

# Software Review: Update

8 April 2022  
Benjamin Blancon

Basic selection: 2 tight SS Muons with  $P_t > 20$  GeV,  $|\eta| < 2.4$  and tight isolation.

$T' \rightarrow$  Semi-leptonic channel

## Dataset:

/TTTo2L2Nu\_TuneCP5\_13TeV-powheg-pythia8/RunIISummer20UL18MiniAODv2-106X\_upgrade2018\_realistic\_v16\_L1v1-v1/MINIAODSIM: ttbar (146,010,000 Events).

/TprimeBToTH\_M-700\_LH\_TuneCP5\_PSweights\_13TeV-madgraph-pythia8/RunIISummer19UL18MiniAODv2-106X\_upgrade2018\_realistic\_v16\_L1v1-v1/MINIAODSIM: signal (389,500 events).

## Looking for the Cuts!

List of studied variables:  $\Delta R/\Delta\phi$  between the two muons.

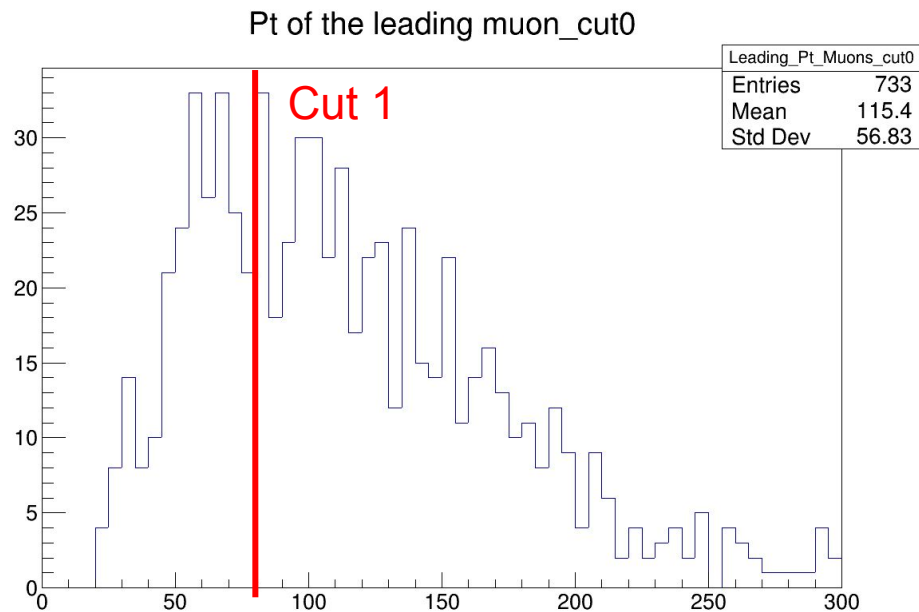

Pt of the two muons.

St = Pt of the sum of the two muons.

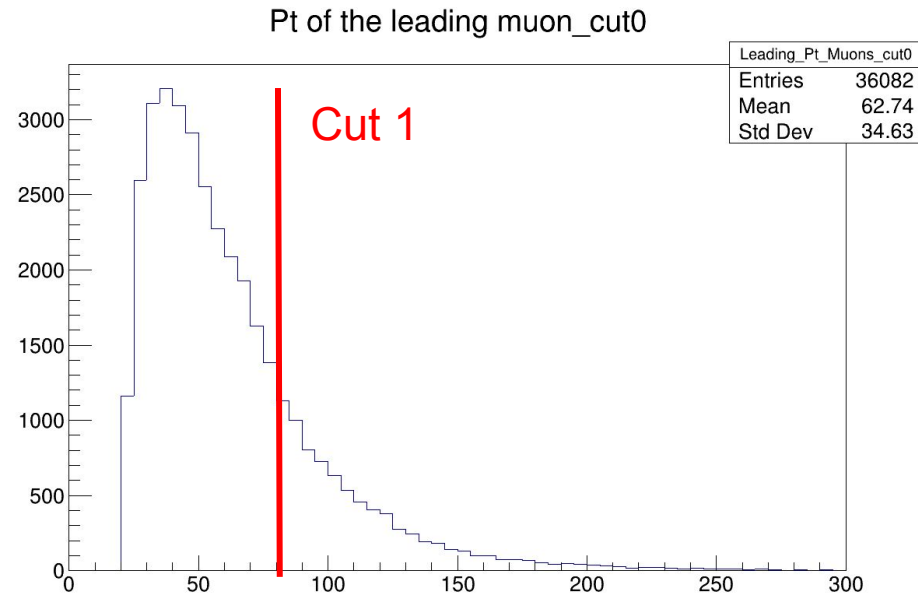

Number of b-jets (mainly for the other backgrounds).

2 possible strategies for the moment.

# First strategy: Cut 1 (Pt of the first muon > 80 GeV)

Signal

TTbar

Selection	Signal	TTbar	S/B
Basic selection	25.12	3273.74	0.77%
Cut 1: Pt first muon > 80 GeV	17.34	739.00	2.35%

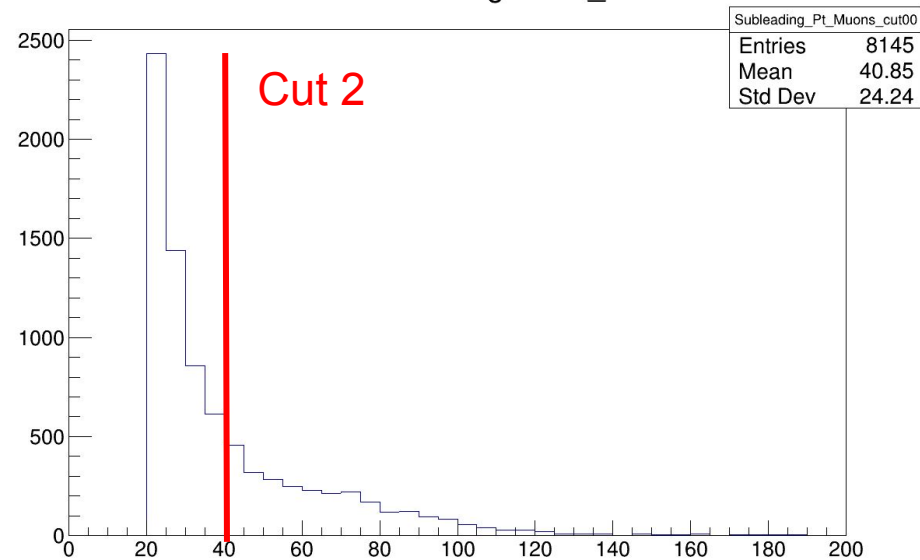

# First strategy: Cut 2 (Pt of the second muon > 40 GeV)

Pt of the subleading muon\_cut00

Signal

Pt of the subleading muon\_cut00

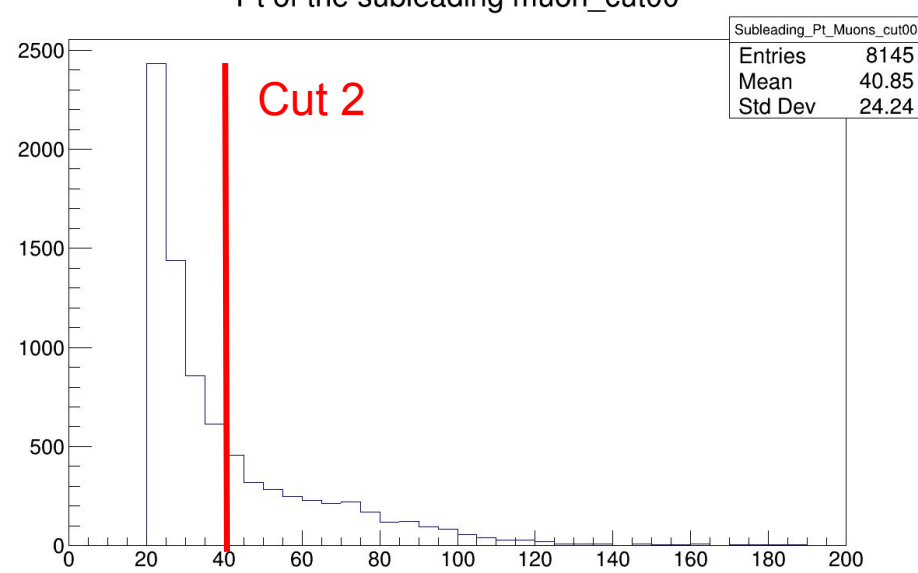

TTbar

Pt of the subleading muon\_cut00

Signal

Pt of the subleading muon\_cut00

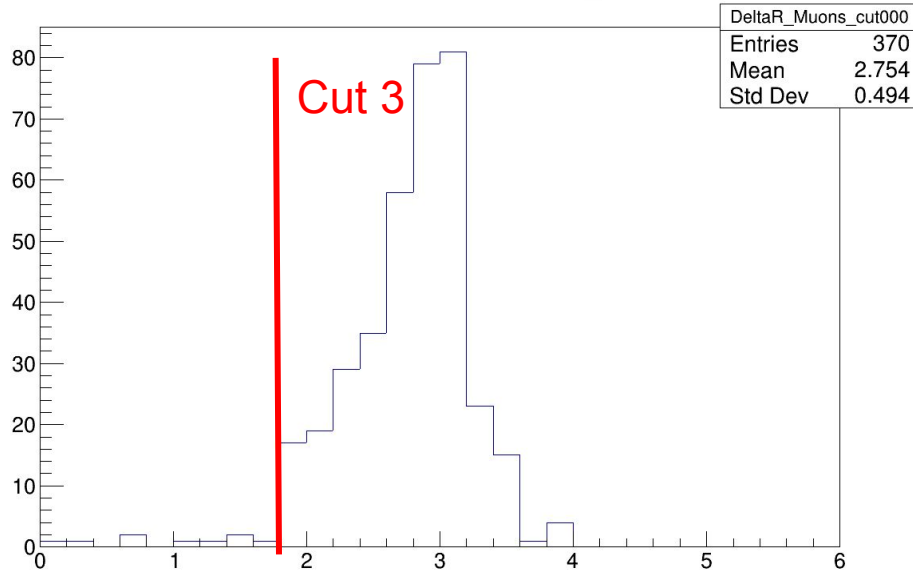

TTbar

Selection	Signal	TTbar	S/B
Basic selection	25.12	3273.74	0.77%
Cut 1: Pt first muon > 80 GeV	17.34	739.00	2.35%
Cut 2: Pt second muon > 40 GeV	12.68	254.41	4.98%

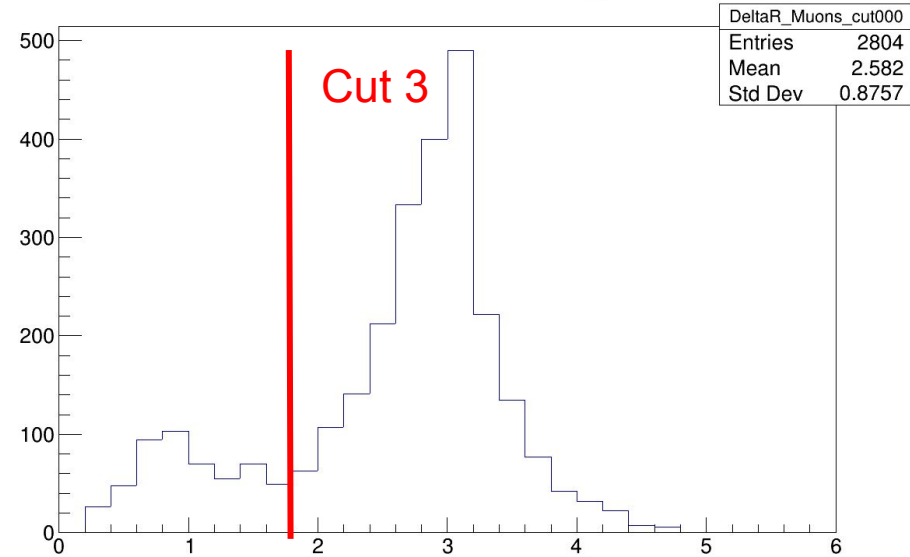

# First strategy: Cut 3 ( $\Delta R > 1.8$ )

Delta R between the 2 muons\_cut000

Signal

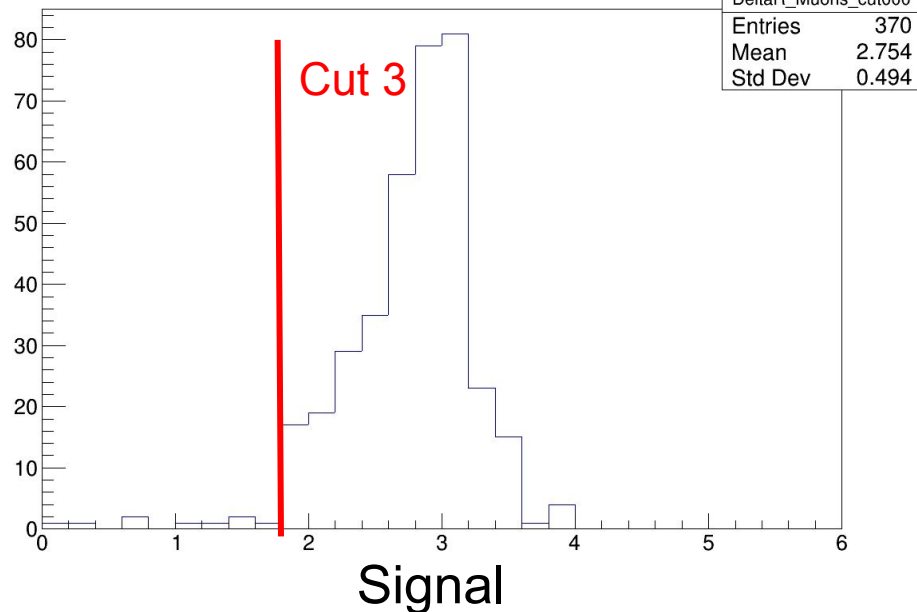

Delta R between the 2 muons\_cut000

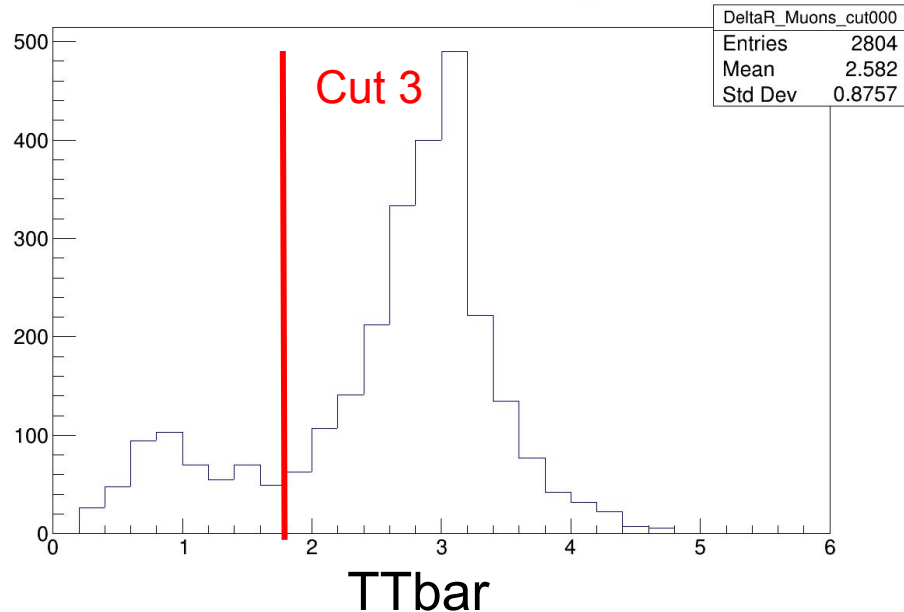

$TT\bar{b}$

Delta R between the 2 muons\_cut000

Delta R between the 2 muons\_cut000

Selection	Signal	TTbar	S/B
Basic selection	25.12	3273.74	0.77%
Cut 1: Pt first muon > 80 GeV	17.34	739.00	2.35%
Cut 2: Pt second muon > 40 GeV	12.68	254.41	4.98%
Cut 3: $\Delta R > 1.8$	12.37	207.56	5.96%

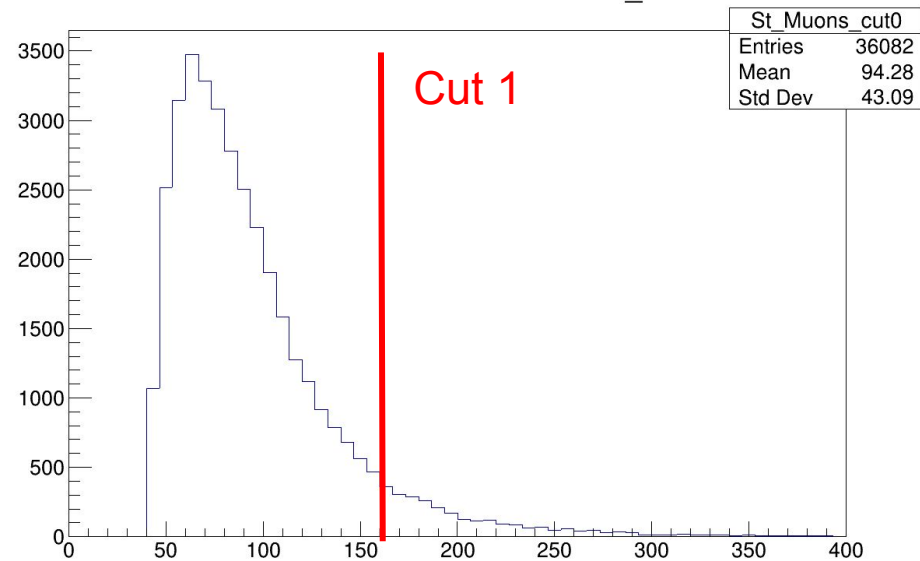

## Second strategy: Cut 1 ( $St > 160$ GeV)

Pt of the sum of the two muons\_cut0

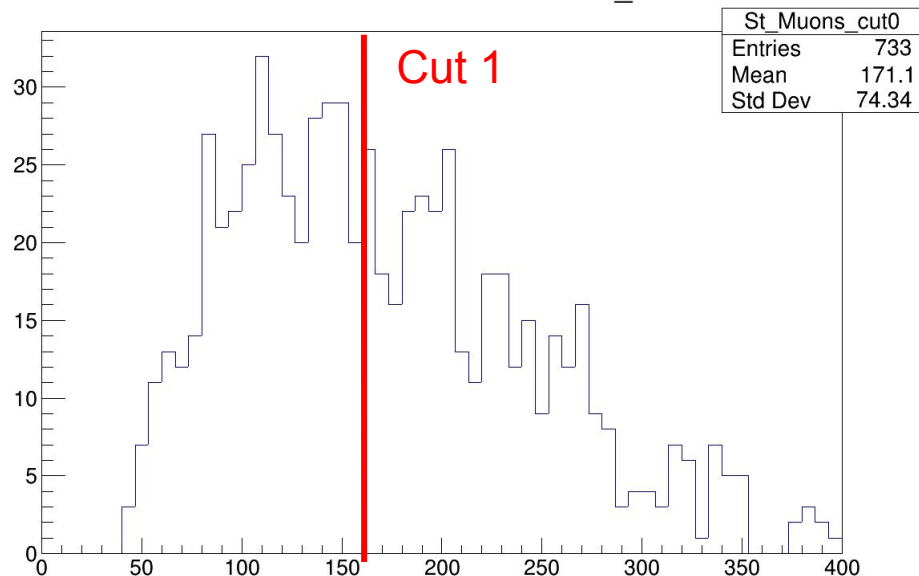

Signal

Pt of the sum of the two muons\_cut0

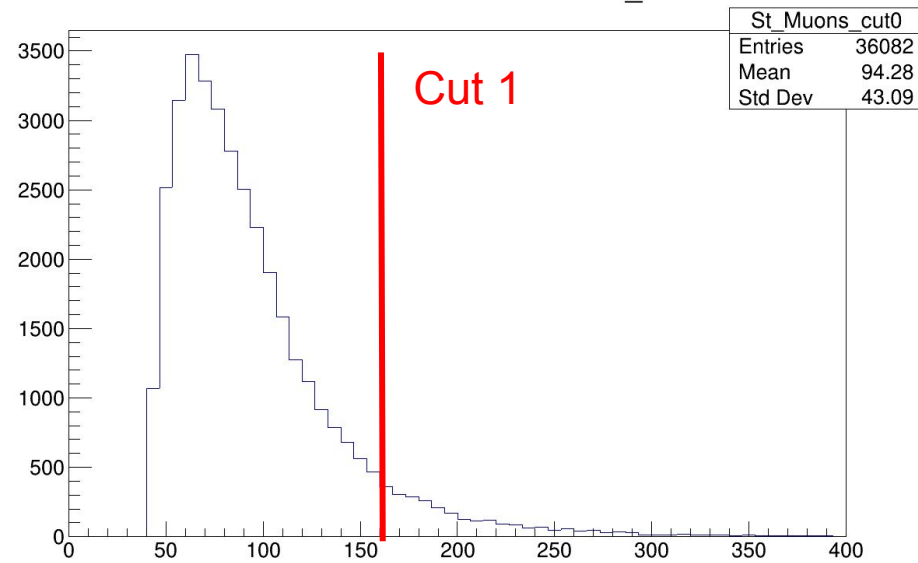

$TT\bar{b}$

Pt of the sum of the two muons\_cut0

Signal

Pt of the sum of the two muons\_cut0

TTbar

Selection	Signal	TTbar	S/B
Basic selection	25.12	3273.74	0.77%
Cut 1: St > 160 GeV	12.68	246.06	5.15%

## Second strategy: Cut 2 ( $\Delta R > 1.8$ )

Delta R between the 2 muons\_cut00

Signal

Delta R between the 2 muons\_cut00

$TT\bar{b}$

Delta R between the 2 muons\_cut00

Signal

Delta R between the 2 muons\_cut00

TTbar

Selection	Signal	TTbar	S/B
Basic selection	25.12	3273.74	0.77%
Cut 1: $St > 160$ GeV	12.68	246.06	5.15%
Cut 2: $\Delta R > 1.8$	12.20	190.81	6.39%

Selection	Signal	TTbar	S/B
Basic selection	25.12	3273.74	0.77%
Cut 1: Pt first muon > 80 GeV	17.34	739.00	2.35%
Cut 2: Pt second muon > 40 GeV	12.68	254.41	4.98%
Cut 3: $\Delta R > 1.8$	12.37	207.56	5.96%

### First strategy

Selection	Signal	TTbar	S/B
Basic selection	25.12	3273.74	0.77%
Cut 1: $S_t > 160$ GeV	12.68	246.06	5.15%
Cut 2: $\Delta R > 1.8$	12.20	190.81	6.39%

### Second strategy

There are at least 10 signal events (even with an extra cut asking for at least one b-jet).

The results are roughly the same (number of signal events, S/B). The first strategy has 3 Cuts but I cut on the  $S_t$  for the second strategy.

→ Need to find a variable where the signal stands out the background to choose the best strategy!

I also have to check if the signal events are the ones we are waiting for. → ONGOING.
