

Alert management in optical surveys

Optical Surveys | *ZTF & LSST*

ZTF | 47deg² | 5 σ depth 20.5 mag | g, r, i
 full sky every night | High-cadence fields | dedicated spectroscopy

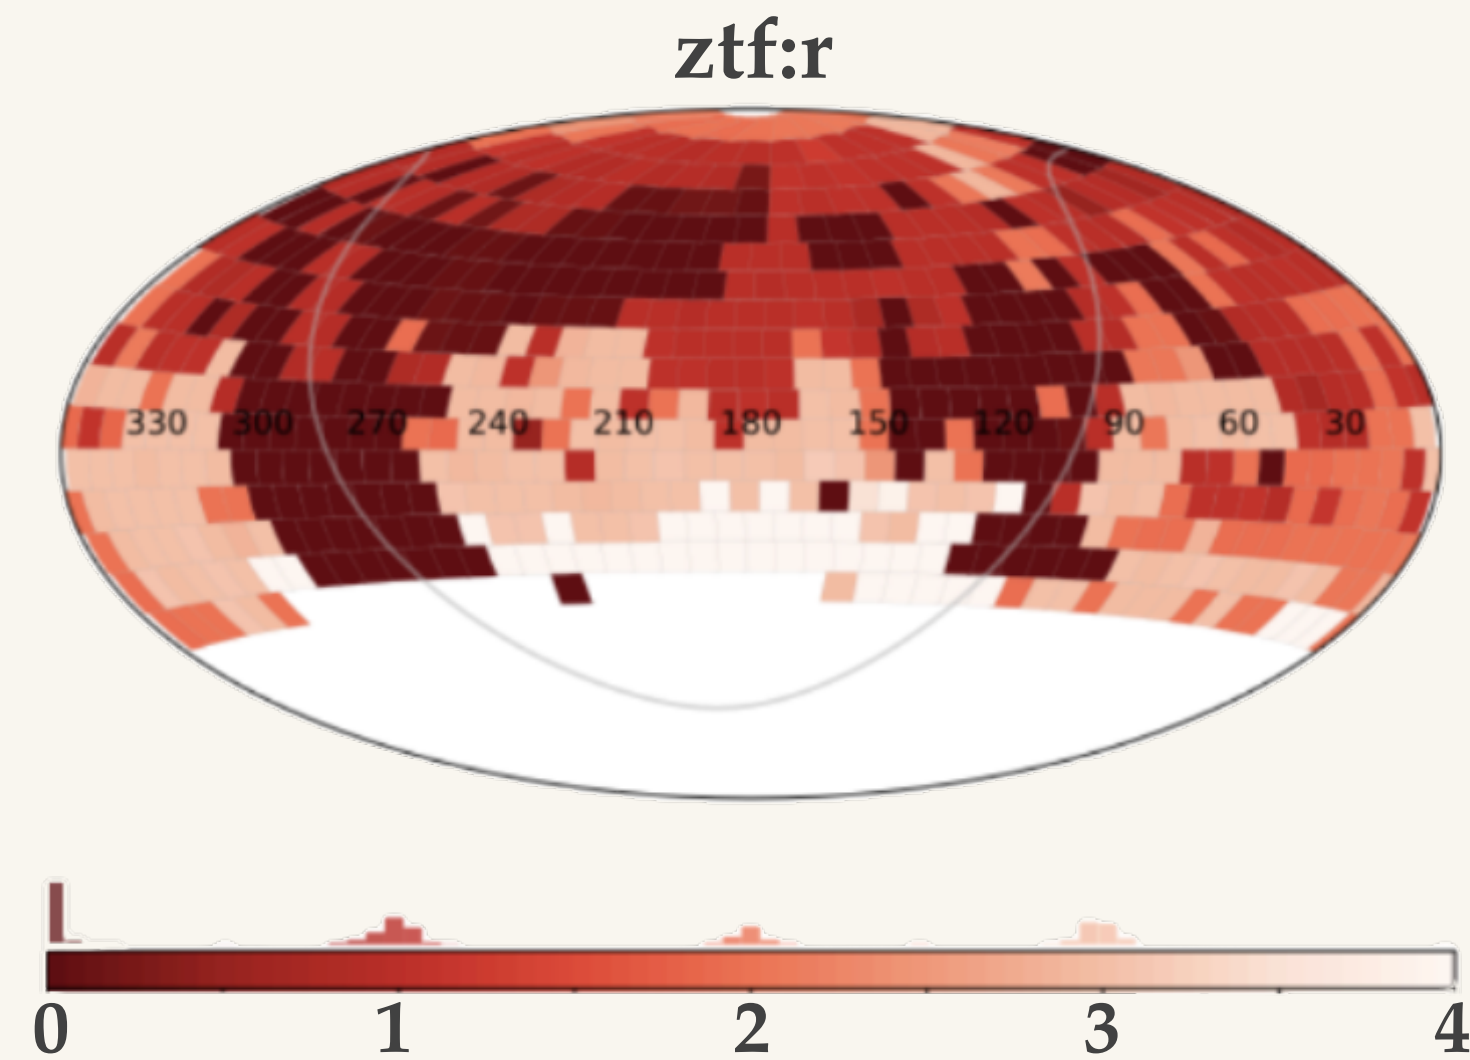

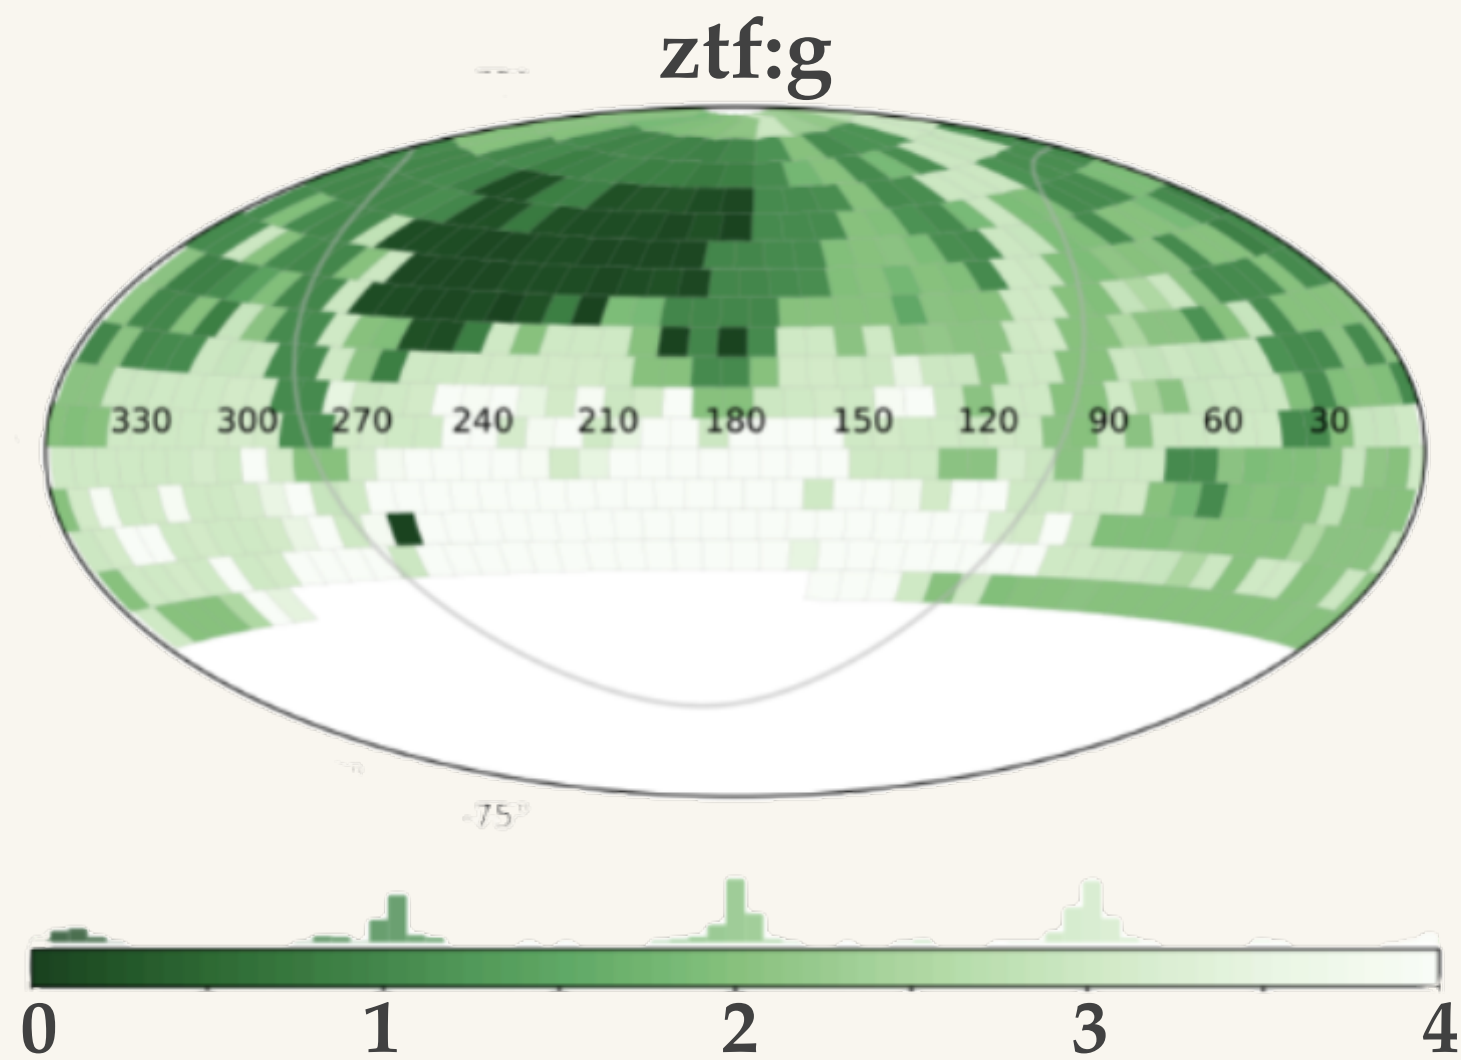

LSST | 9 deg² | 5 σ depth ~24 mag | (u),g , r, i, z, y
 few-days cadence | deep fields to 26 mag | "flagship" survey

ZTF | full sky & high cadence

Stats from 03/2018-12/2020 | Cosmo DR2 | Rigault et al. in prep

Robert Stein (DESY), Harsh Kumar (IITB), Michael Coughlin (Caltech), Varun Bhalerao (IITB), Shreya Anand (Caltech), Igor Andreoni (Caltech), Maitreya Khandagale (IITB), Kunal Deshmukh (IITB), Pradip Gatkine (UMD), Viraj Karambelkar (Caltech), Yashvi Sharma (Caltech), Mansi Kasliwal (Caltech), Tomas Ahumada (UMD), Leo P. Singer (NASA GSFC), Eric Bellm (UW):

On behalf of the Zwicky Transient Facility (ZTF) and Global Relay of Observatories Watching Transients Happen (GROWTH) collaborations:

We have continued observing the localization region of the gravitational wave trigger S190910d (LVC et al. GCN 25707) with the Palomar 48-inch telescope equipped with the 47 square degree ZTF camera (Bellm et al. 2019, Graham et al. 2019). In addition to the target-of opportunity observations beginning at UT 2019-09-04 10:18 UT which were already reported by us (Ananad et al. GCN 25706), we have continued serendipitous observations of the localisation region. Each exposure was 30s, with a typical median depth of 20.6 mag. In total, we have now observed 34.6% of the enclosed probability map at least twice since merger, accounting for chip gaps.

The images were processed in real-time through the ZTF reduction and image subtraction pipelines at IPAC to search for potential counterparts (Masci et al. 2019). **AMPEL (Nordin et al. 2019) was used to search the alerts database for candidates.** We rejected stellar sources (Tachibana and Miller 2018) and moving objects, applied machine learning algorithms (Mahabal et al. 2019), and removed candidates with history of variability prior to the merger time. Four additional candidates were found by our pipeline, lying within the 95% probability region.
