

Fast waveform generation

lundi 25 juillet 2022 18:40 (45 minutes)

This tutorial shows how to use the fast waveform generators to match signals injected in LDC datasets.

The objective is to:

- Generate fast waveforms in the frequency domain for Galactic binaries (GB)
- Generate fast waveforms in the frequency domain for massive black hole binaries (MBHB)
- Generate fast waveforms for EMRI (if time permits)
- Plot the waveform against simulated data
