Discussions
Questions

Exercice de prospective nationale en physique nucléaire, physique des particules et astroparticules
Développements technologiques et applications associées

L'IN2P3 organise et conduit, en y associant les organismes et acteurs concernés, un exercice de prospective nationale dans ses domaines de compétence: physique nucléaire, physique des particules et astroparticules, ainsi que les développements technologiques et applications associées.

Drivers et Recommandations du GT09

Drivers

- Develop a reliable, evolving, and performing e-infrastructure suitable to IN2P3 experiment needs
- Make use and develop breakthrough solutions to tackle the upcoming HEP, astroparticle, and cosmology data flow

Rapport structuré par :

- Infrastructure needs & computing models
- Accelerators & Emerging Technologies
- Artificial Intelligence
- Software development and quality assurance
- Training, education and career development

Recommandations classées suivant trois grands 'thèmes'

Infrastructure needs and computing models for IN2P3

Improving software performance and quality

Empowering and strengthening the workforce

Infrastructure needs and computing models for IN2P3

Principalement recommandations niveau grands centres computing et IN2P3

Improving IN2P3's computing infrastructure

Impacts sur notre environnement de travail

- 1. Preserve IT ecosystem:** To provide efficient IT solutions to worldwide scientific collaborations, IN2P3 needs to confirm its commitment into a dedicated e-infrastructure.
- 2. Optimise the e-infrastructure:** Consolidate at the national level the organization of the resources and services providers, while maintaining the central and stable role of the CC-IN2P3. Sites could be data or CPU oriented, federated with a unique user portal bearing in mind local specifics, experiment models development and the international landscape evolution.
- 3. Assure access to new type of hardware resources:** Secure access to large scale GPU resources allowing massive execution of IA and other algorithms, focusing first on the new IDRIS supercomputer converged platform.
- 4. Improve synergies:** Connect experts in thematic networks enhancing their role in advertisement and technical user support. [Strengthen the links between the CC-IN2P3 and the laboratories for intensified exchanges on user support or innovative solutions.](#)
- 5. Influence the international decision process:** Promote the engagement of [IN2P3 in European or international initiatives](#) to enhance our impact on the [future computing landscape ecosystem](#) and its implementation in France, including R&Ds, experiment computing models or the choice of common tools across experiments and sites.

Improving software performance and quality

Intensifier l'essor
de la ferme GPU

Software

Qualité des software produits

6. **Facilitate AI:** Strengthen collaboration with ML Computer Scientists through the release of open data sets, funding of co-supervised PhD theses, and collaborative projects.
7. **Make use of and extend expertise in Real Time Analysis.** This allows enhancing the scientific throughput of experiments, in particular when facing limited storage resources. This requires using in production advanced algorithms (in particular in Machine Learning) on GPU/FPGA. Make use and extend IN2P3 expertise on ML/DL in real-time applications on innovative infrastructures.
8. **Engage in evolving and emerging technologies:** for the short and mid terms, continuous follow-up of GPU/FPGA evolutions, identification of their possible use especially for online computing and first testbeds or production installations must be encouraged. On a longer term, IN2P3 could benefit from quantum computing. This requires to identify the suited applications to this new paradigm and to monitor a technology survey in order to acquire the necessary software skills and take advantages of similar initiatives worldwide.
9. **Adopt common tools for software development:** Continued effort to provide and release efficient collaborative tools for project management, and the entire DevOps lifecycle
10. **Define and apply common quality standards:** Establish common quality standards at IN2P3. These standards will be accompanied by reference documents, examples, practical recommendations, guidelines and state of the art good practices.

Empowering and strengthening the workforce

Veille et formation

Empowering the workforce

11. **Ensure an attractive work environment:** nowadays IT innovations that may attract engineers are no more coming from the research world. The attractiveness of the technology is no longer enough; it is necessary to play on other levers of career development to ensure the desired skill levels.

12. **Lifelong learning:** In the extremely fast moving field of computing and data science lifelong learning is essential. In addition to existing initiatives, IN2P3 shall further accelerate training of the workforce, e.g. through on-line options, such as tutorials, massive open online courses (MOOCs), and webinars.

Peut-on faire qqch avec l'université ?

Prospectives IP2I 2019 : 2 grands thèmes

Computing Infrastructure

= Infrastructure needs and computing models for IN2P3

Batch

HPC

FPGA / Hybride

GPU

Clouds, container, virtualisation

Networking

Databases

Storage

Algorithms

≠ Improving software performance and quality

Machine Learning

Parallel Analysis

Heterogeneous computing

Symbolic computation

Recommendations :

Increase expertise in

Machine learning (R6)

GPU Usage (R8)

Running algo & neural net in FPGA (R7)

'Modern' data processing framework (R9)

(Spark, Dask, Kubernetes ...)

Cooperation between physicists and engineers should also be strengthened

Empowering and strengthening the workforce

Engineers working with physicist to improve the performance and the quality of the code and its maintainability

set up an interactive analysis farm, potentially using part of the current Tier3 facility. ✓

cpu farm

important to be able to access new hardware for training, prototyping and R&D purposes ✓

gpu farm

+ Groupe Calcul !!!
