User Portal

FJPPL — Japan-France workshop on computing technologies

Cyril L'Orphelin- CCIN2P3/CNRS

Why ? What ? How ?

➤ Why a User Portal?

- To help users make a good usage of our resources
- Need to centralize user information - A single entry point

➤ What to show?

- News (services availability, notifications)
- Monitoring / Metrics (job status, available storage, resource usage)
- Documentation / Tools (useful links)

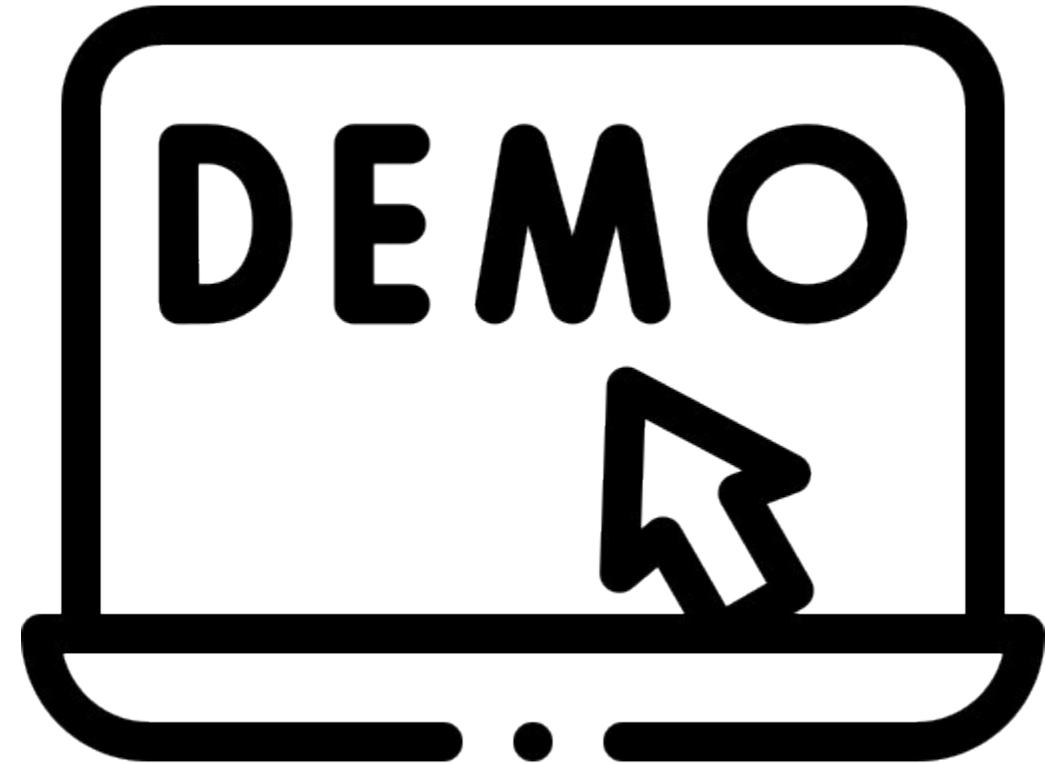

➤ How to proceed?

- Data aggregation
- No reinvent the wheel
- Use existing tools (analytics)

- The authentication and authorization is ensured with the SSO system (keycloak)
- The portal is based on a data aggregation framework called Lavoisier.
- Lavoisier is a framework which enables to retrieve, transform, merge and query heterogeneous data sources

- Storage services
- Batch system
- News Tools
- Identity Management Systems
- Helpdesk system

What's next ?

- Refactoring of the menu
 - Remove the reports entry
 - Introduce directly the reports into categories (storage, jobs ...)
 - Add new type of reports
- High level view of the statuses of the services by categories
 - Quickly inform users about global statuses (Storage , Compute, Hosting platforms, Network ...)
 - 3 statuses : ok, degraded and down
 - Access to the details - Example : Storage > Databases > MariaDB
