

# ATLAS LAPP future projections & considerations

- Significant reduction of permanent researcher over past 3-4 years
  - ✓ Overexposed on hardware activities
  - ✓ Difficulty to maintain engagement on physics analyses
  - ✓ Further reduction could happen by 2028-30
    - LHC “fatigue”, thematic mobility, retirement, ...
- Desire to engage (fraction of time) on longer term projects
  - ✓ e.g. FCC-ee physics, FCC-hh detector R&D
  - ✓ Needed for long term lab activities!
  - ✓ ... but incompatible with current engagements and person power: recruitment?
