New developments in SModelS

mercredi 26 avril 2023 09:55 (20 minutes)

I will present recent developments in SModelS, in particular the update of the database with the latest available experimental results for full Run-2 luminosity, the interface to the new statistical package Spey, and the statistical combination of analyses. The latter allows one to increase the robustness of the statistically inferred constraints. To demonstrate the physics impact, I will use the electroweakino sector of the MSSM as an illustrative example.
