

Advanced Virgo+

Eleonora Capocasa

GW detectors' network observing scenario

- 90 Gw signal detected so far
- New data taking (O4) starting soon

Contribution to instrumental upgrade for O4

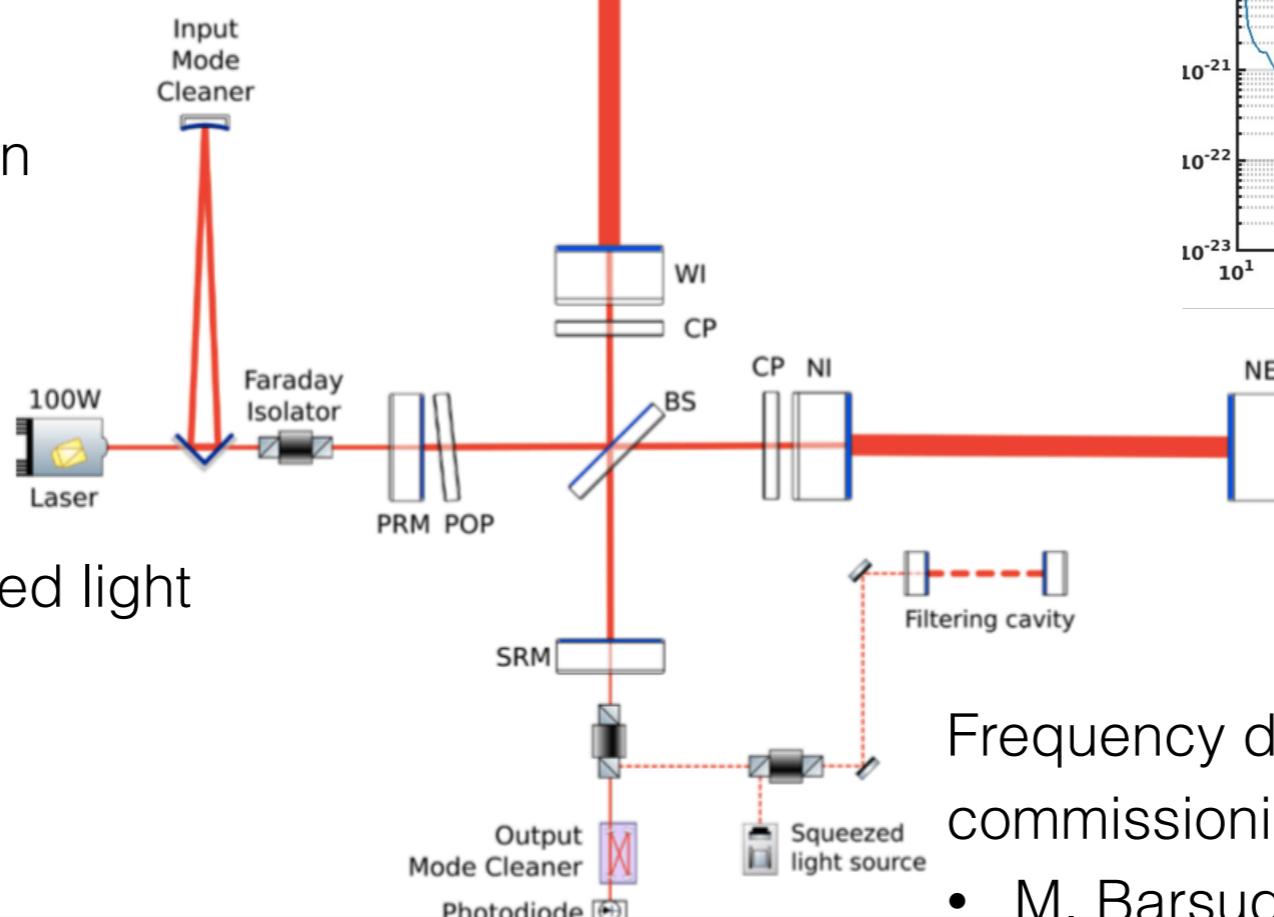

Photodiodes for new control scheme with signal recycling

- P. Prat

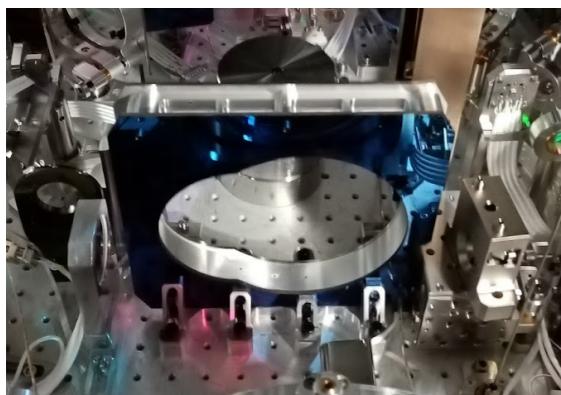

Optical characterisation

- E. Capocasa
- A. Daumas

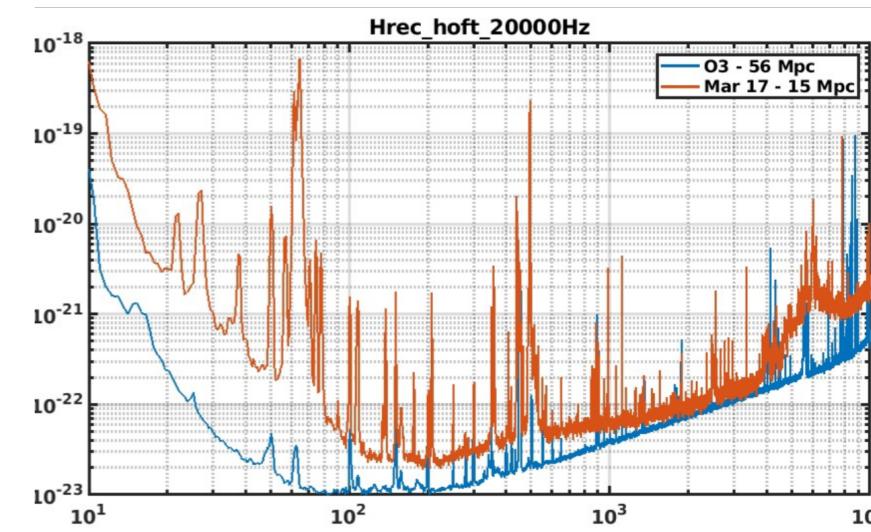

Diaphragms for scattered light

- W. Bertoli

Interferometer control and noise hunting:

- M. Barsuglia
- E. Capocasa
- Y. Zhao

Frequency dependent squeezing commissioning:

- M. Barsuglia
- E. Capocasa
- J. Ding
- Y. Zhao

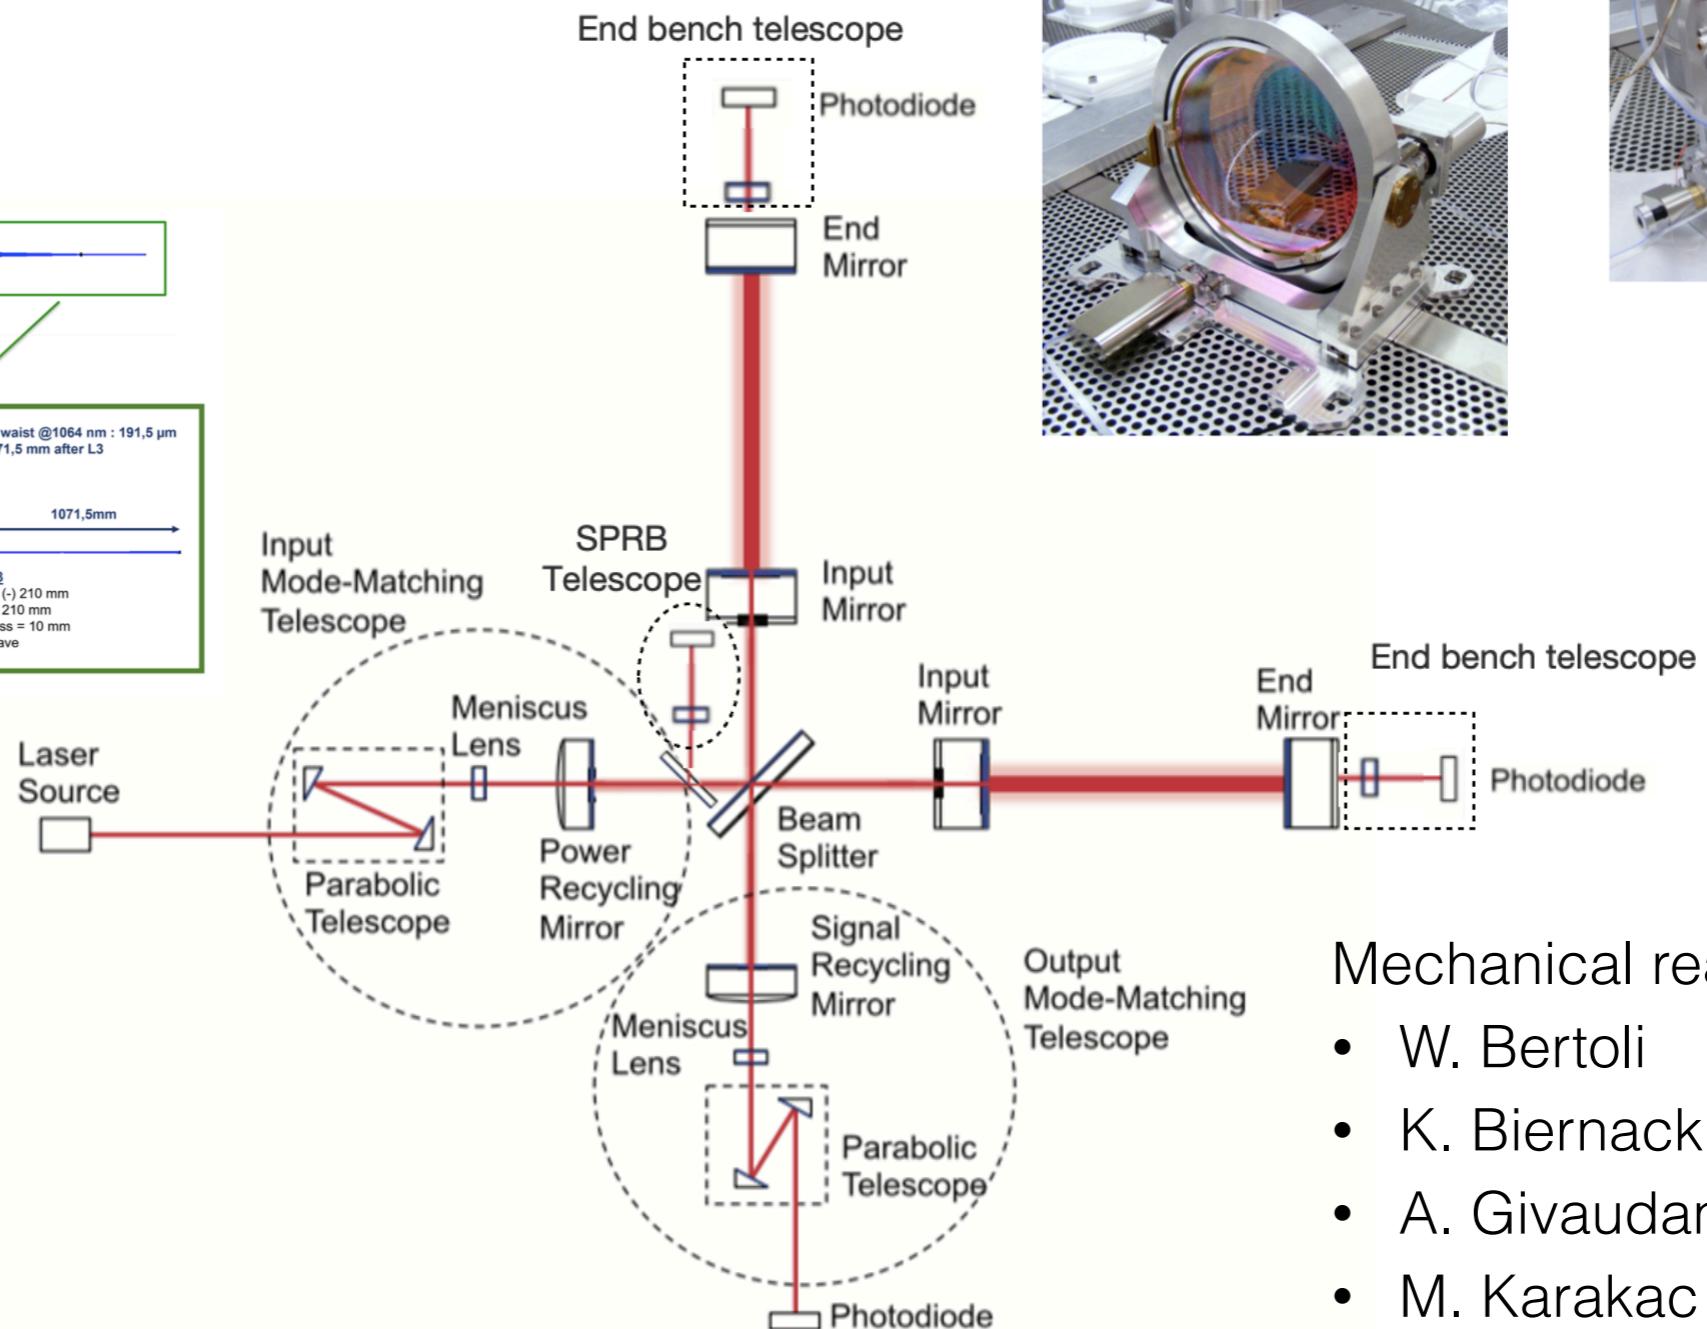

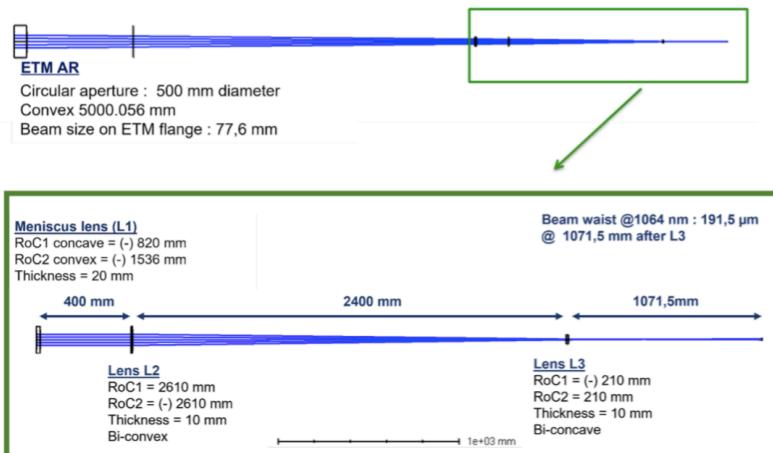

Upgrade of mode-matching telescope for O5

- Larger beam in the arms cavity to reduce thermal noise

Optical design (almost completed)

- M. Barsuglia
- E. Capocasa
- A. Daumas

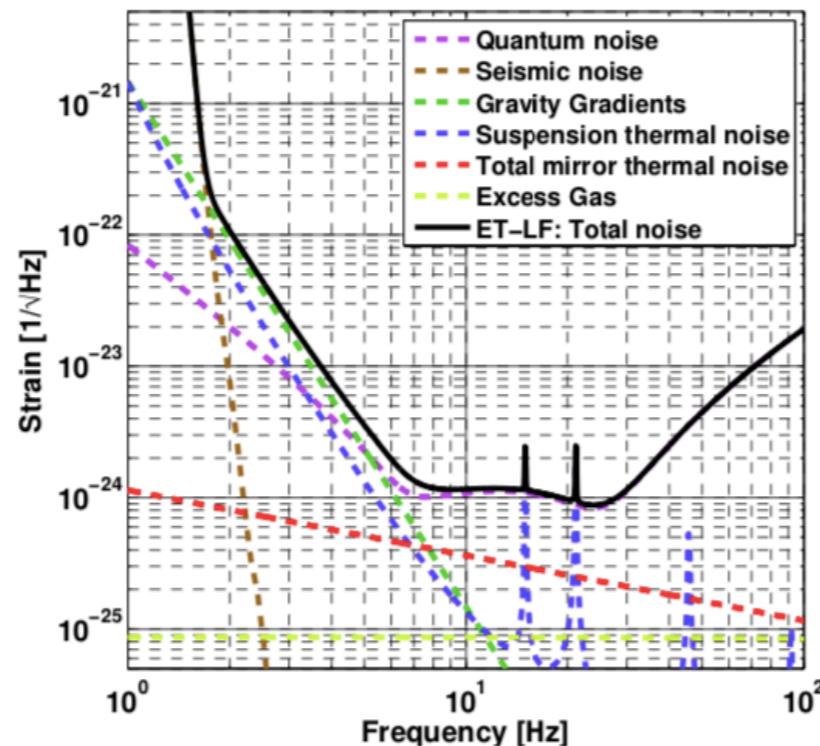

Mechanical realisation

- W. Bertoli
- K. Biernacki
- A. Givaudan
- M. Karakac

R&D on squeezing for future detectors

- Frequency dependent squeezing for GW interferometer in detuned configuration
- Table-top experiment to start soon at APC

- M. Barsuglia
- E. Capocasa
- A. Daumas
- J. Ding
- Y. Zhao

Mechanics

- M. Karakac
- K. Biernacki

Electronics

- P. Prat
