Neutron stars

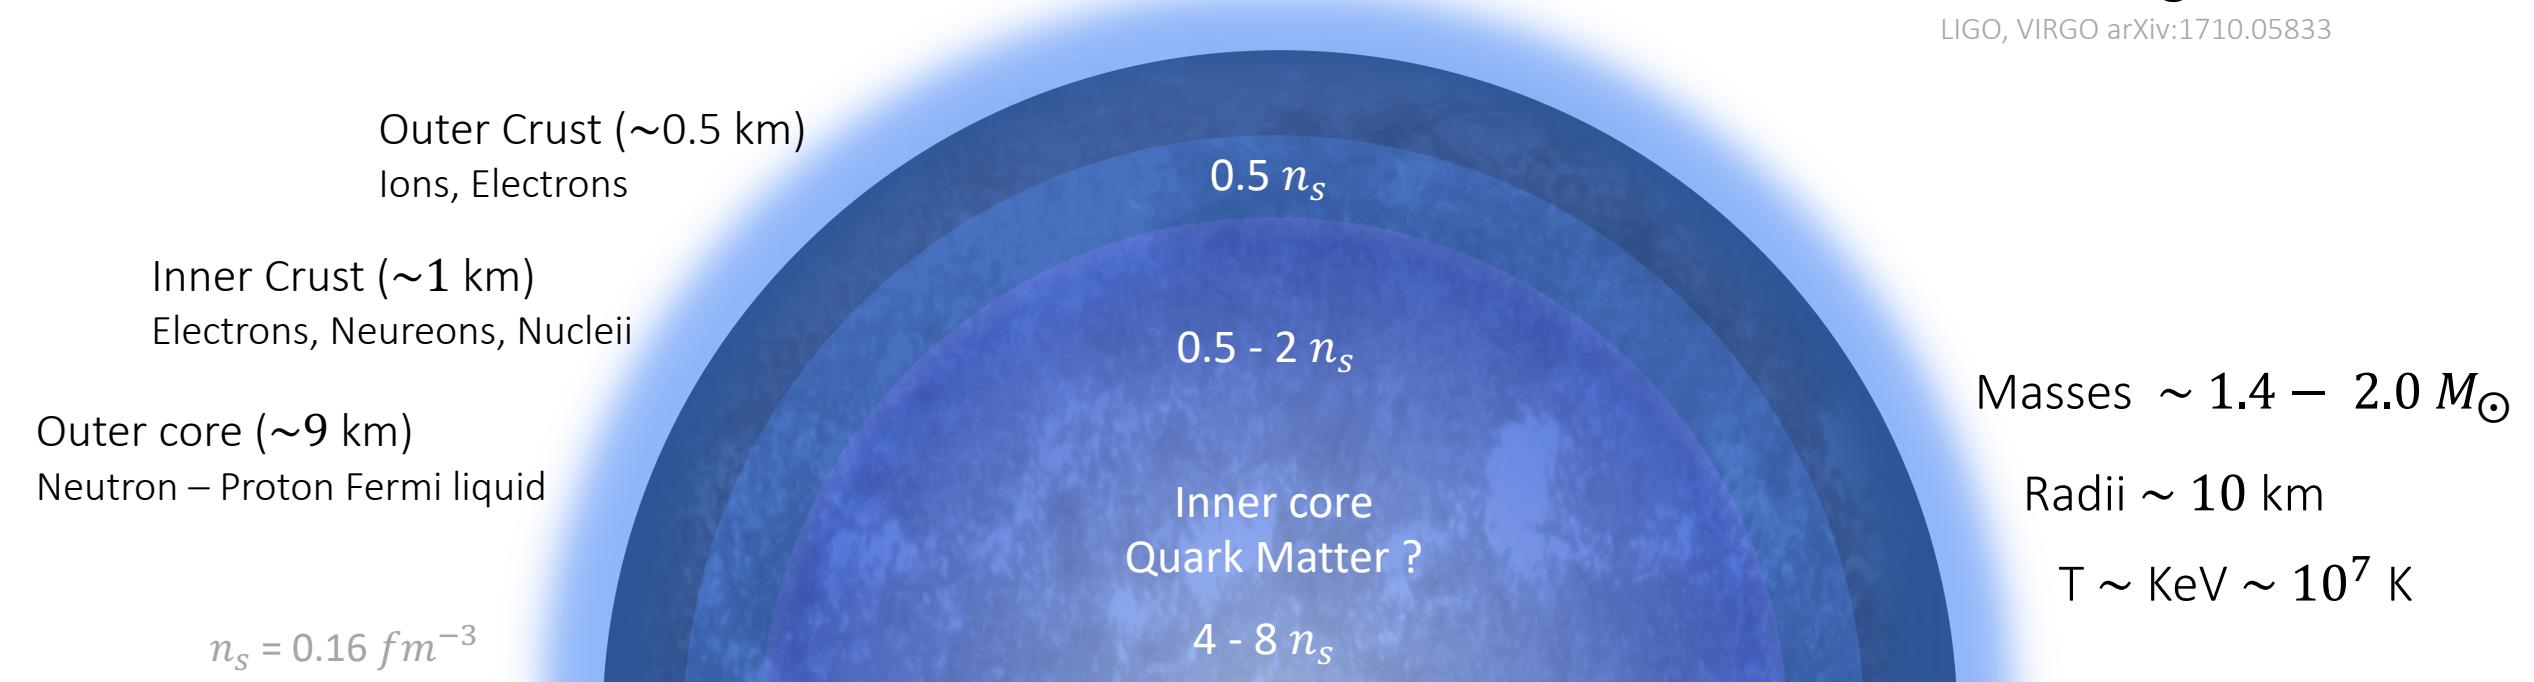

Neutron stars

Neutron stars

- Discovery of massive NSs
Antoniadis, Freire et.al. arXiv:1304.6875
- NS radius measurements
Riley, Watts et.al. arXiv:2105.06980
- Gravitational-wave
LIGO, VIRGO arXiv:1710.05832
- Multi-messenger
LIGO, VIRGO arXiv:1710.05833

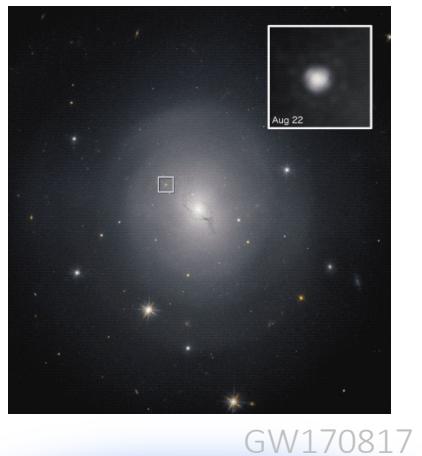

Neutron stars

Tolman–Oppenheimer–Volkoff equation

$$\frac{dp}{dr} = -\frac{Gm}{r^2} \varepsilon \left(1 + \frac{p}{\varepsilon}\right) \left(1 + \frac{4\pi r^3 \varepsilon}{m}\right) \left(1 - \frac{2Gm}{r}\right)^{-1}$$

$$\frac{dm}{dr} = 4\pi r^2 \varepsilon$$

Equation of State $p(\varepsilon)$

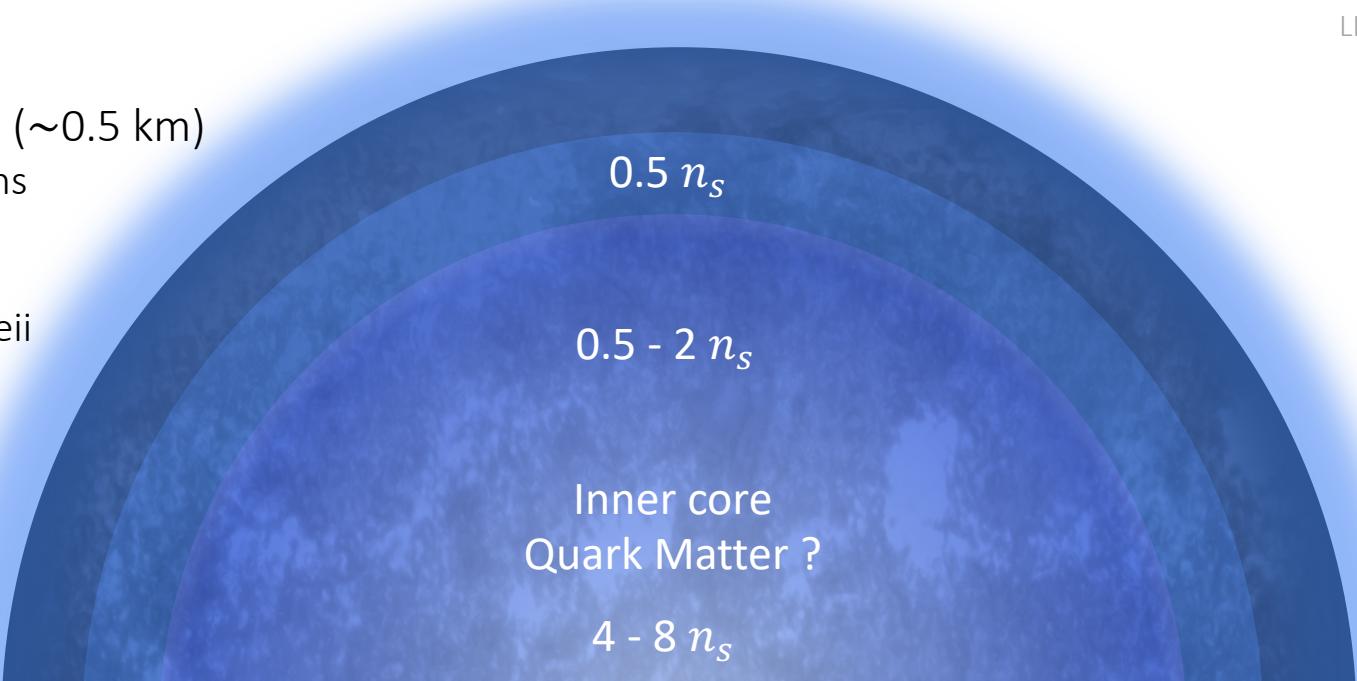

Outer Crust (~ 0.5 km)
Ions, Electrons

Inner Crust (~ 1 km)
Electrons, Neureons, Nucleii

Outer core (~ 9 km)
Neutron – Proton Fermi liquid

$$n_s = 0.16 \text{ fm}^{-3}$$

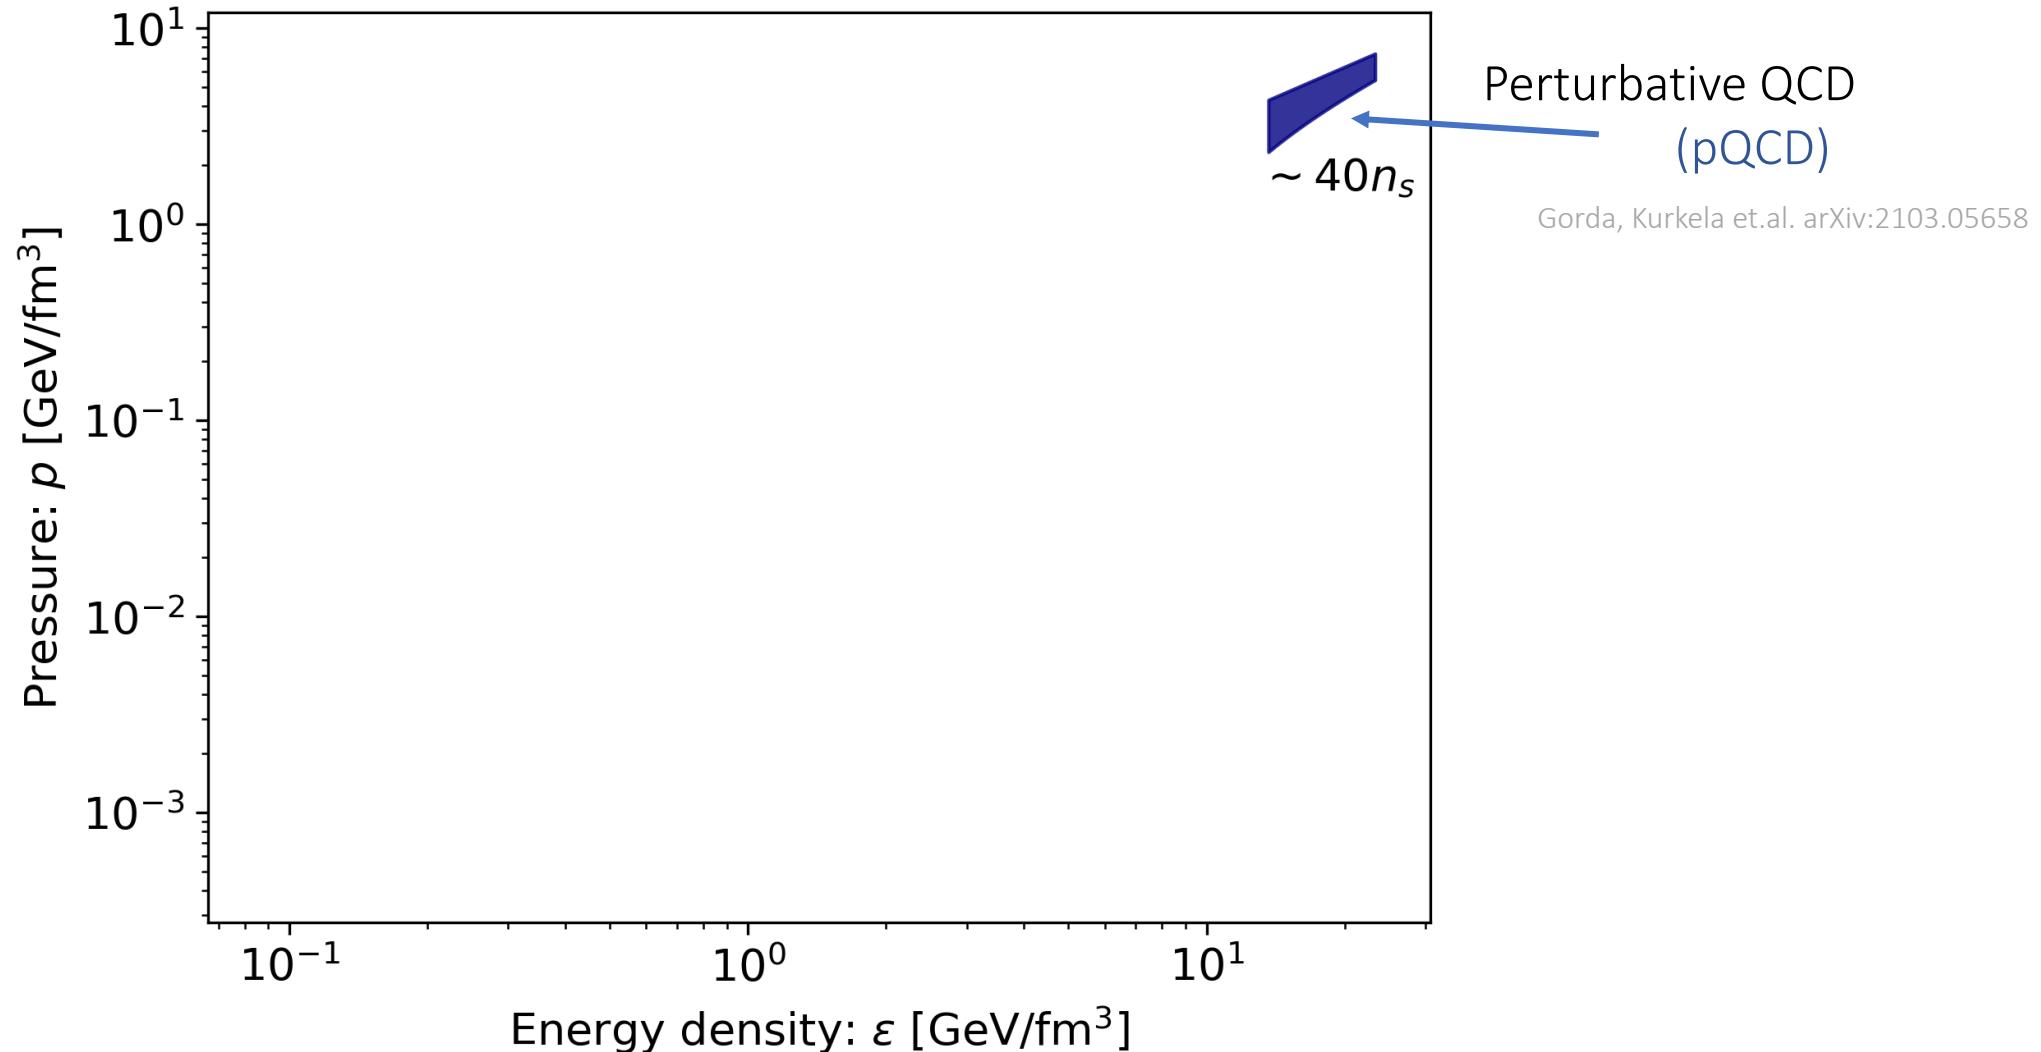

Masses $\sim 1.4 - 2.0 M_\odot$

Radii ~ 10 km

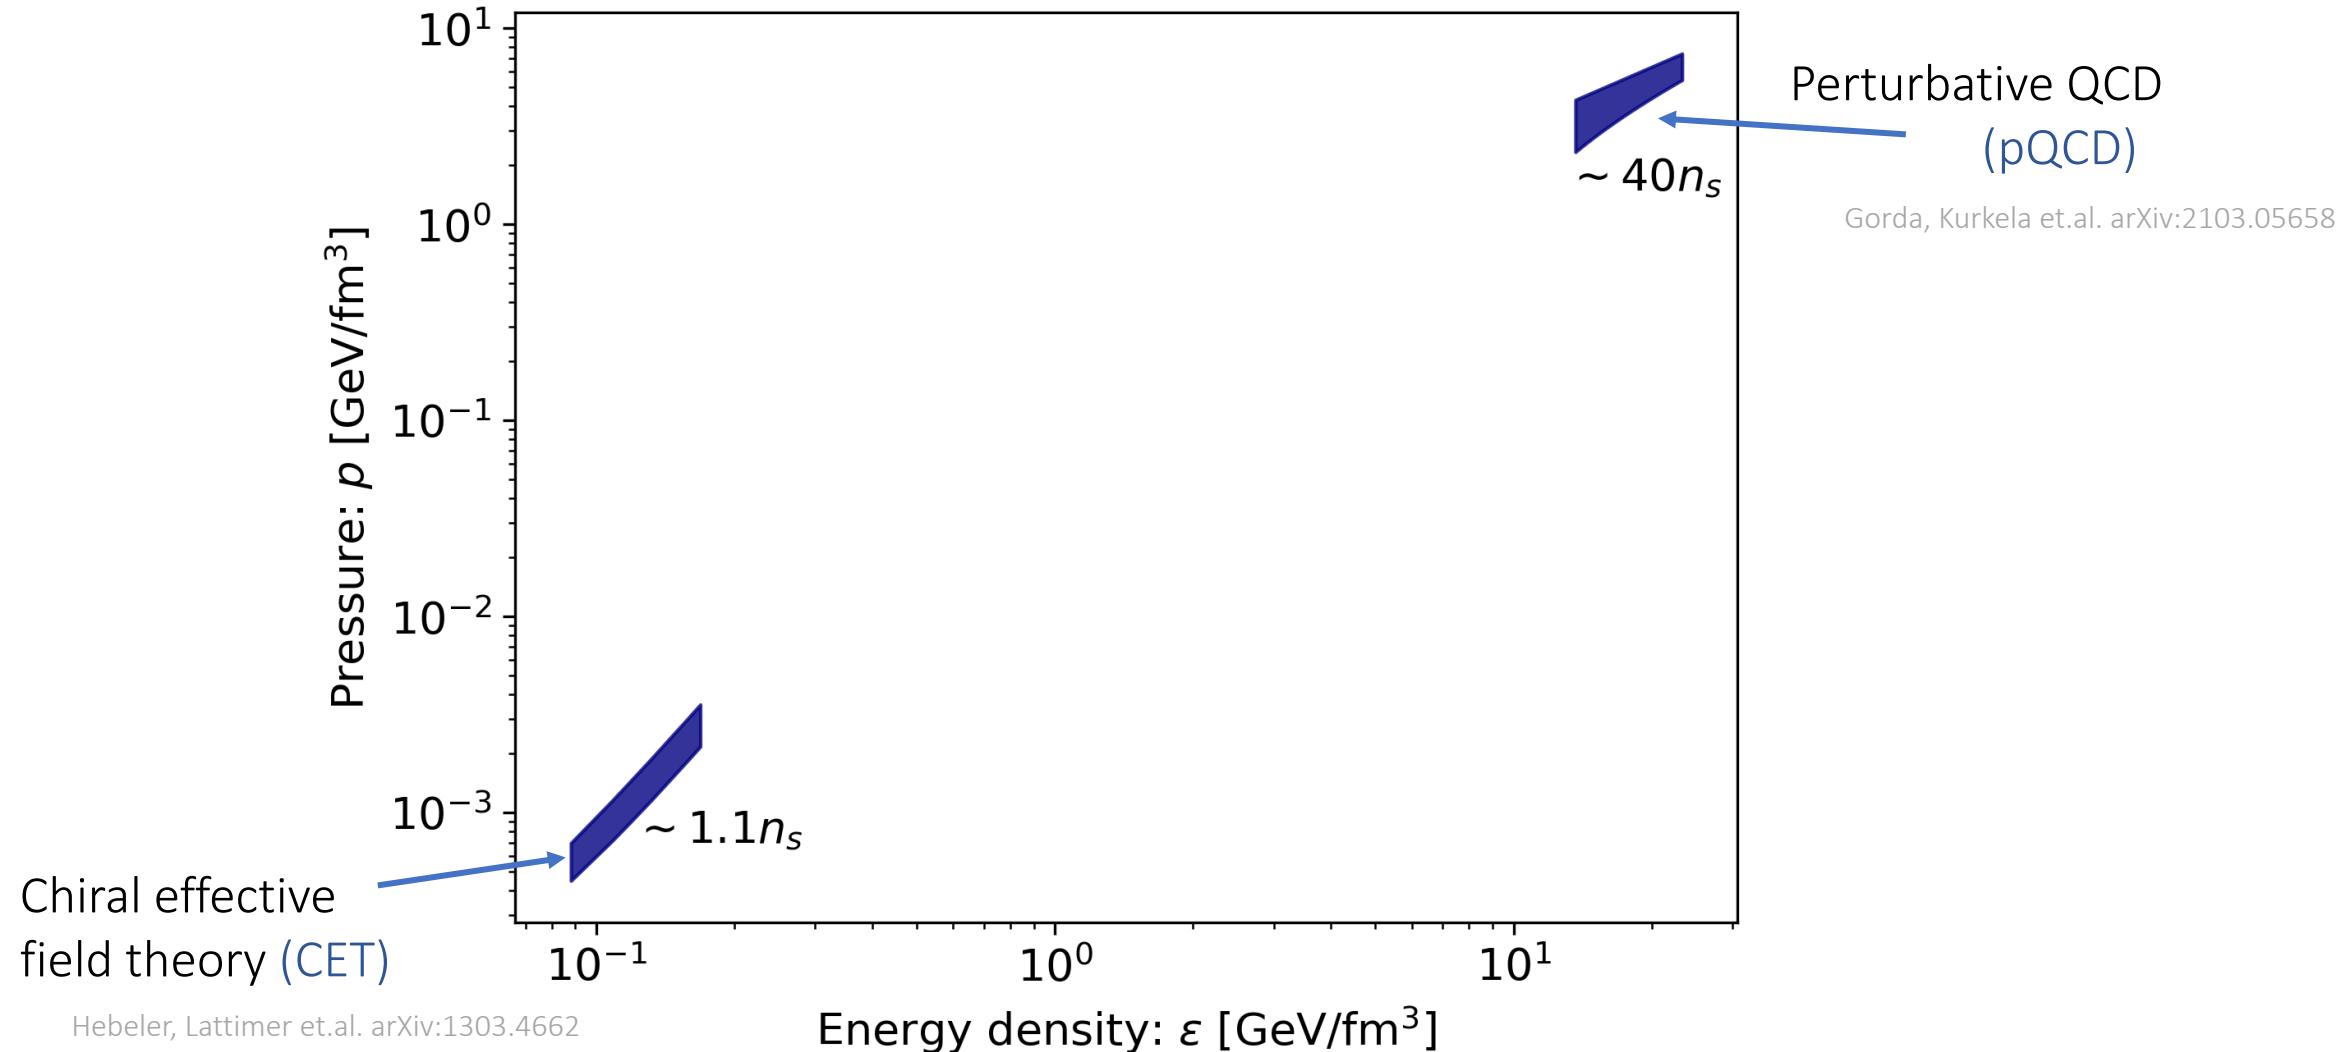

$T \sim \text{KeV} \sim 10^7 \text{ K}$

- Discovery of massive NSs

What do we know about cold and dense EoS?

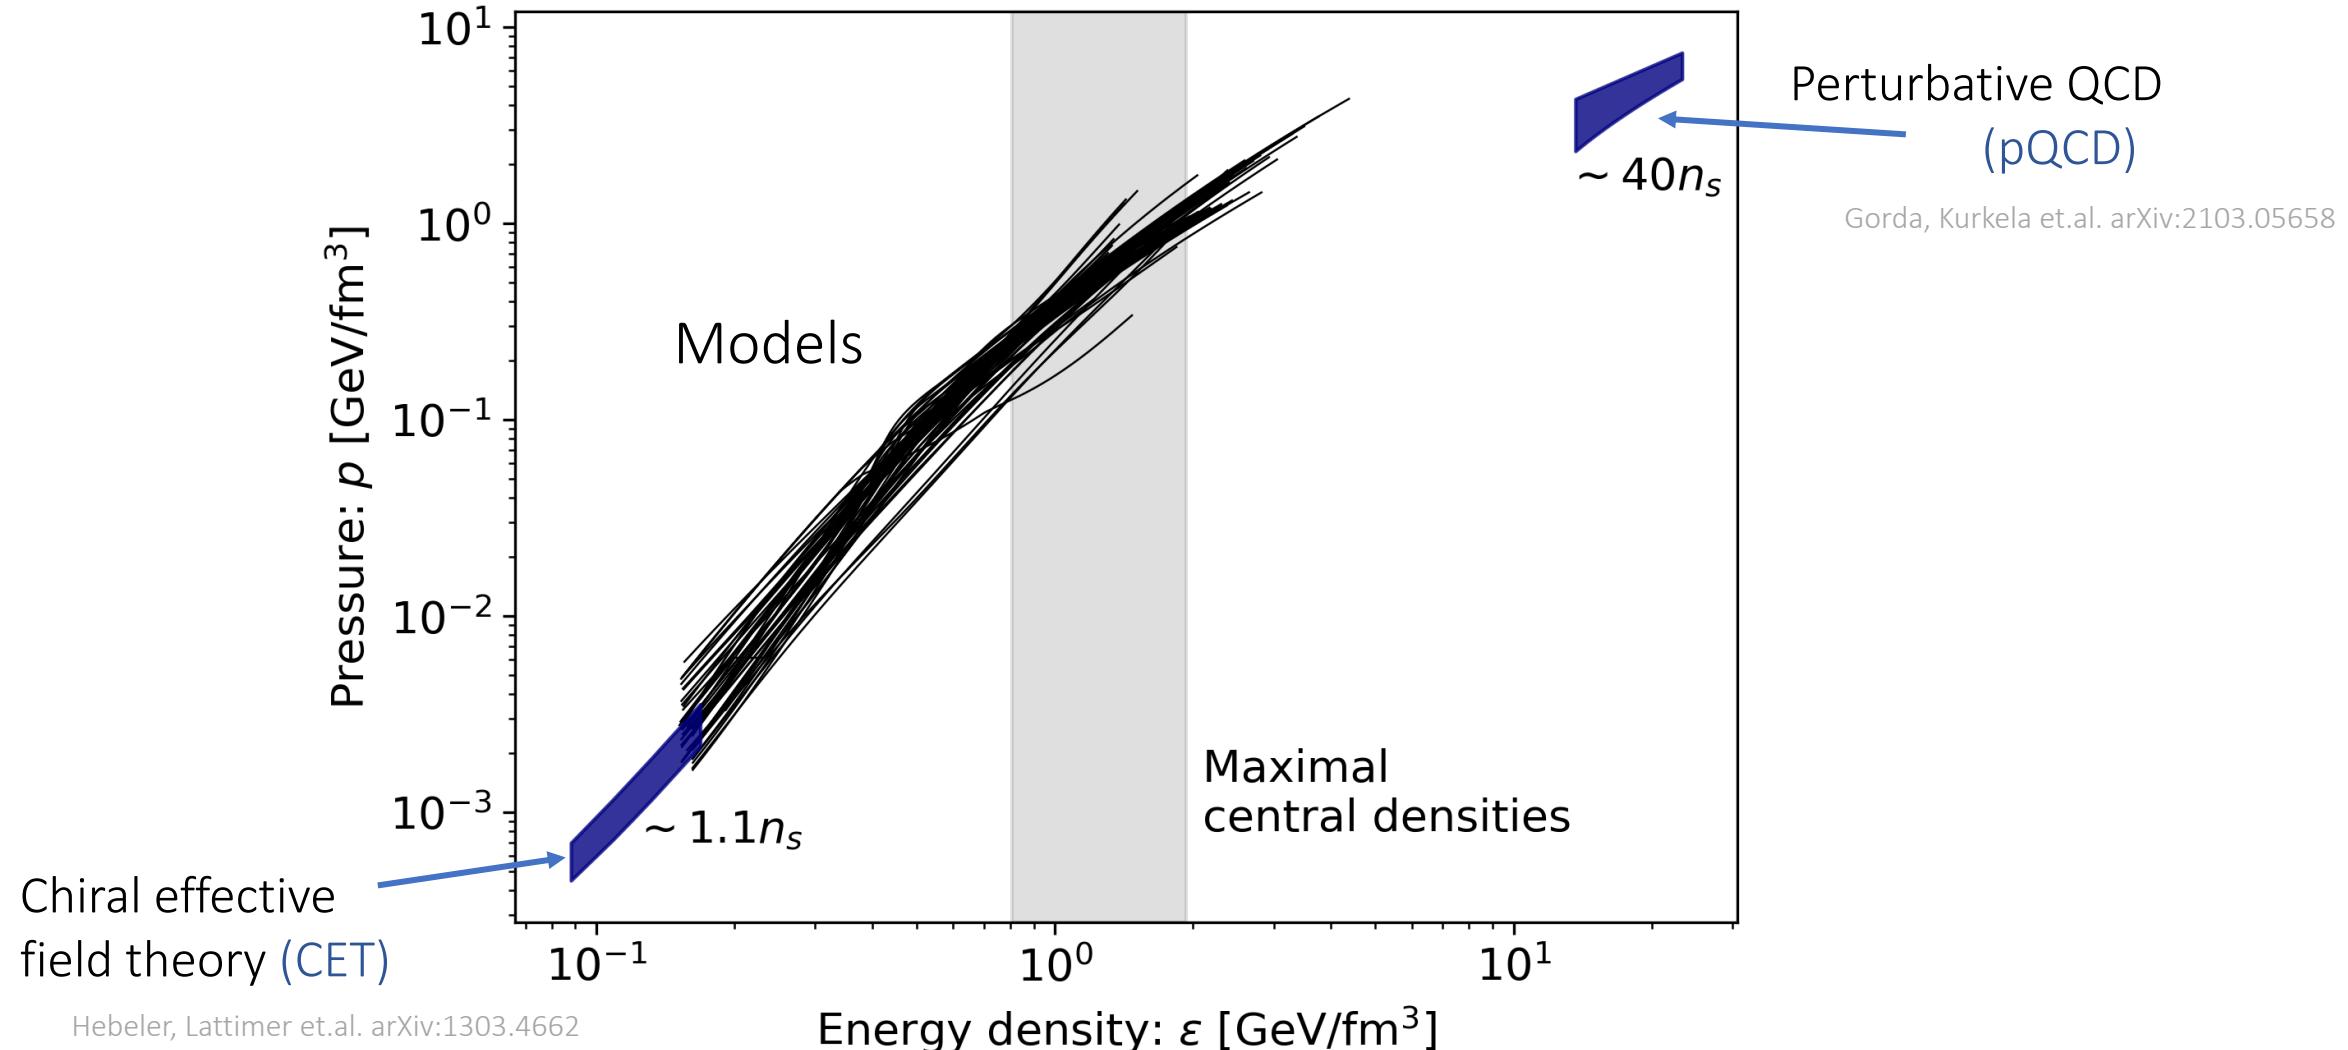

What do we know about cold and dense EoS?

Interpolation of EoS

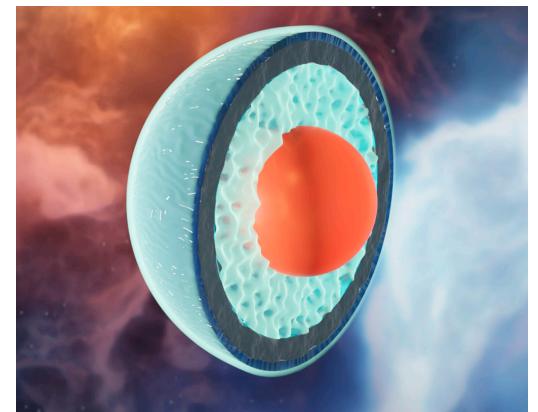

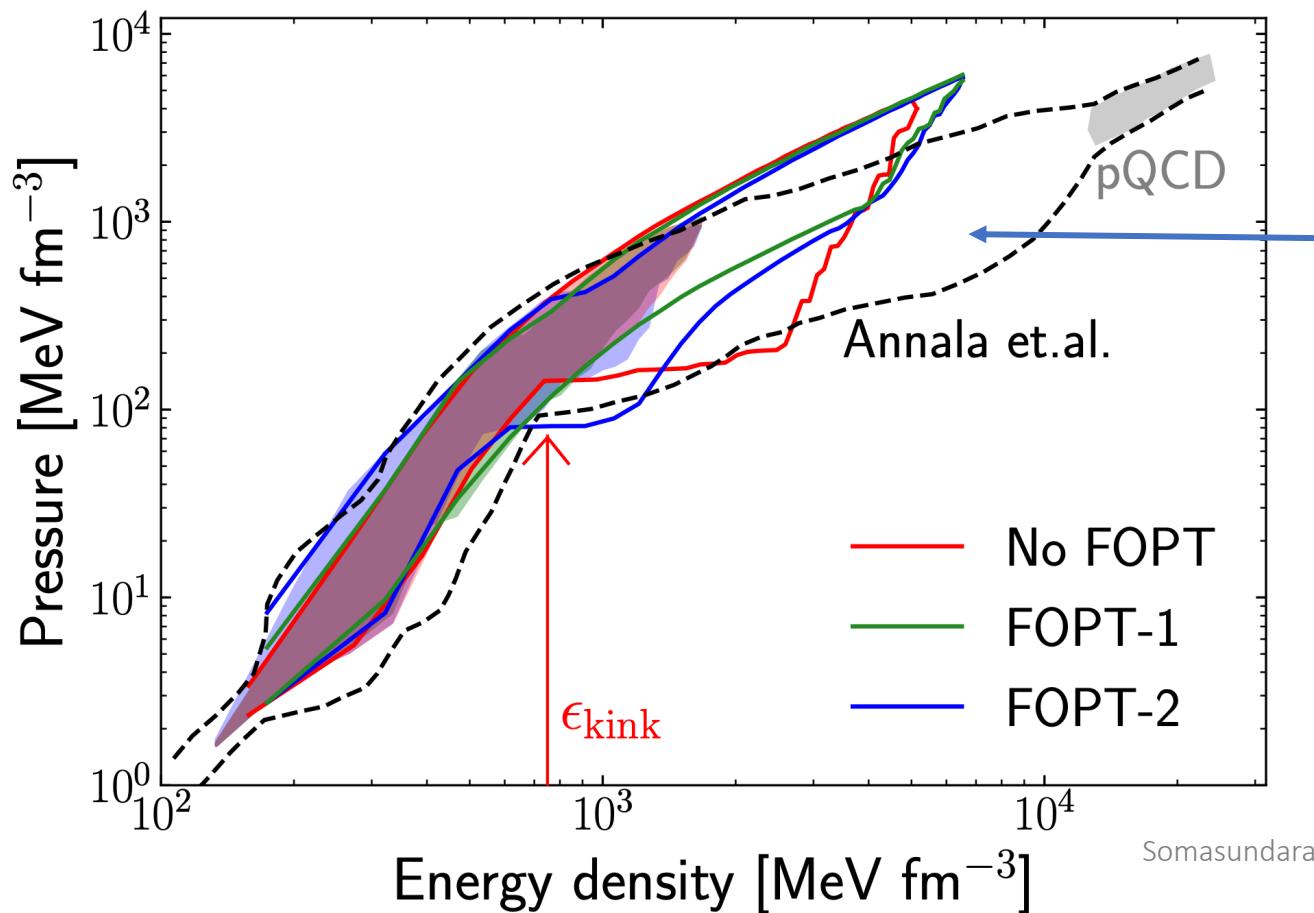

Somasundaram, Tews, Margueron arXiv:2112.08157

Interpolation of EoS

- Is pQCD relevant for NS densities ?

Interpolation of EoS

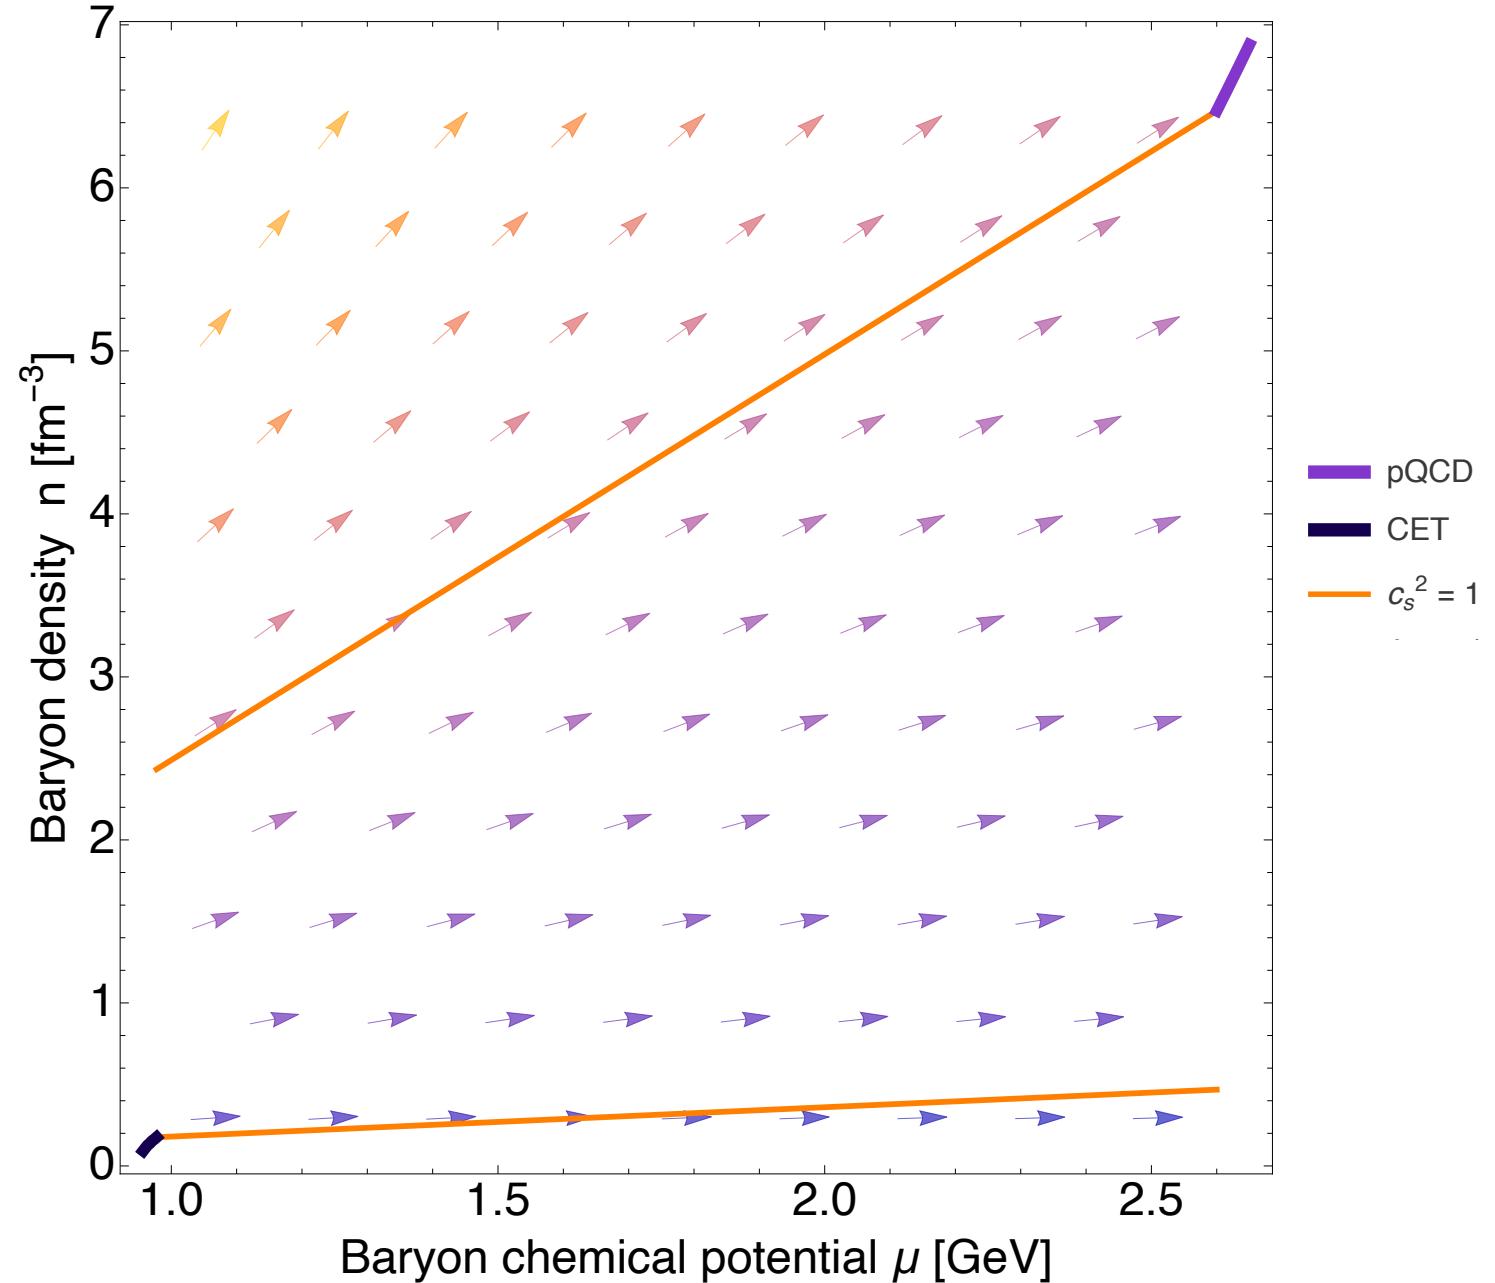

Annala et.al. Nat. Phys. 16, 907–910 (2020)

Somasundaram, Tews, Margueron arXiv:2112.08157

- Is pQCD relevant for NS densities ?
- Is softening of the EoS happening due to the choice of interpolation function ?

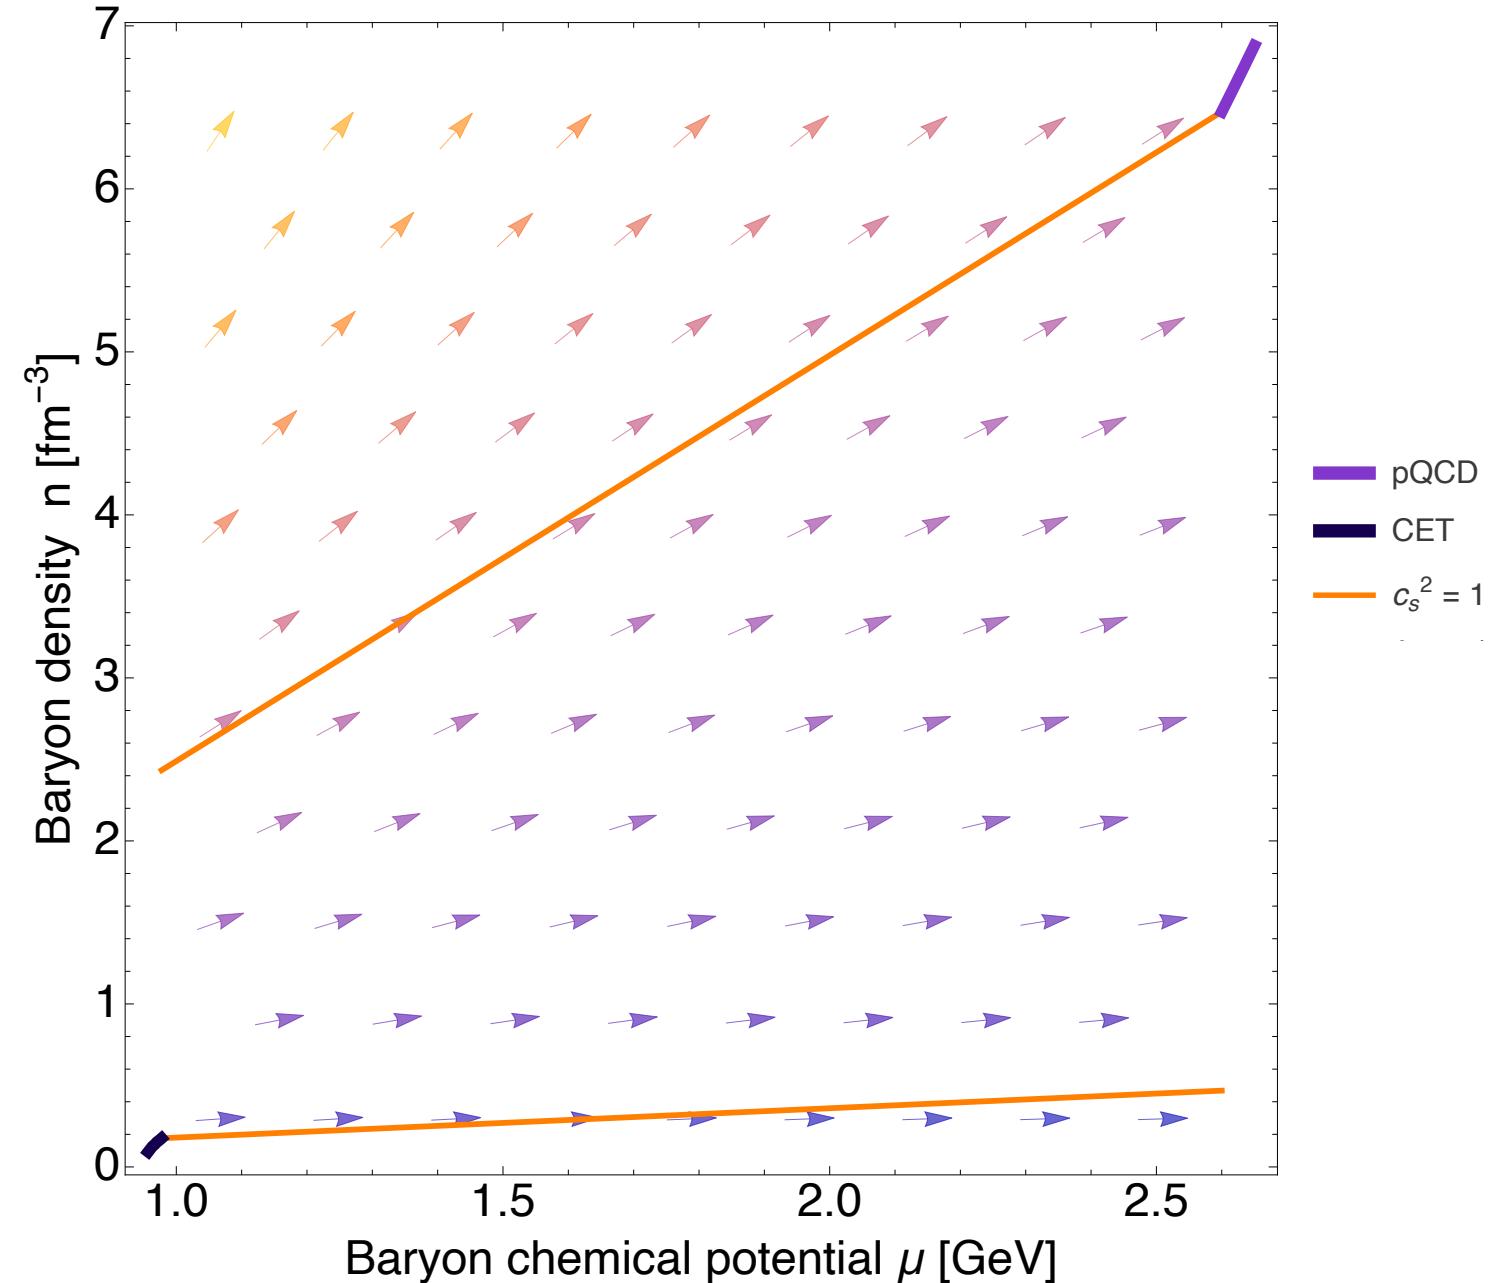

Setup

Setup

- Stability

$$\partial_\mu^2 \Omega(\mu) \leq 0 \quad \Rightarrow \quad \partial_\mu n(\mu) \geq 0$$

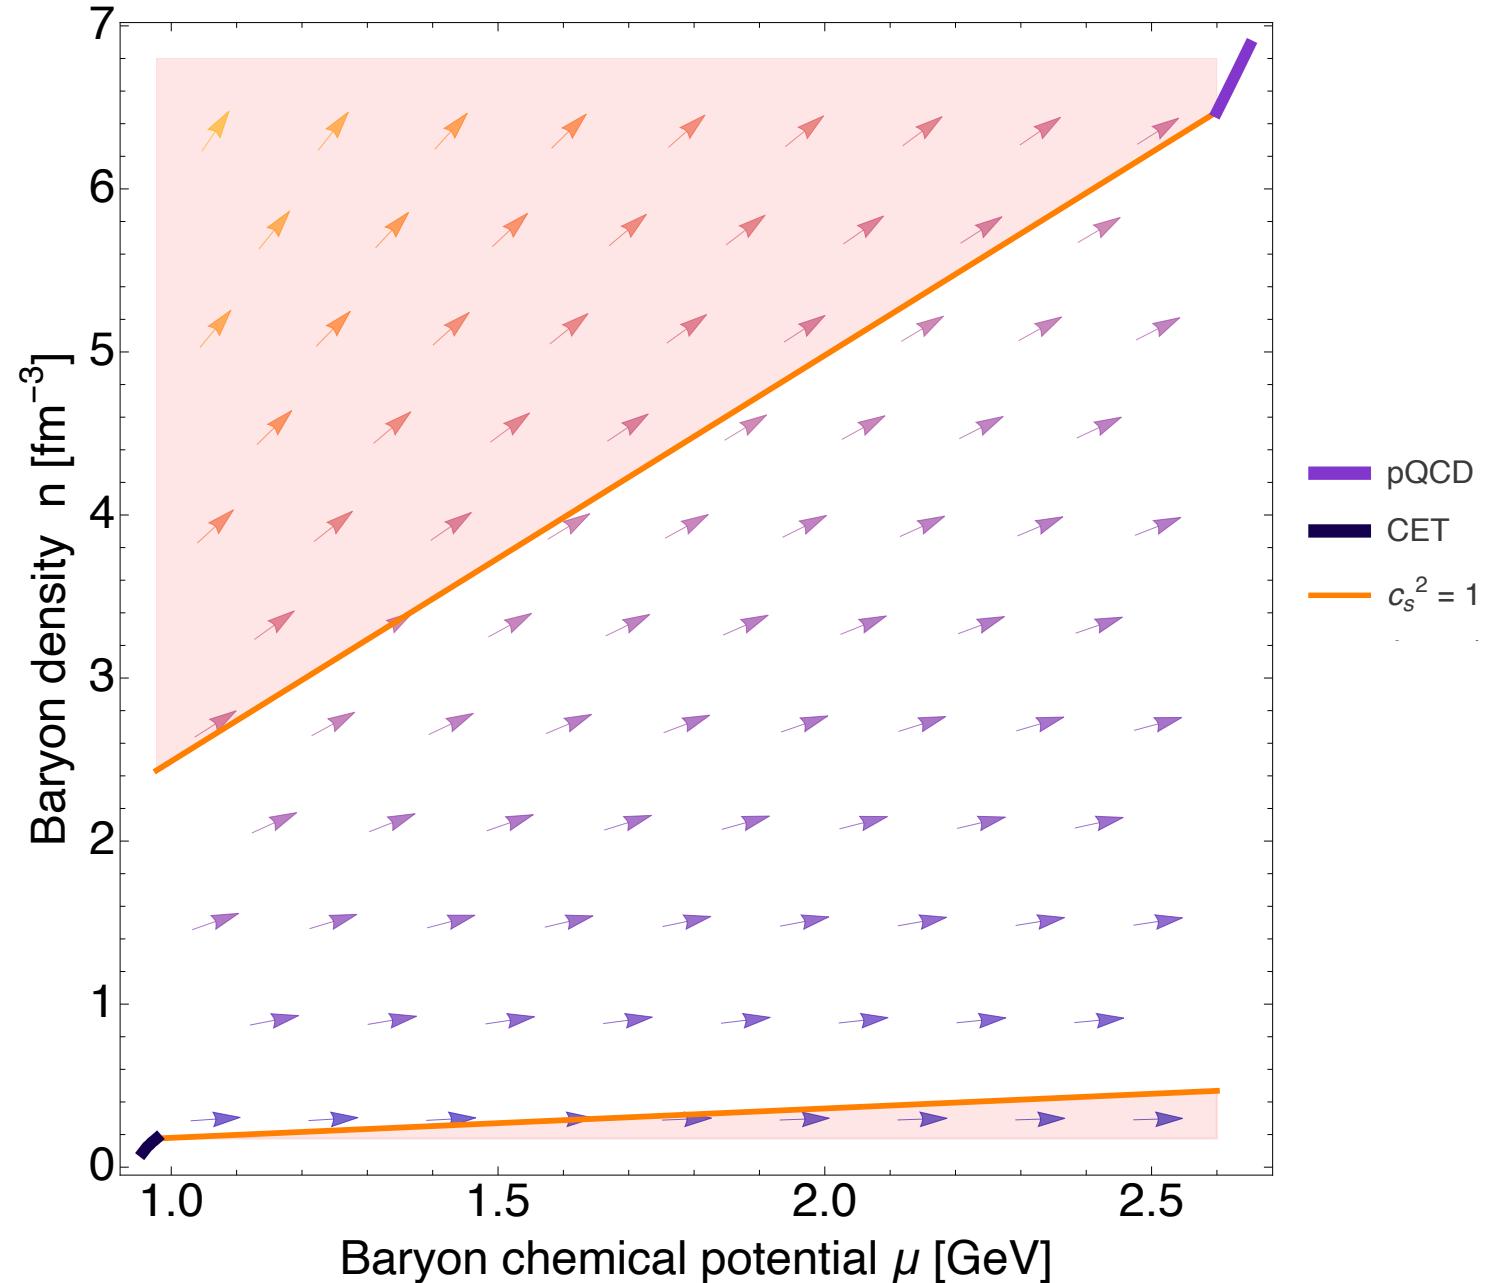

Setup

- Stability

$$\partial_\mu^2 \Omega(\mu) \leq 0 \Rightarrow \partial_\mu n(\mu) \geq 0$$

- Causality

$$c_s^{-2} = \frac{\mu \partial n}{n \partial \mu} \geq 1 \Rightarrow \partial_\mu n(\mu) \geq \frac{n}{\mu}$$

Setup

- Stability

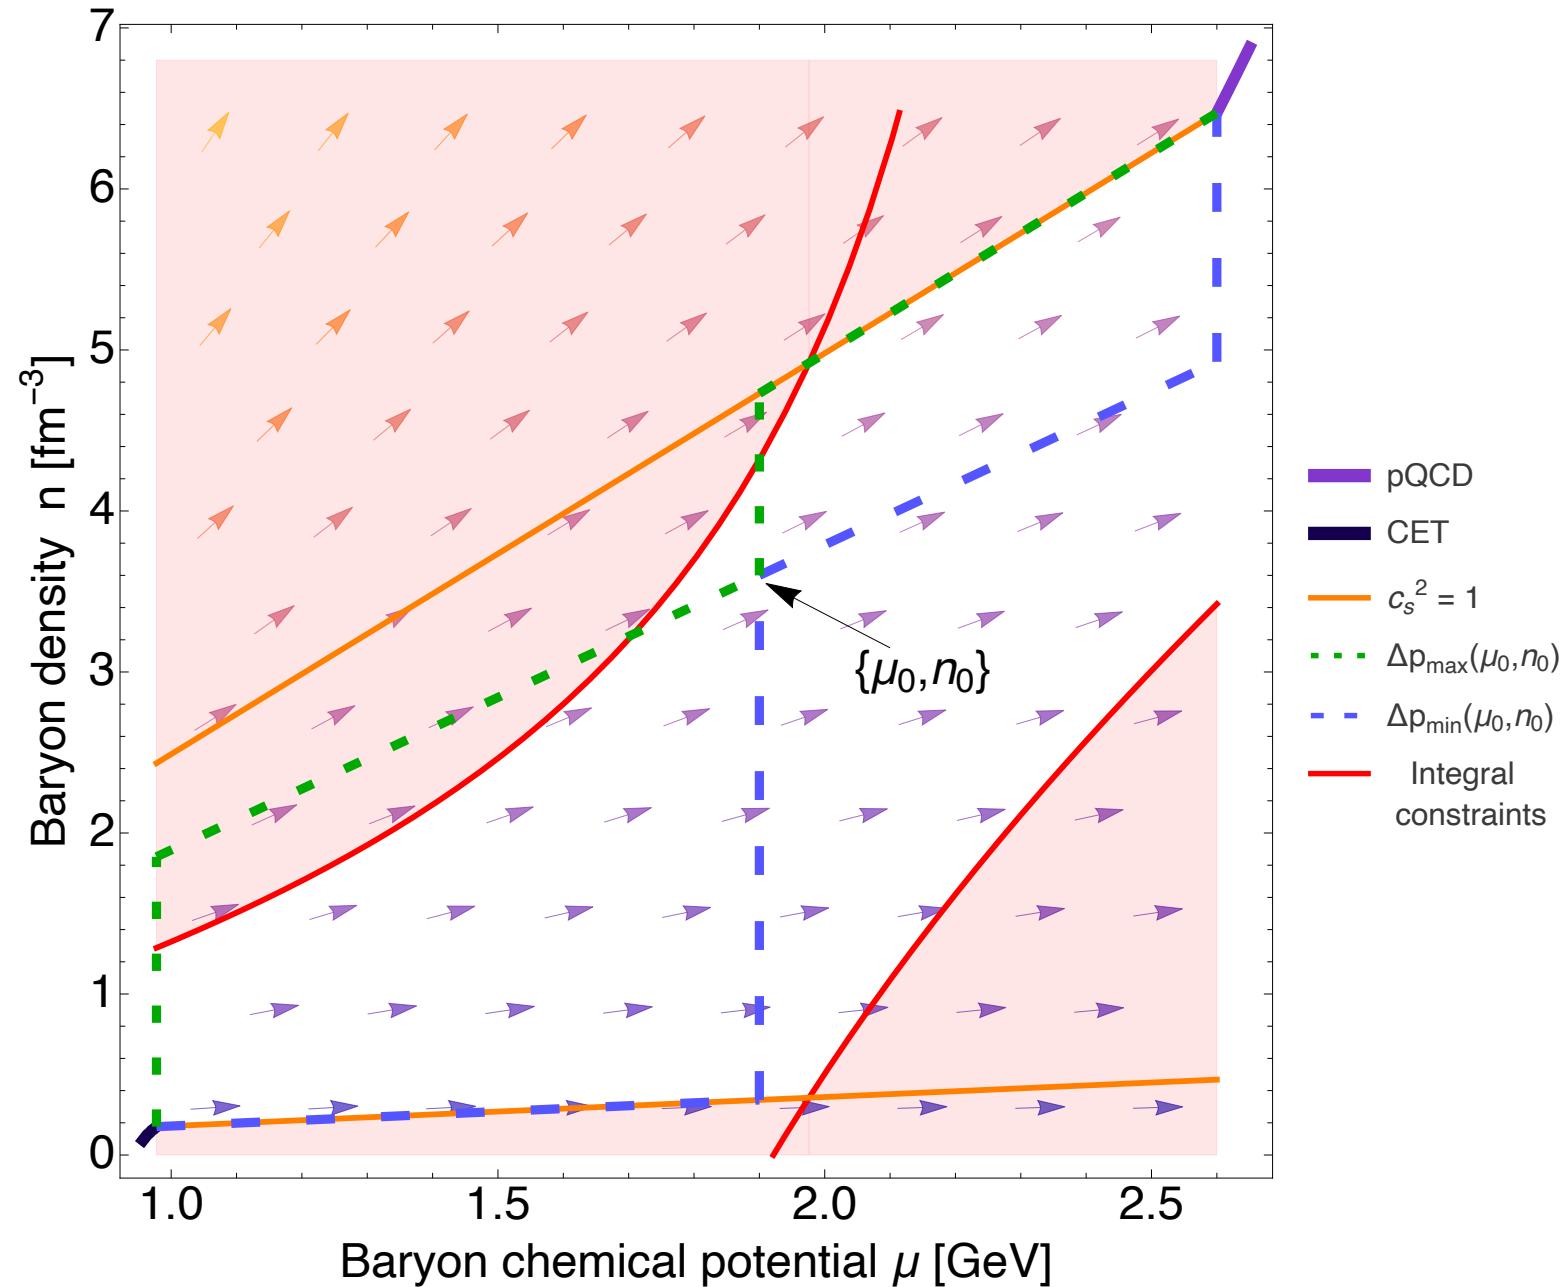

$$\partial_\mu^2 \Omega(\mu) \leq 0 \Rightarrow \partial_\mu n(\mu) \geq 0$$

- Causality

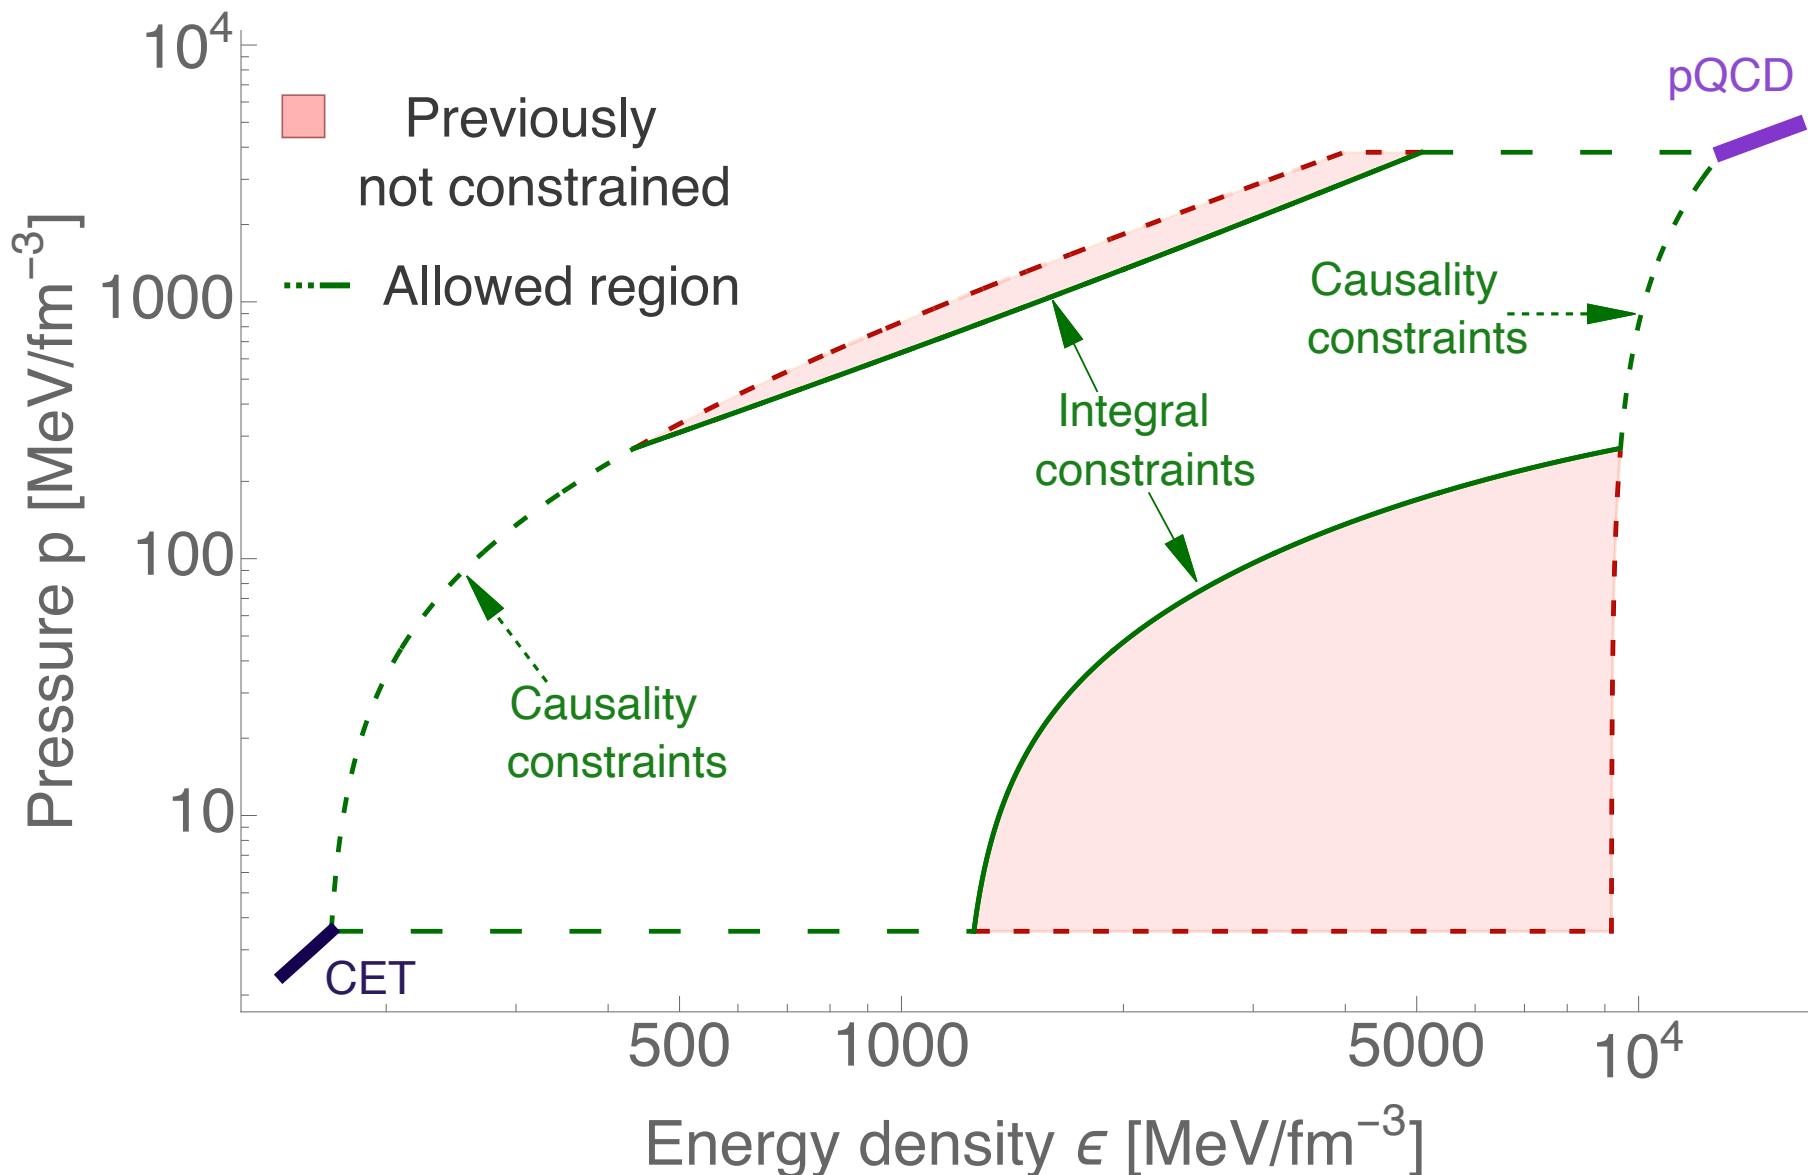

$$c_s^{-2} = \frac{\mu \partial n}{n \partial \mu} \geq 1 \Rightarrow \partial_\mu n(\mu) \geq \frac{n}{\mu}$$

- Consistency

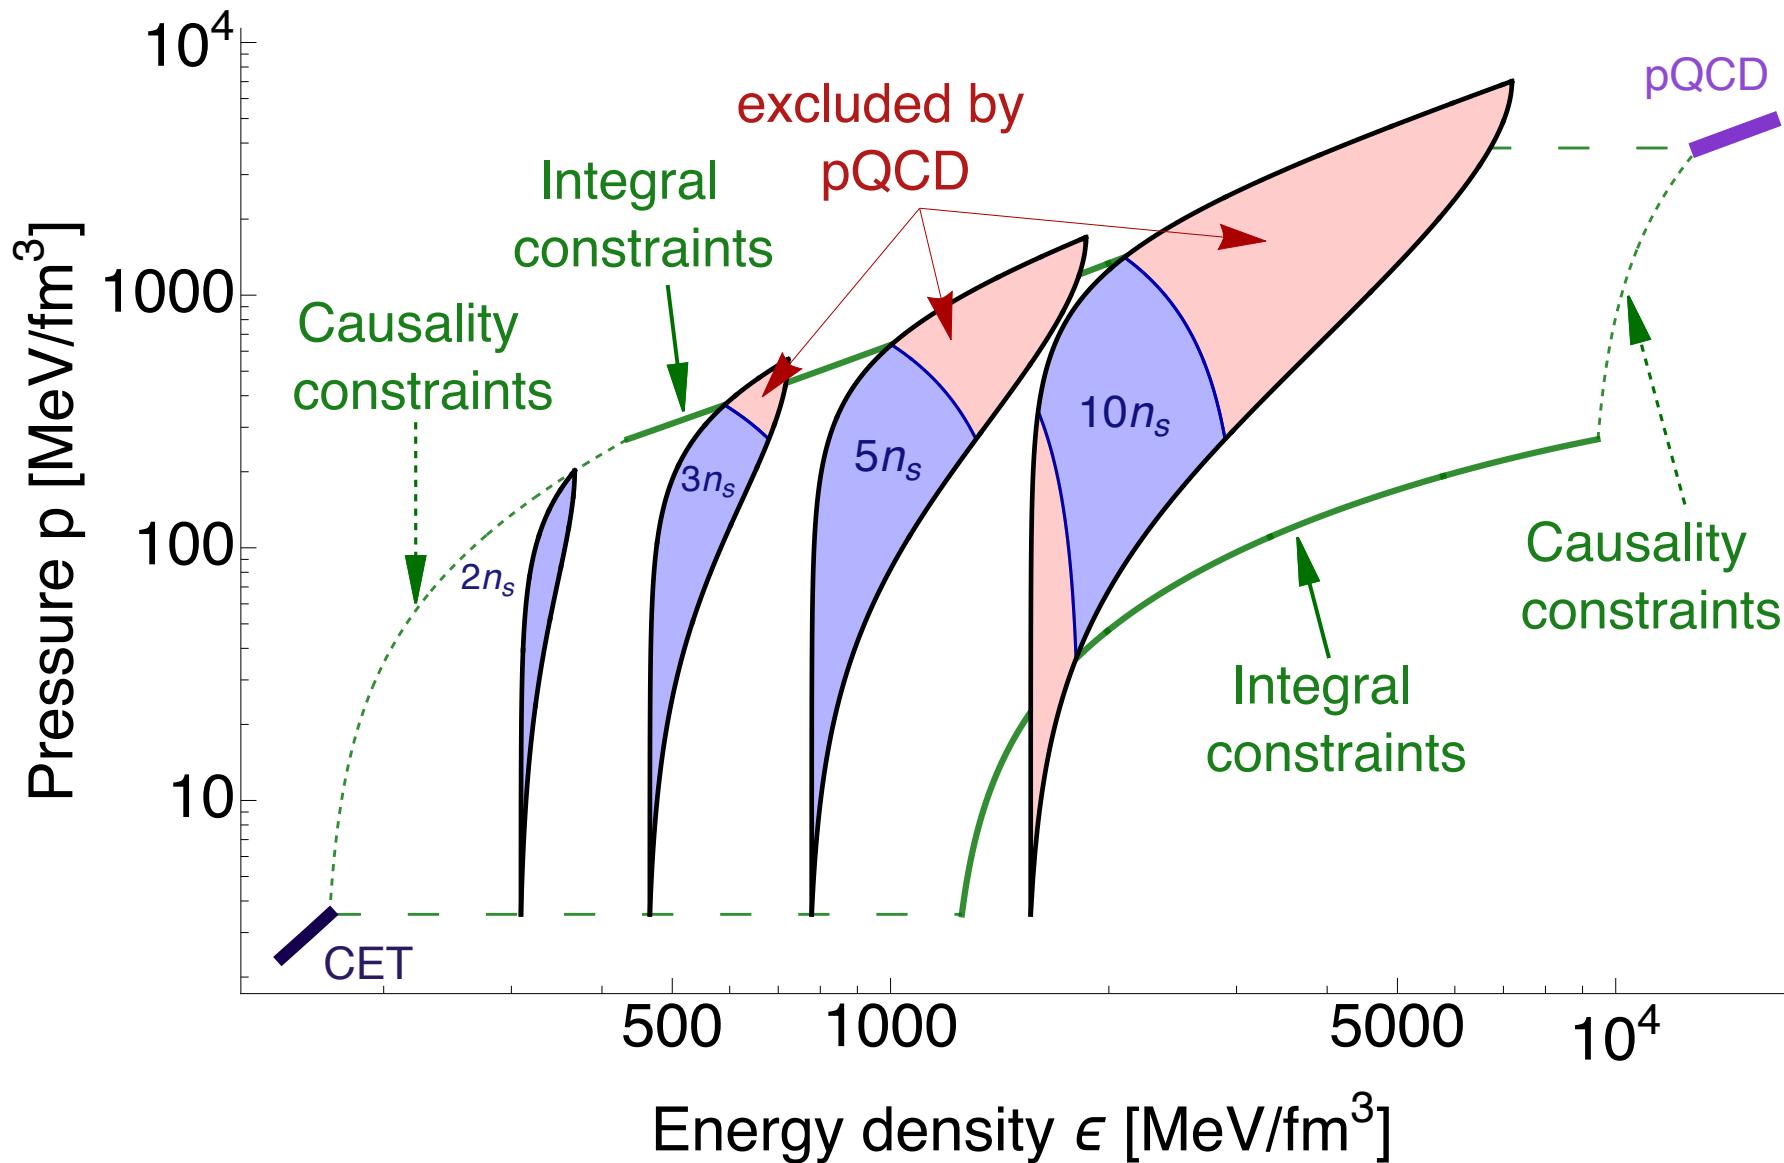

$$\int_{\mu_{CET}}^{\mu_{QCD}} n(\mu) d\mu = p_{QCD} - p_{CET} = \Delta p$$

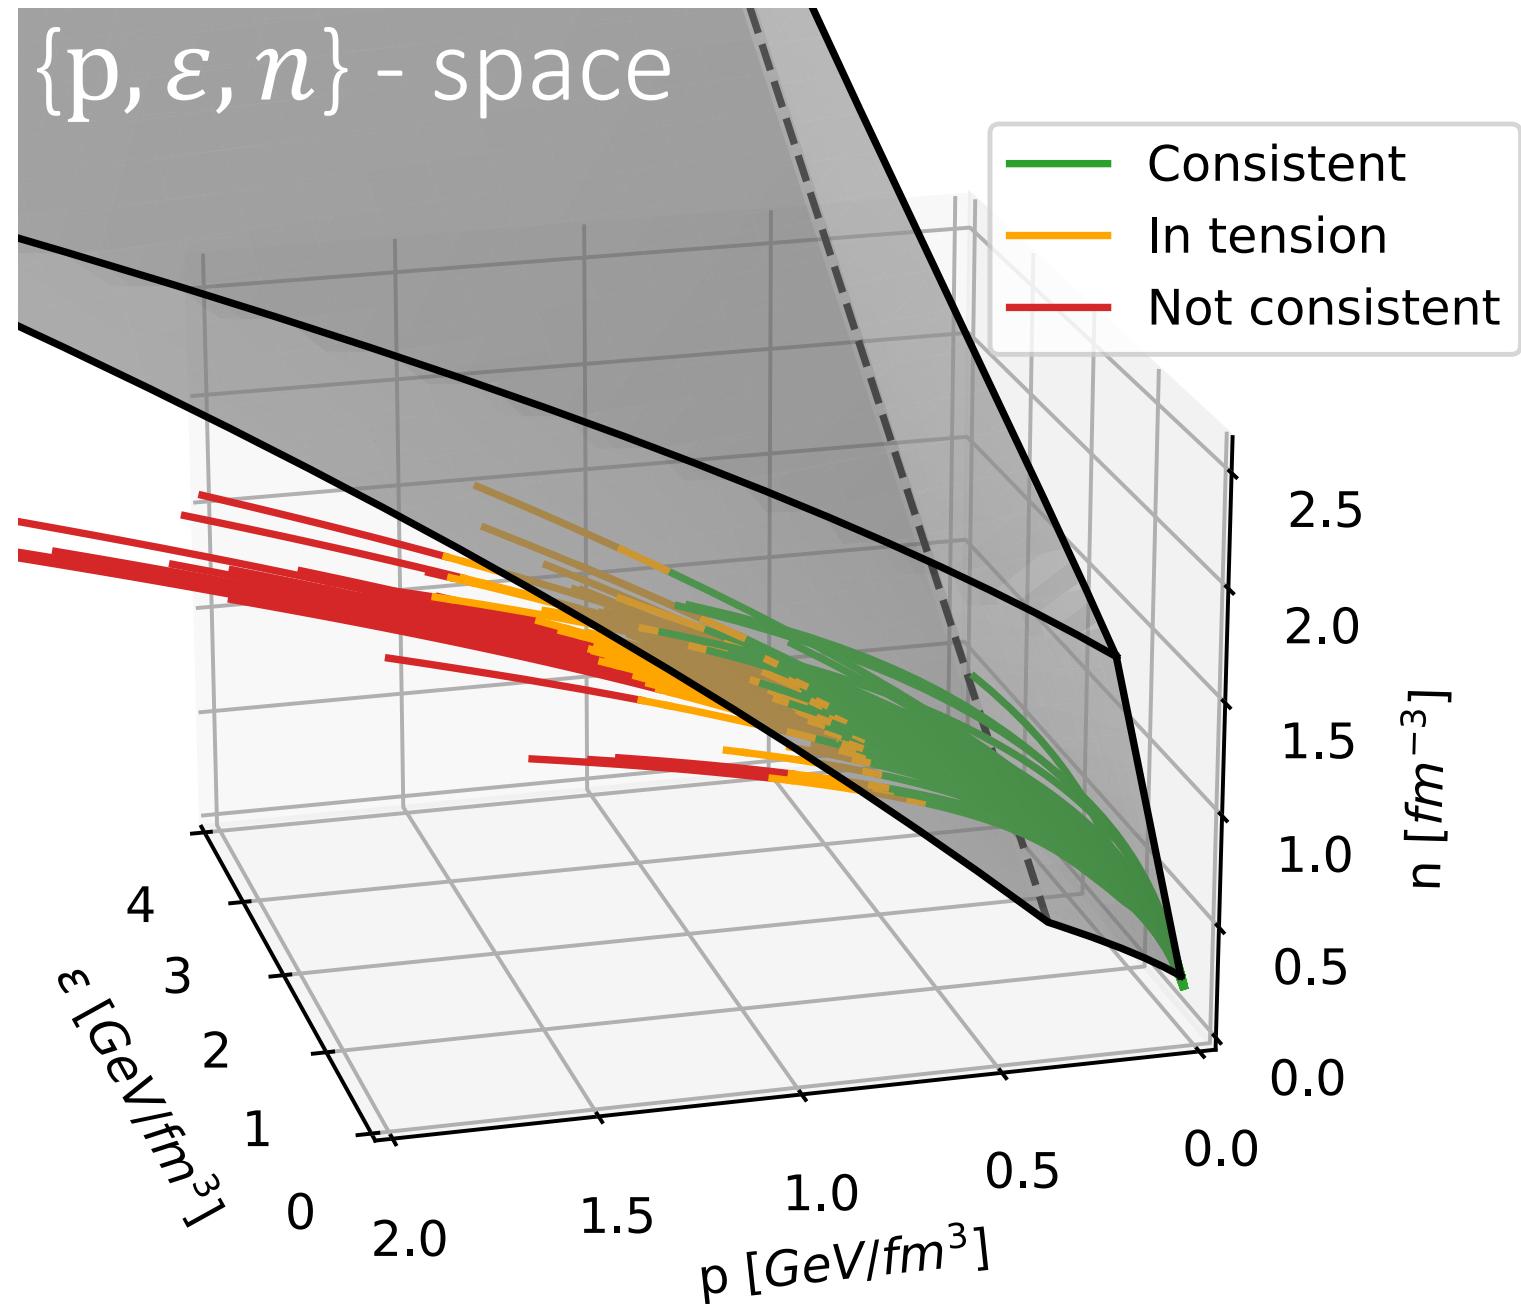

Mapping to $\epsilon - p$ -plane

Constraints for fixed n on $\epsilon - p$ -plane

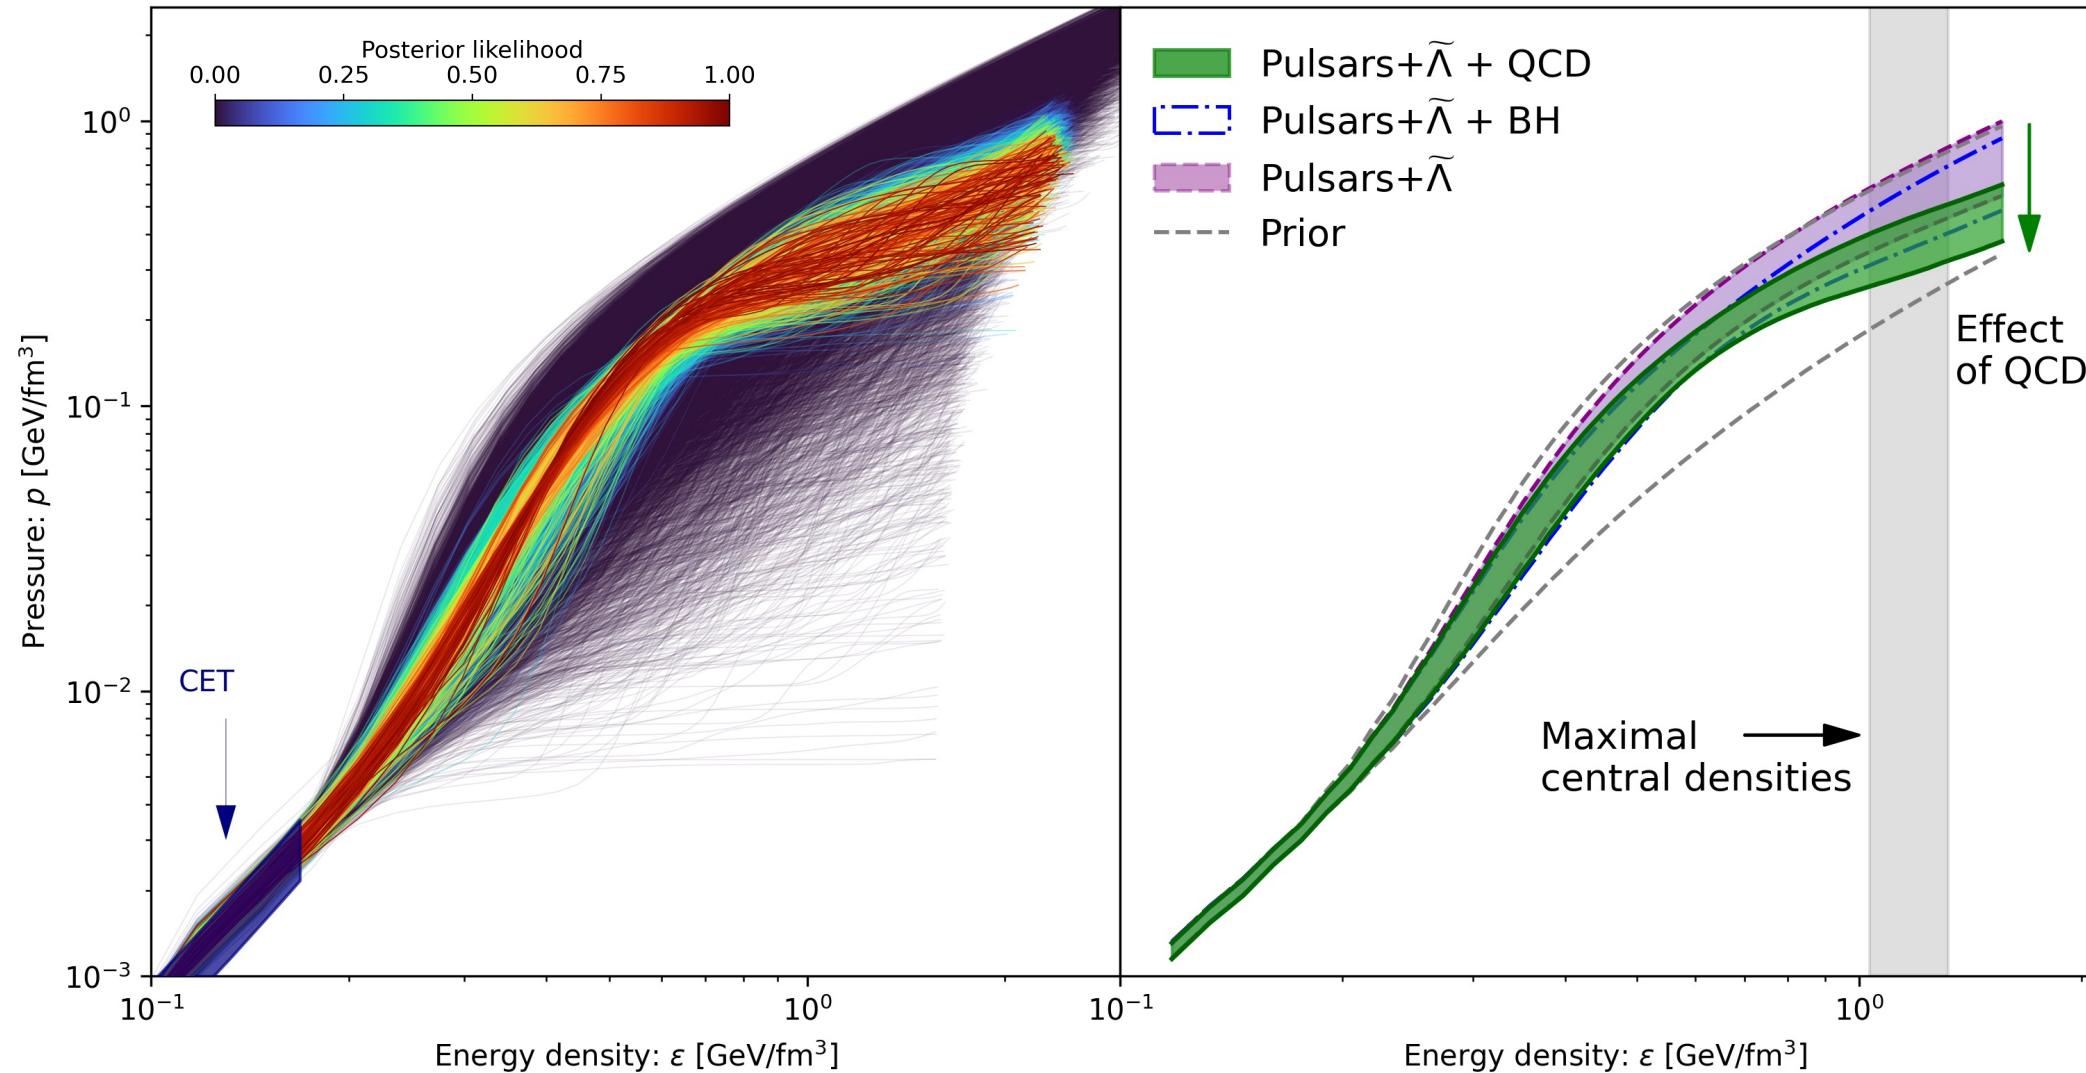

Constraints in $\{p, \varepsilon, n\}$ - space

EoSs from CompOSE database
compose.obspm.fr

Bayesian inference study

Conclusion

QCD at high densities using conditions of **causality** and **stability** offers significant and nontrivial information about the EoS at NS densities

Conclusion

QCD at high densities using conditions of **causality** and **stability** offers significant and nontrivial information about the EoS at NS densities

- EoS in $\{\mu, n, p\}$ - space contains more information than $p(\varepsilon)$

Conclusion

QCD at high densities using conditions of **causality** and **stability** offers significant and nontrivial information about the EoS at NS densities

- EoS in $\{\mu, n, p\}$ - space contains more information than $p(\varepsilon)$
- pQCD is responsible for softening of the EoS at the NS densities

Conclusion

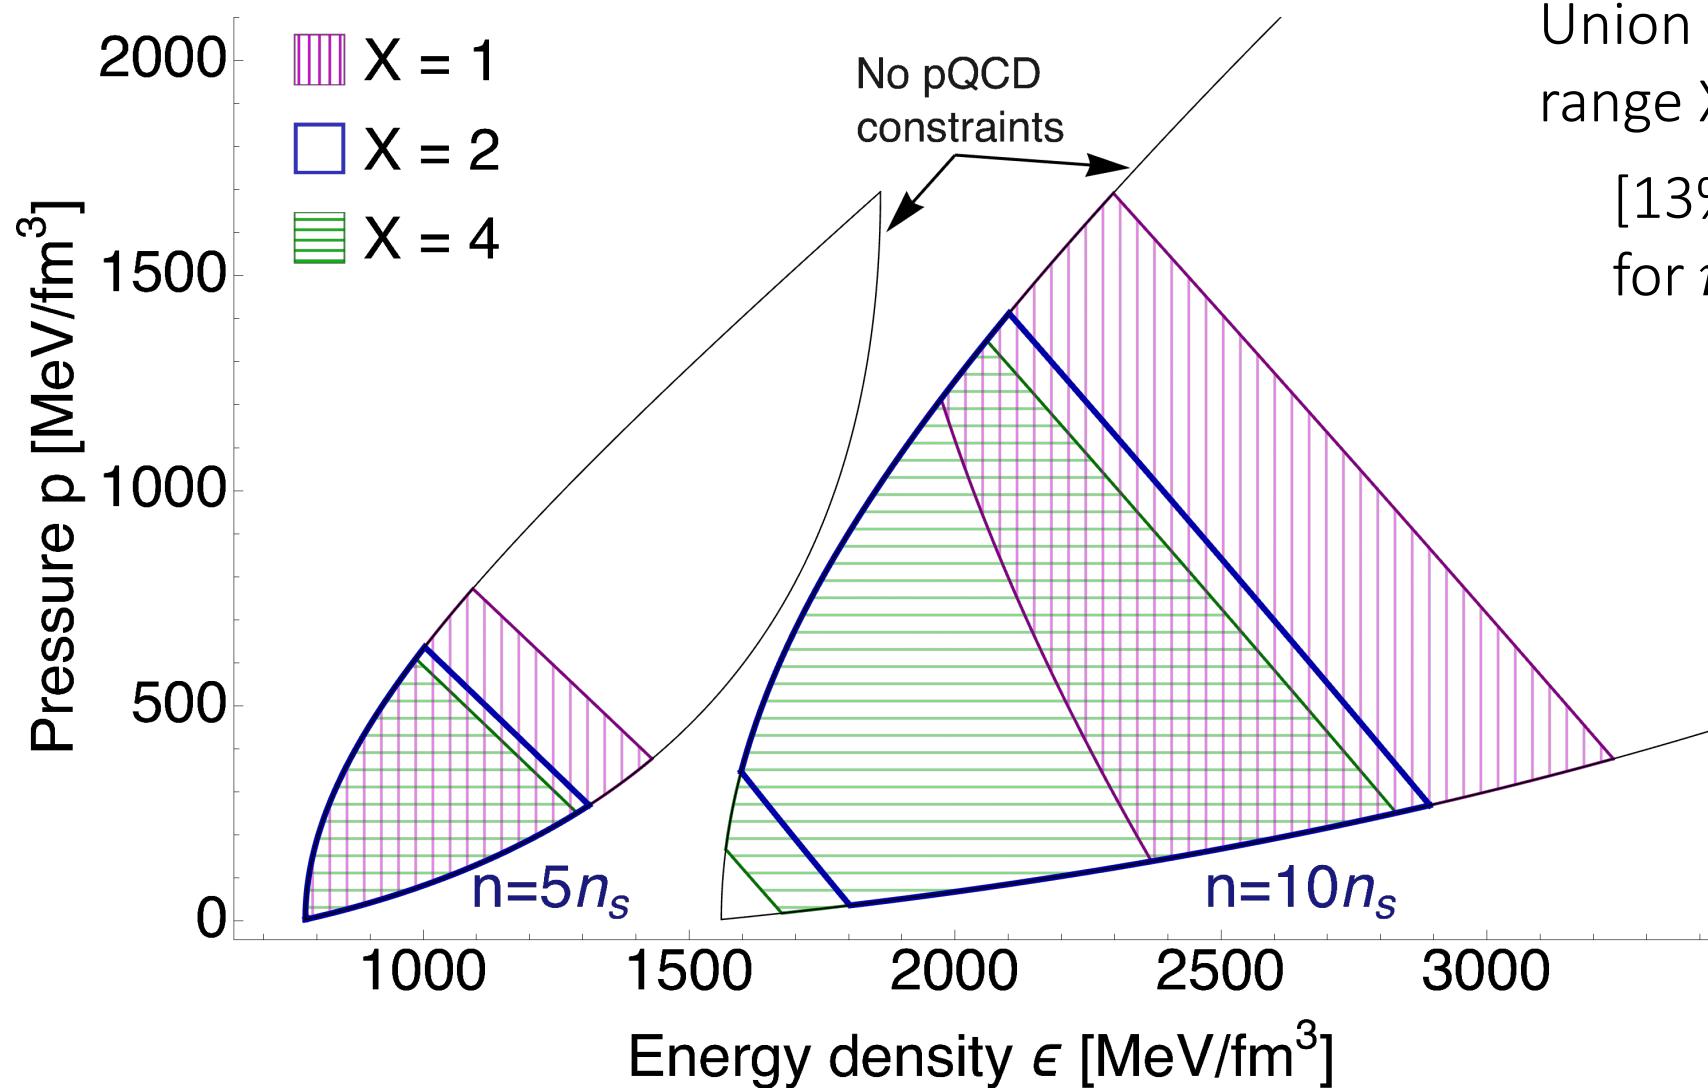

QCD at high densities using conditions of **causality** and **stability** offers significant and nontrivial information about the EoS at NS densities

- EoS in $\{\mu, n, p\}$ - space contains more information than $p(\varepsilon)$
- pQCD is responsible for softening of the EoS at the NS densities
- Essential to include pQCD in any complete inference study

We provide a Python script to impose pQCD constraints at any density

Linear scale and X dependence

Union of allowed areas in range $X = [1,4]$ excludes
[13%, 64%, 92.8%]
for $n = [3, 5, 10] n_s$
