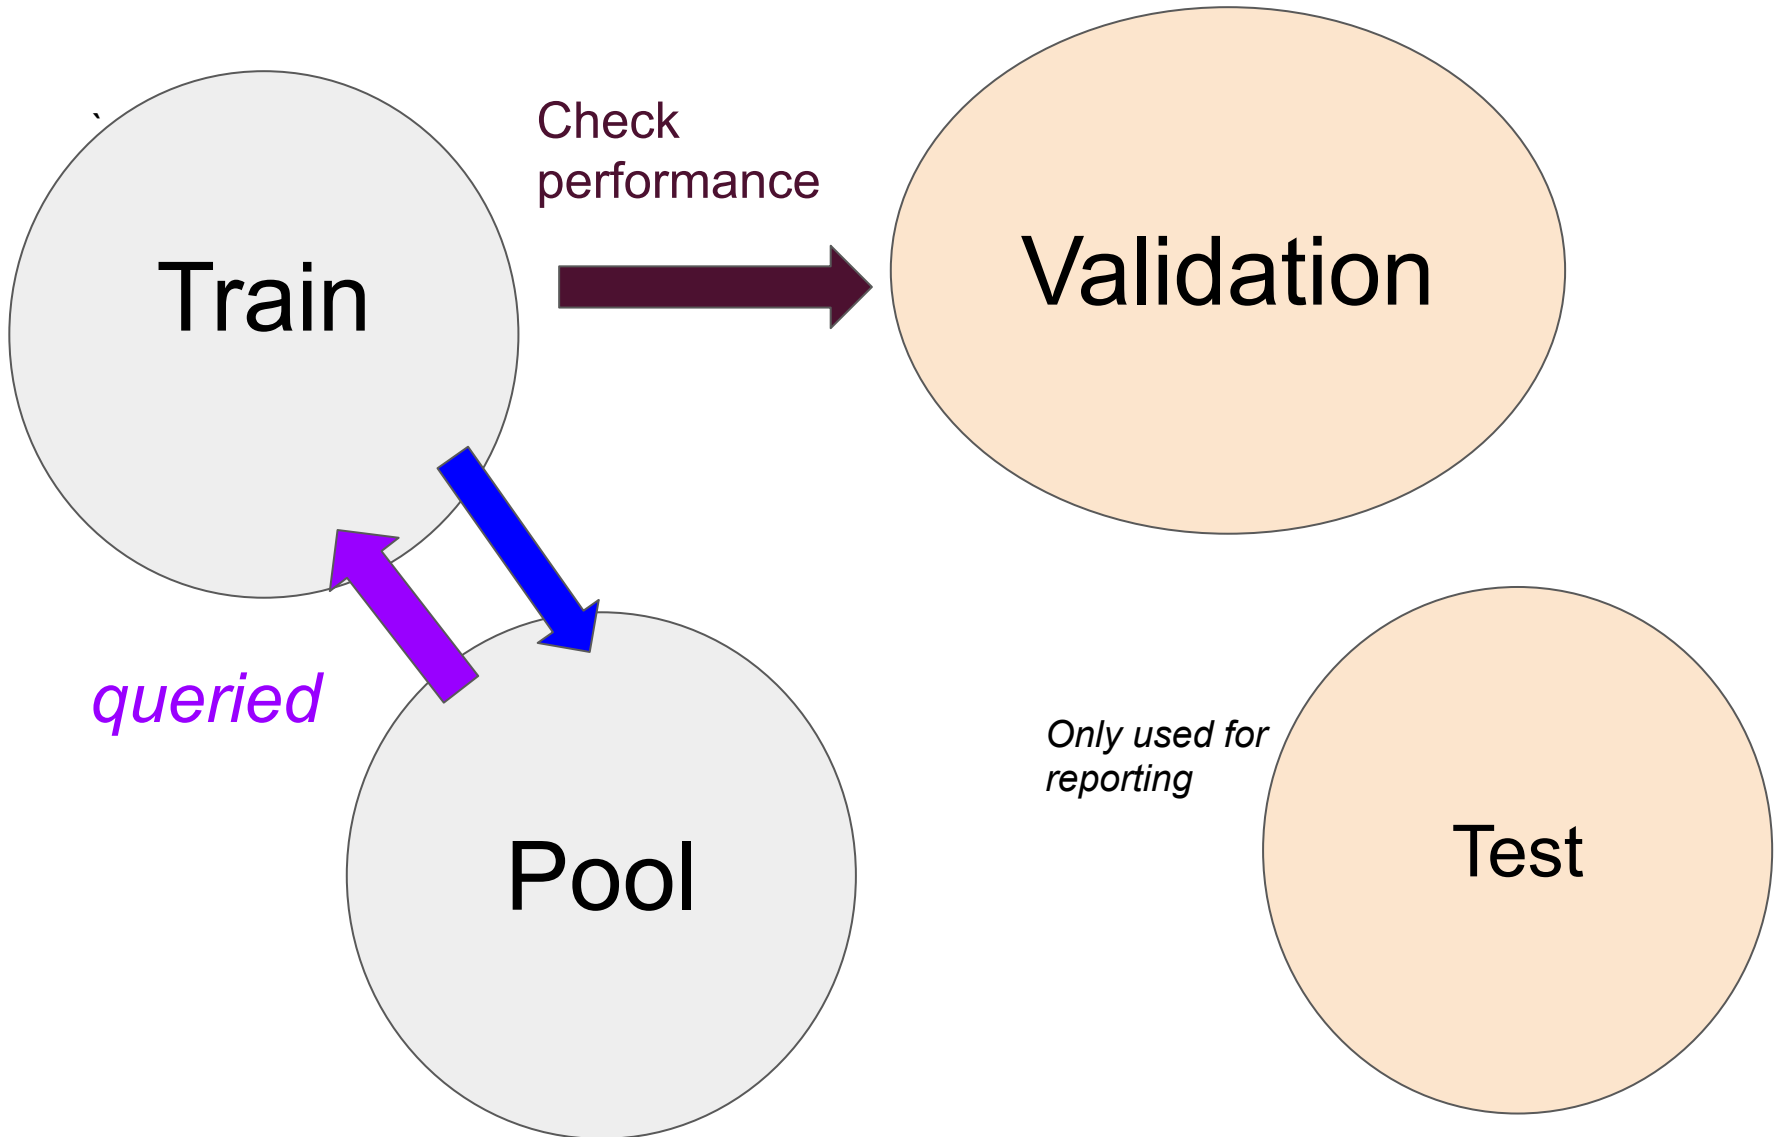

Traditionally ...

Experiment design

This makes the test sample increasingly easier
To classify -- it is not a faire comparison to random
Sampling (passive learning)
