

Call for contributions

- Preparation for protoDUNE II: organization of the keep-up production → reconstruct data as soon as they become available
- People organizing the processing will get familiar with the computing activities and means in DUNE, and will acquire a direct experience
- Several new components: jobsub_lite, tokens, metcat+Rucio....
- It is important to insure a French contribution in this effort. At the moment I'm the only person working on this,
- A week at Fermilab can be foreseen
- In case you are interested please contact me before the end of April
