

# What we know from the transient sky (GRBs) and plans for the future

Rosa Leticia Becerra  
Instituto de Ciencias Nucleares, UNAM

Instituto de  
Ciencias  
Nucleares  
UNAM

COLIBRI Workshop,  
Fréjus, May 10th, 2023

# Outline

- Introduction of GRBs
- Summary of the telescopes: COATLI, TAROT and RATIR
- Analysis carried out: defining the sample.
- Average light curves: observational and rest frame.
- Luminosity function and redshift distribution.
- Plan for the future: Integrating what we currently know and the arrival of COLIBRÍ.

# Collaboration

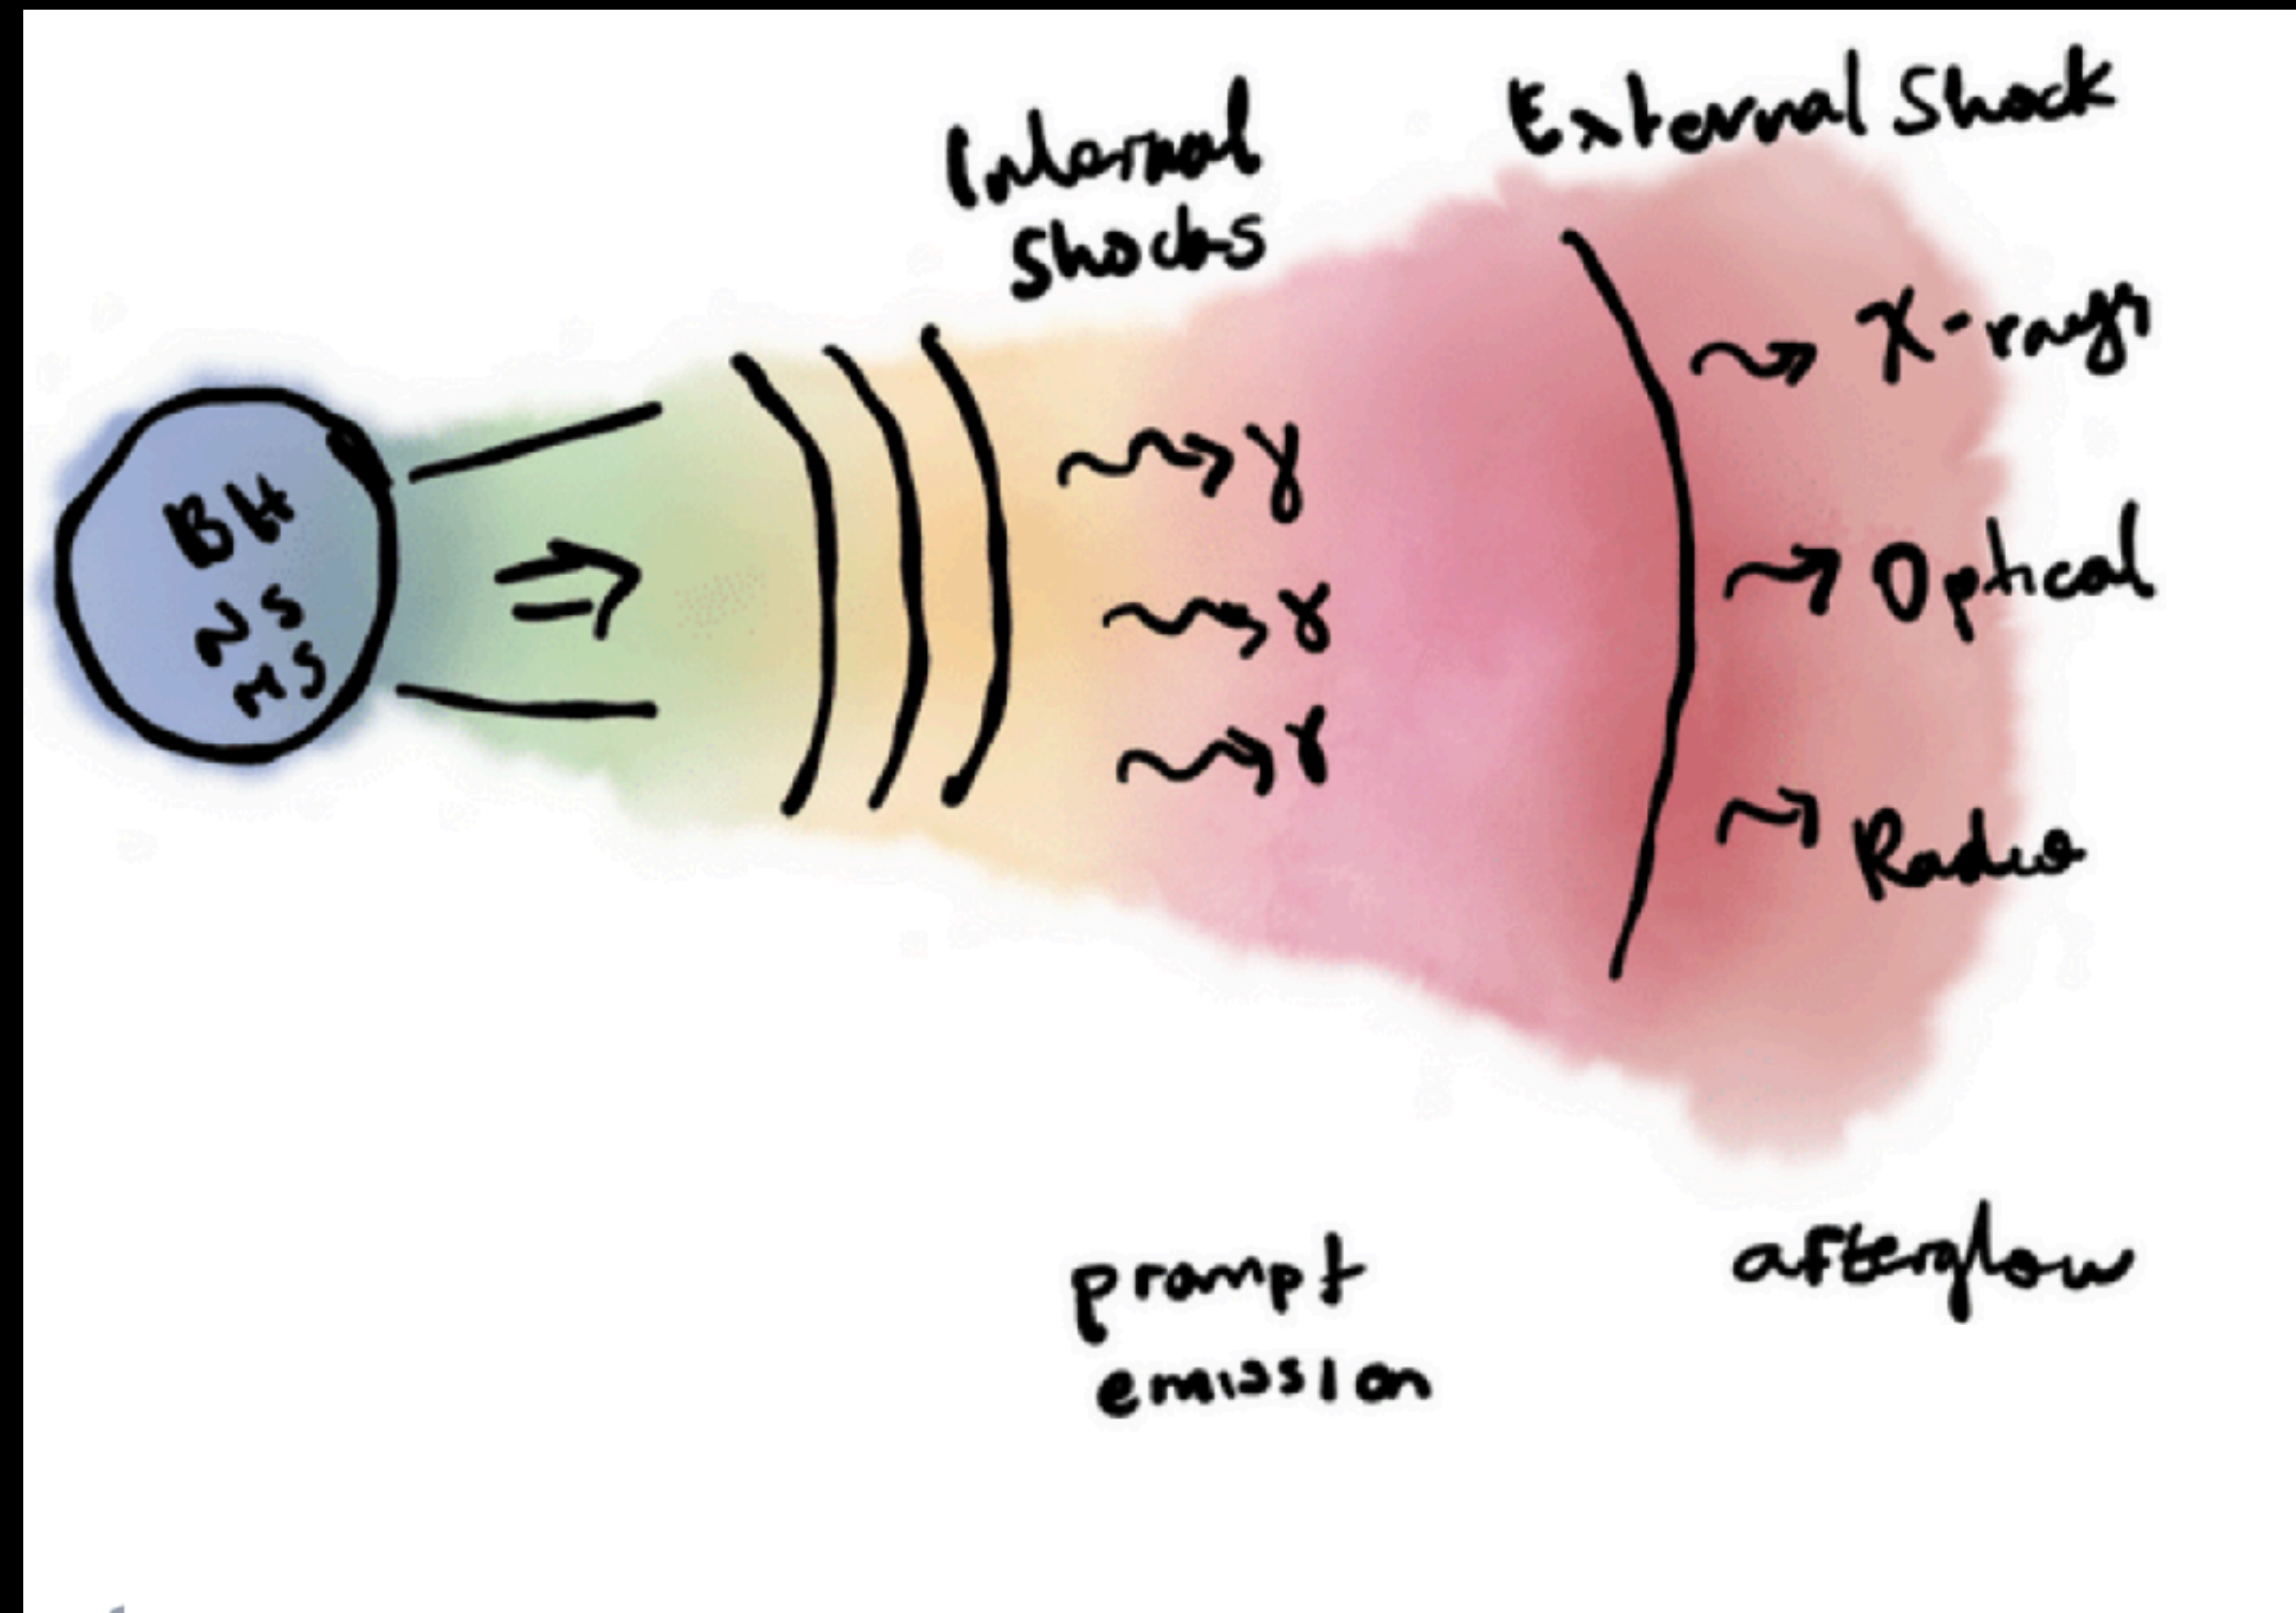

- Fabio De Colle
- Alan Watson
- Alain Klotz
- Jean-Luc Atteia
- Dafne Guetta
- William Lee
- Keneth García
- Margarita Pereyra
- Camila Angulo

+TAROT

+RATIR

+COATLI

# What is a Gamma-Ray Burst?

# Our current toys :)

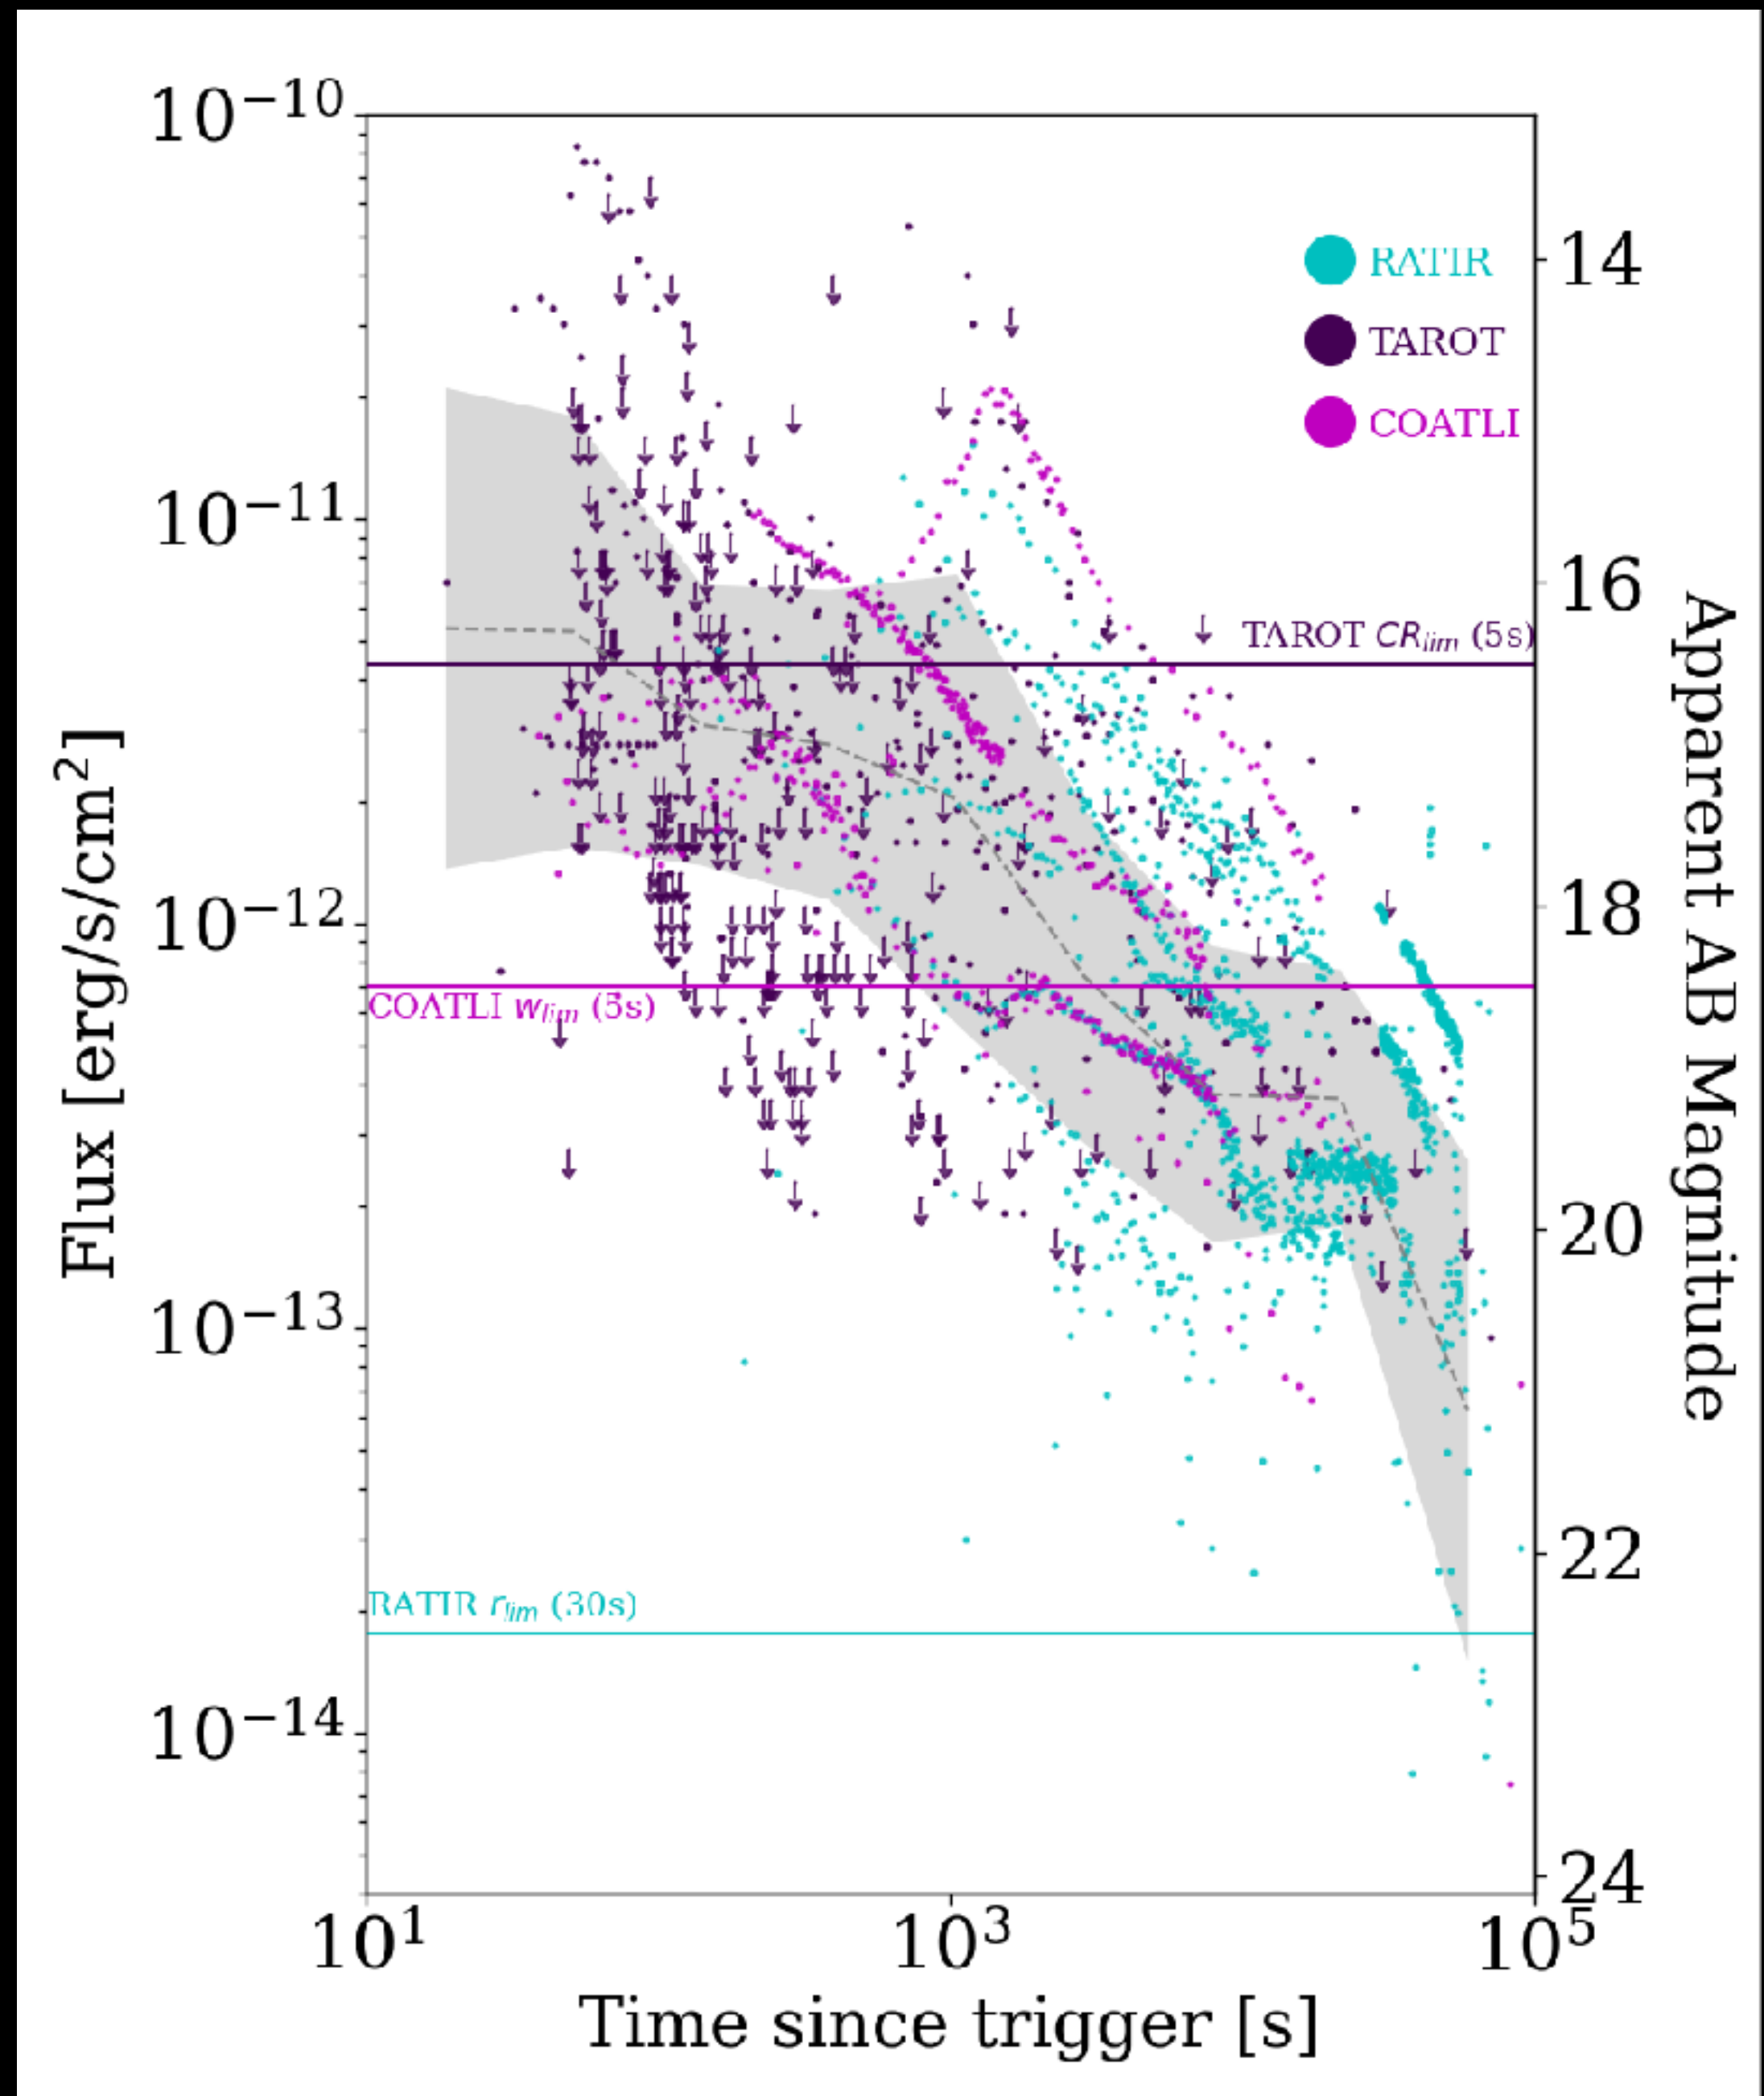

# Our sample

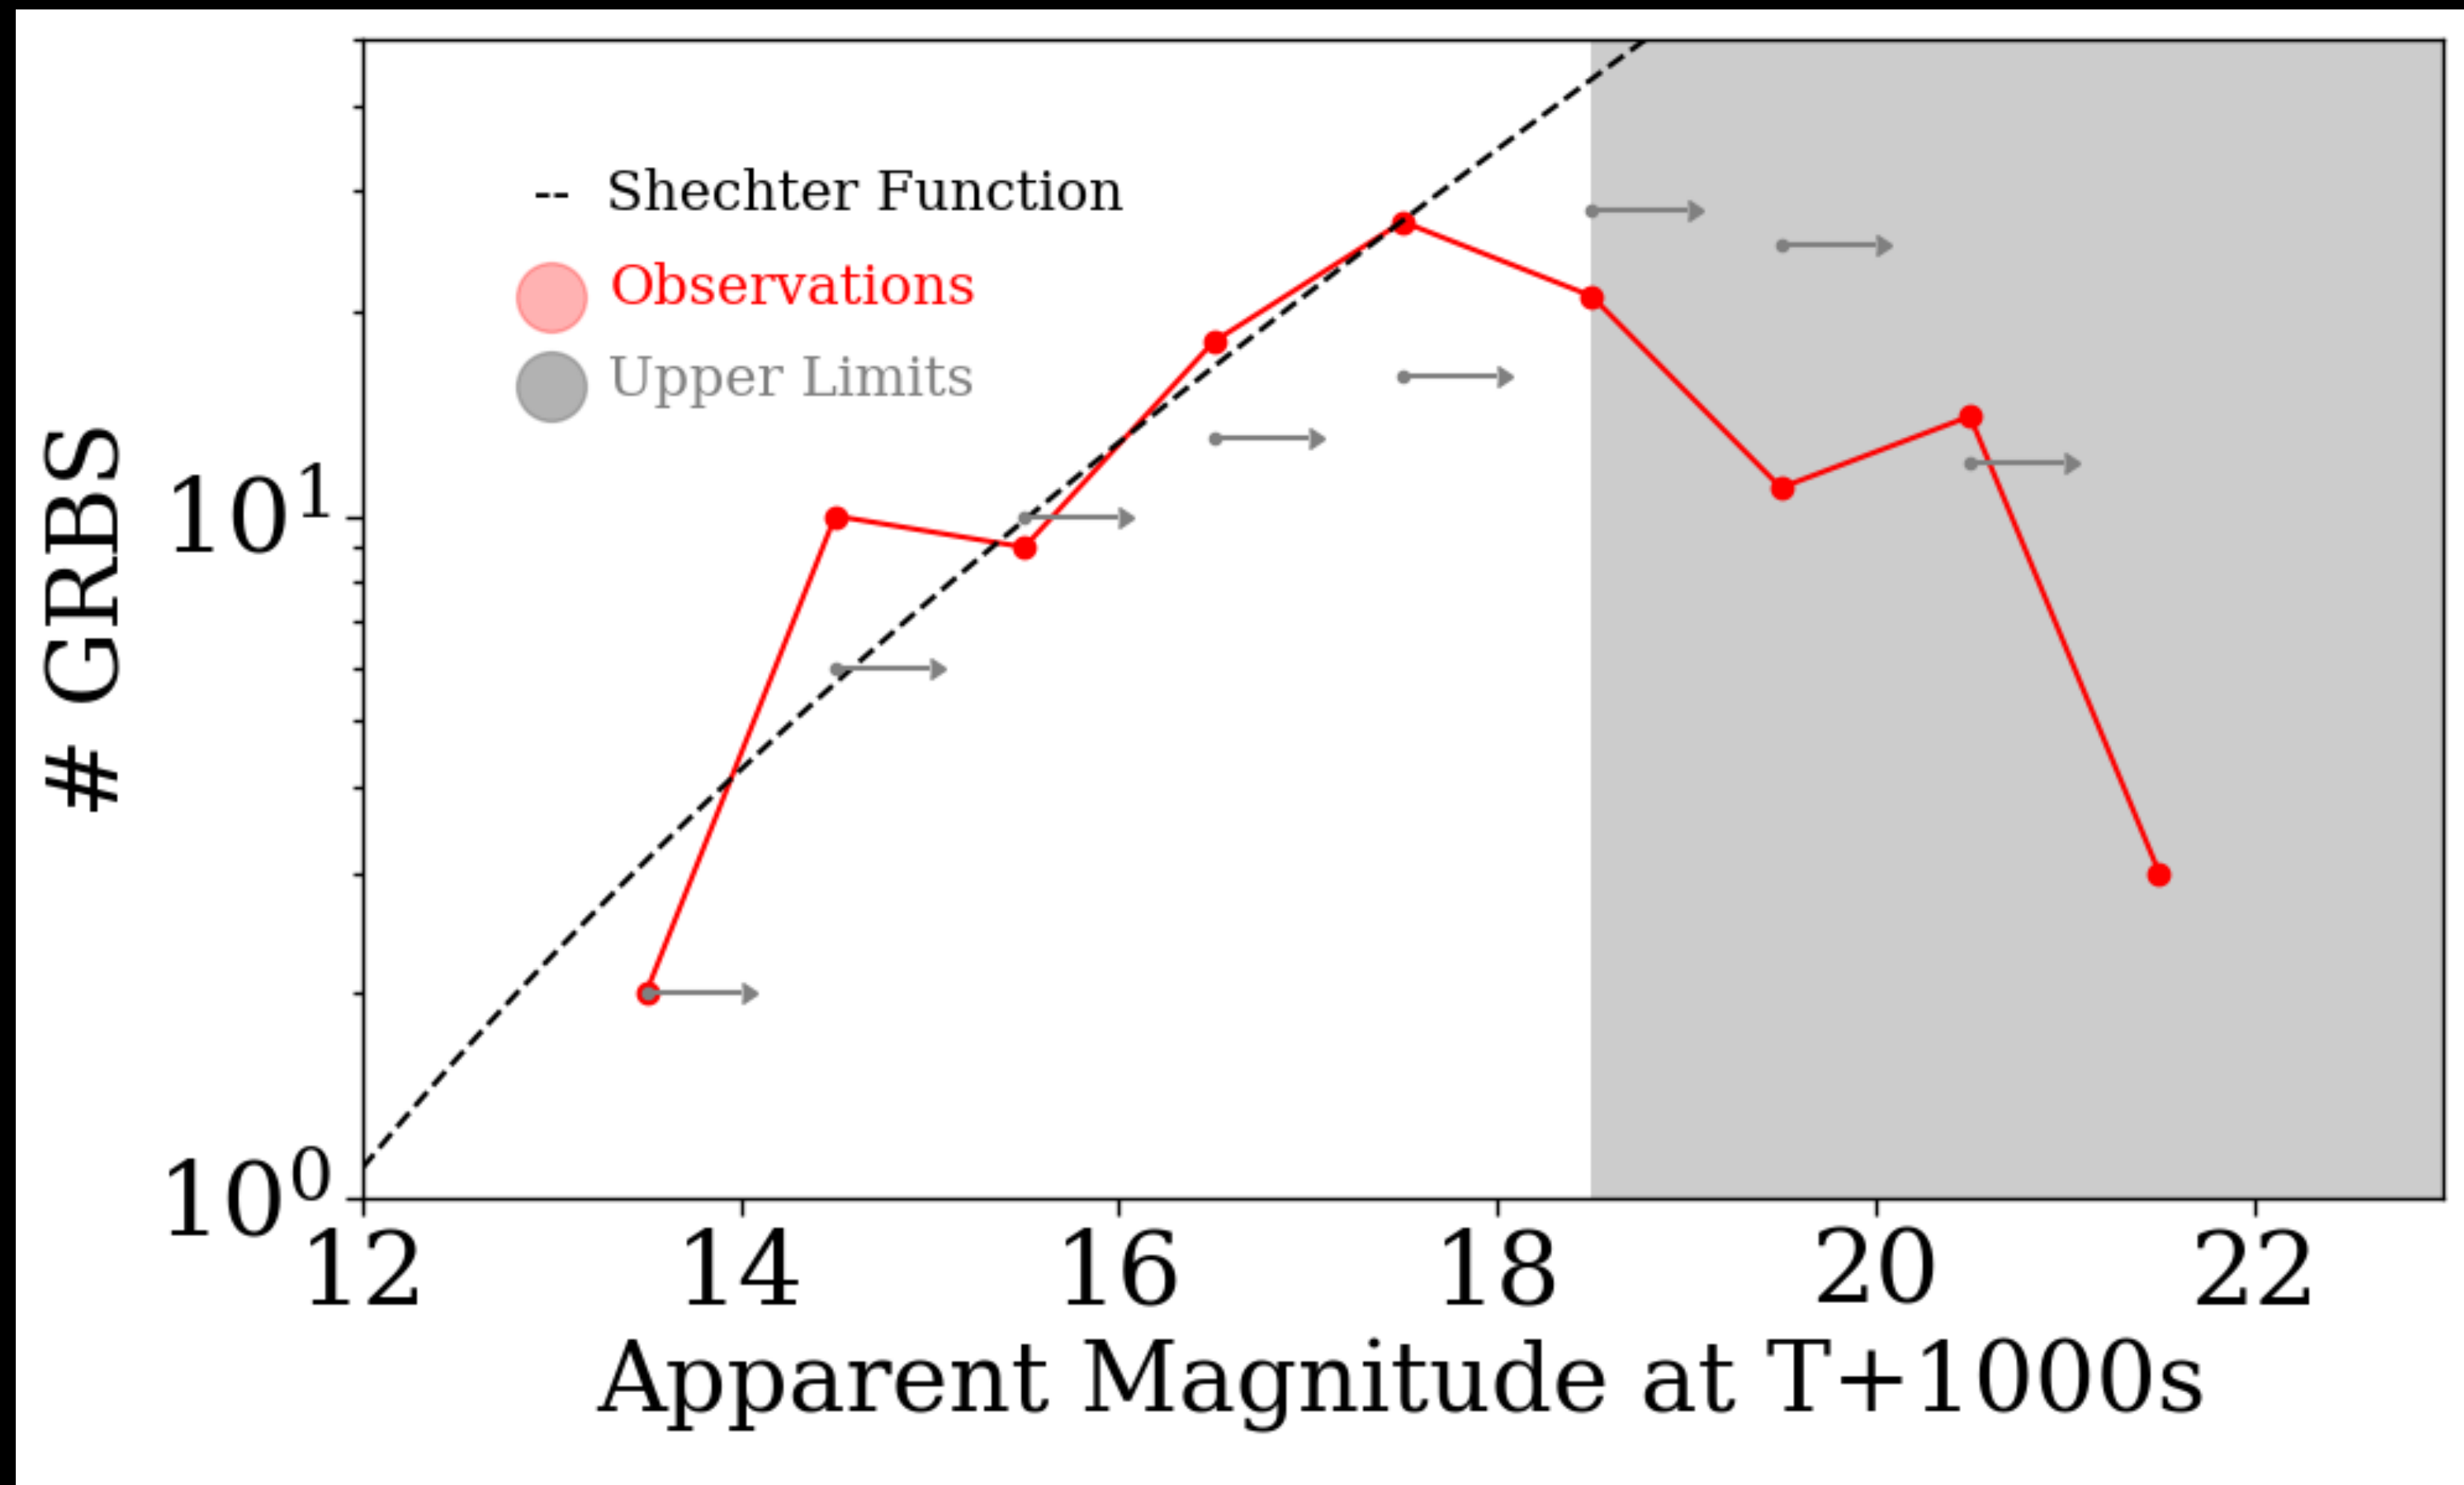

- 224 GRBs
- R/r/w data
- Duration (T90)
- Redding values

In the observer  
frame

# Luminosity Function

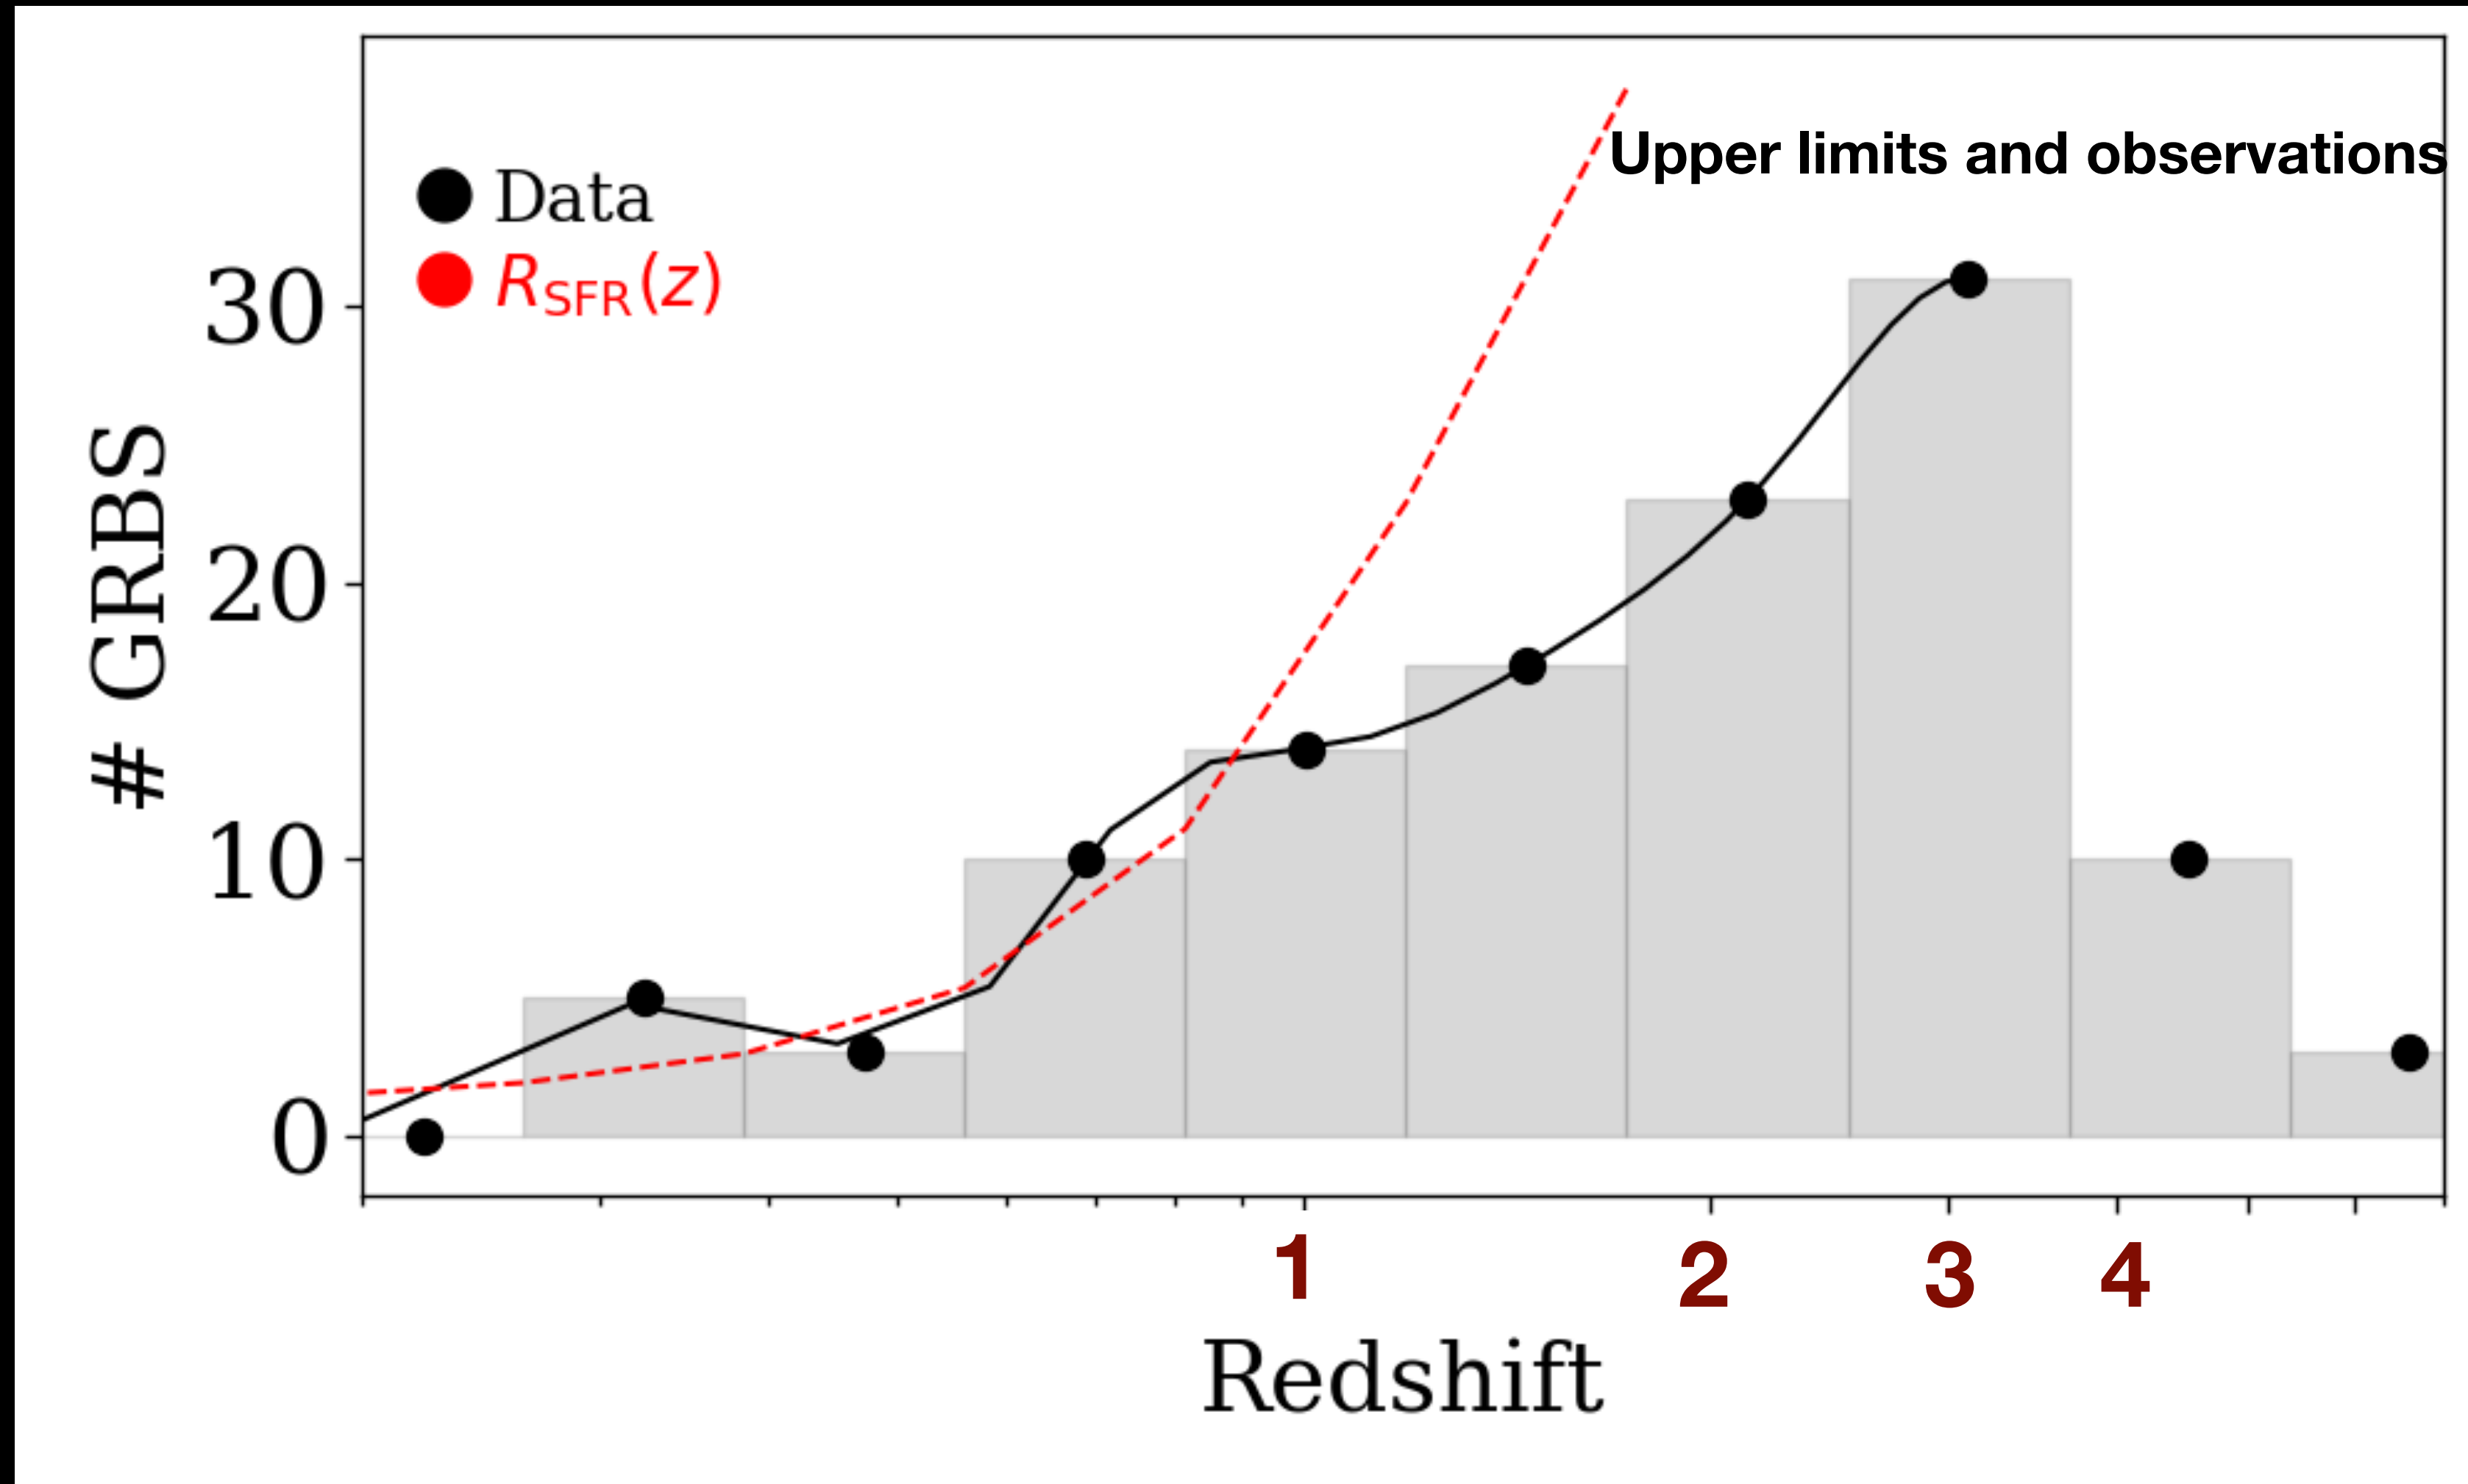

- For observers: what is the bright of GRBs found with these facilities

# Redshift distribution

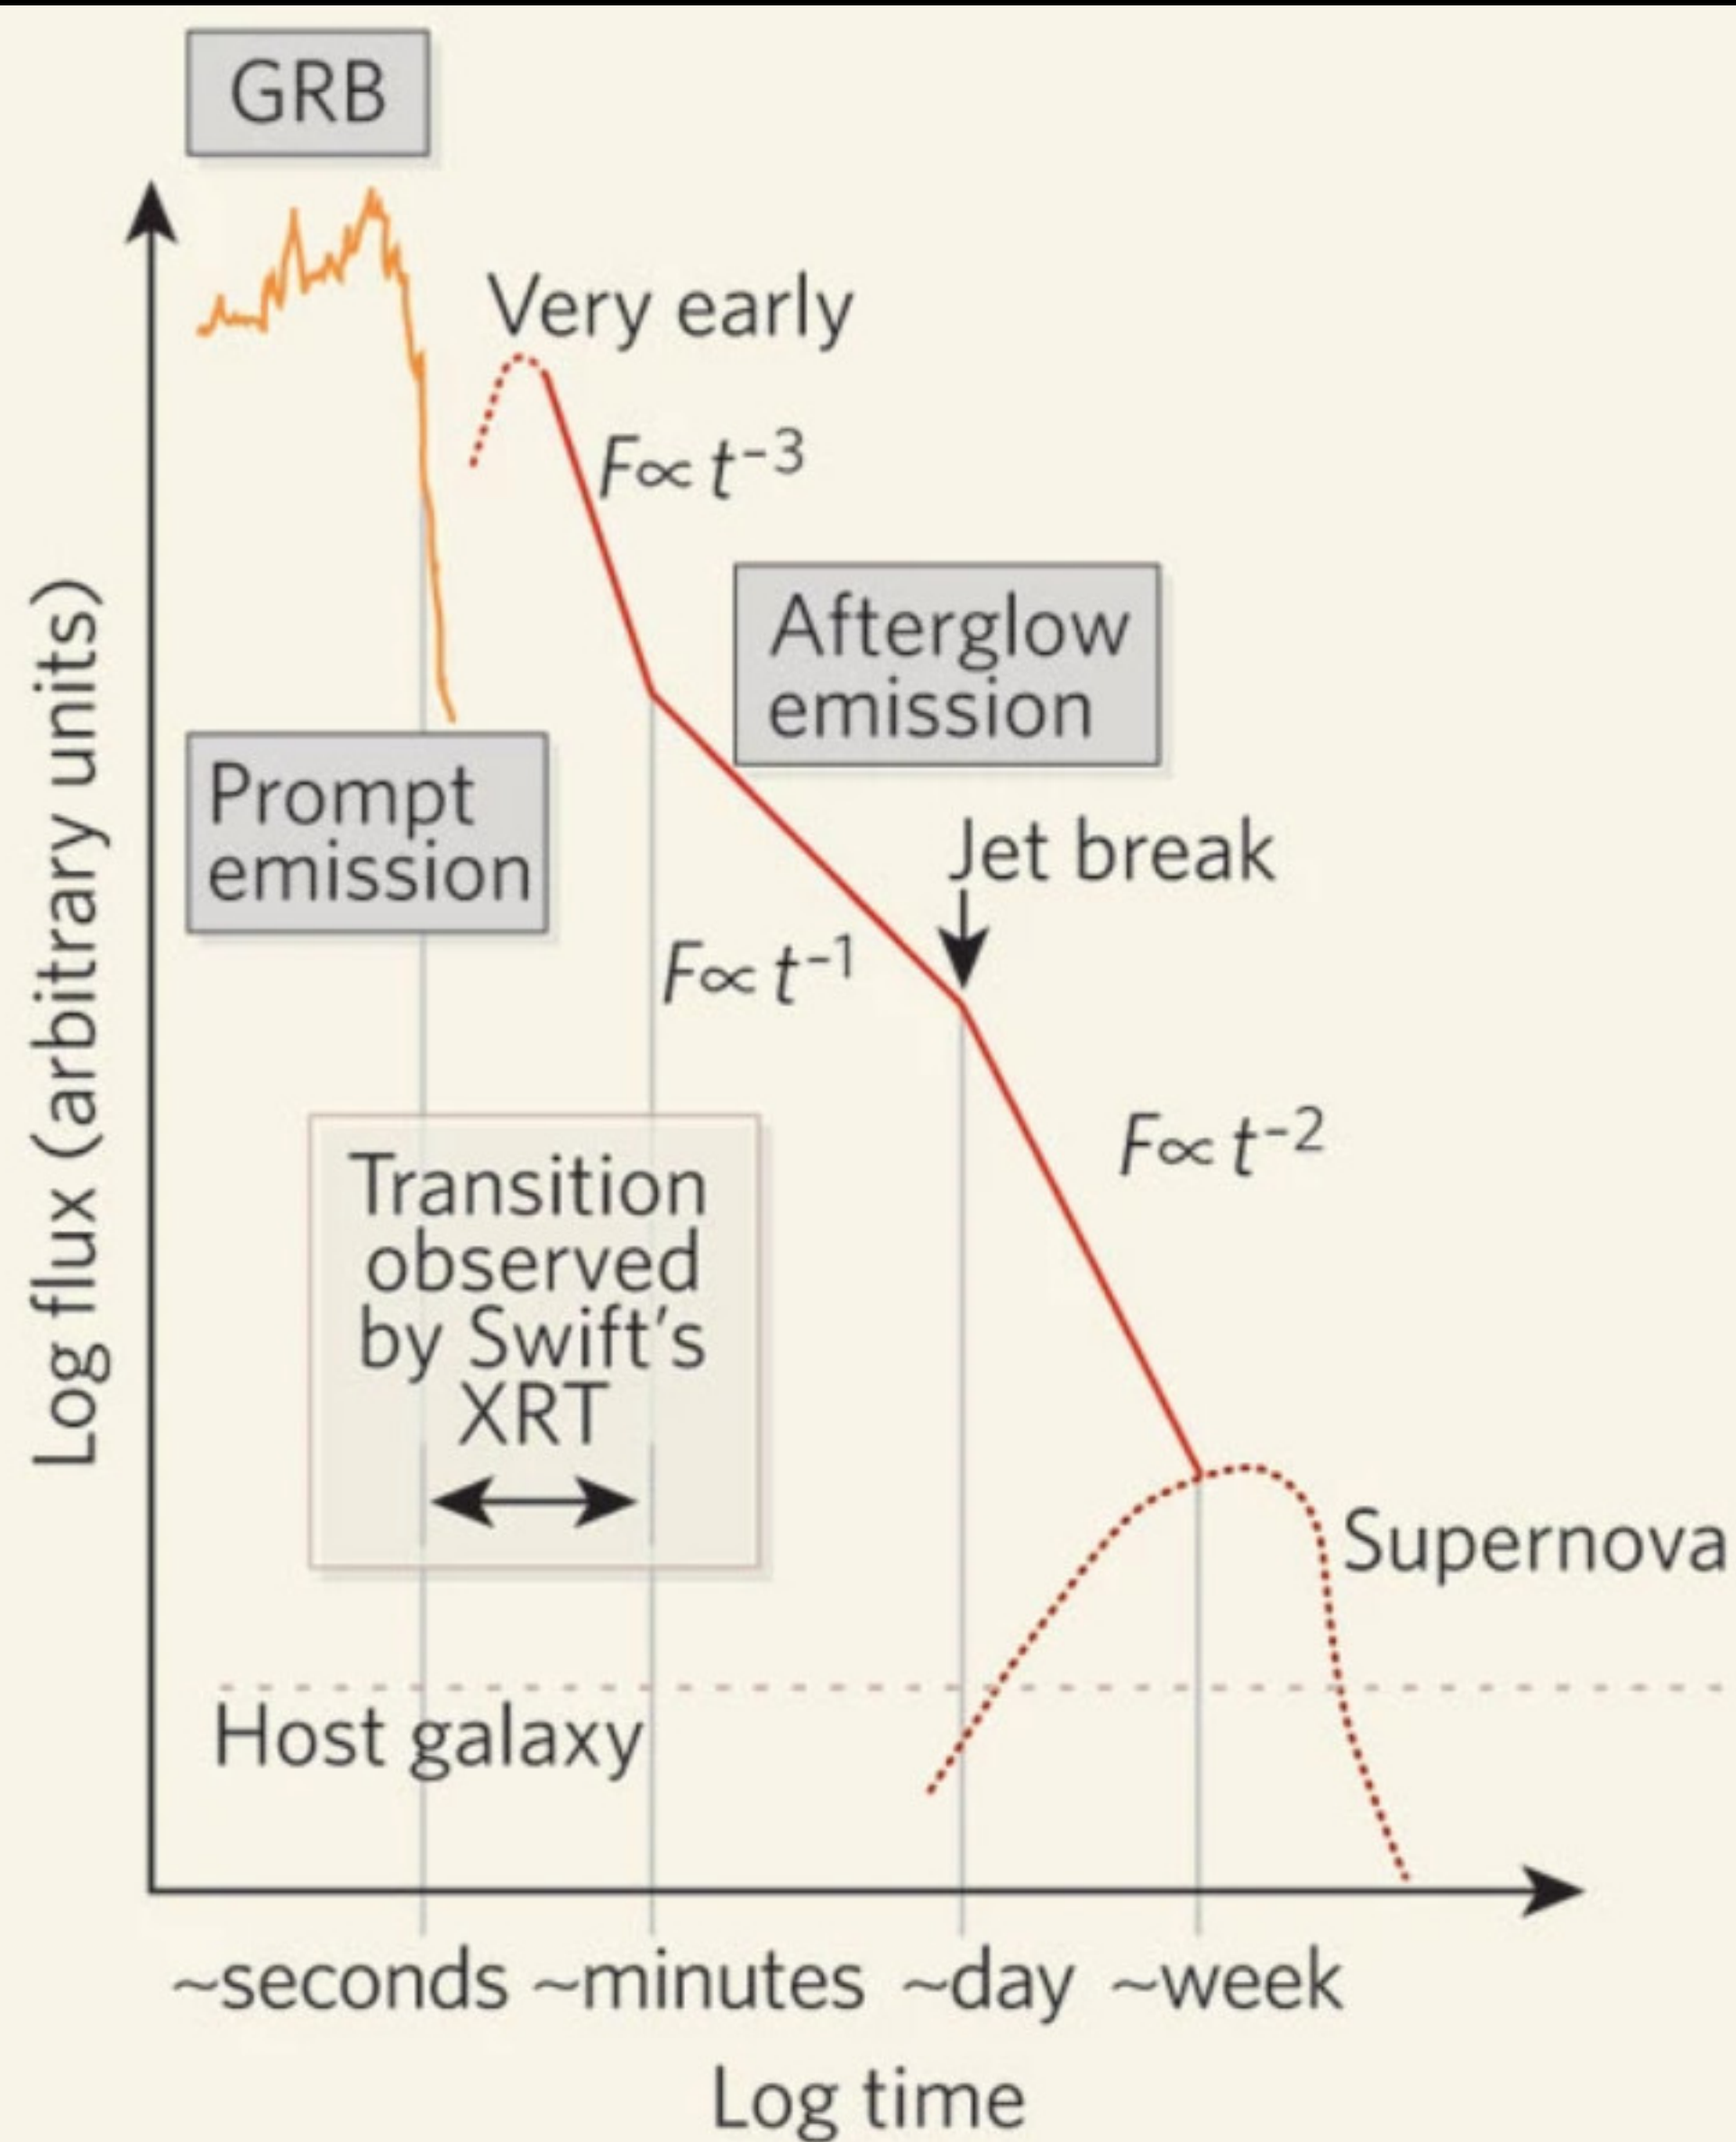

Becerra et al. 2023b (in prep.)

- What is the rate of GRBs?

Histogram of redshift distribution 52% of our sample. Detections and upper limits

# Rest frame

**We were constraint to:**

**Brightness**

**Distance (near)**

# Plan for the arrival of SVOM-COLIBRÍ?

- SVOM trigger
- Follow-up by COLIBRÍ & others

# Plan for the arrival of SVOM-COLIBRÍ?

- Let's take advantage of the technology
- Use all the data bases that we have
- Machine Learning

# Plan for the arrival of SVOM-COLIBRÍ?

- Analysis of gamma-ray light curves from SVOM using ML
- Comparison in real time (BAT → SVOM)

See Keneth's presentation in a couple of hours  
ClassiPyGRB

The logo for ClassiPy GRBs. It features a stylized starburst graphic above the text. The word "ClassiPy" is written in a multi-colored font (C: red, l: orange, a: yellow, s: green, i: blue, P: purple, y: red), and "GRBs" is written in a solid purple font.

ClassiPy GRBs

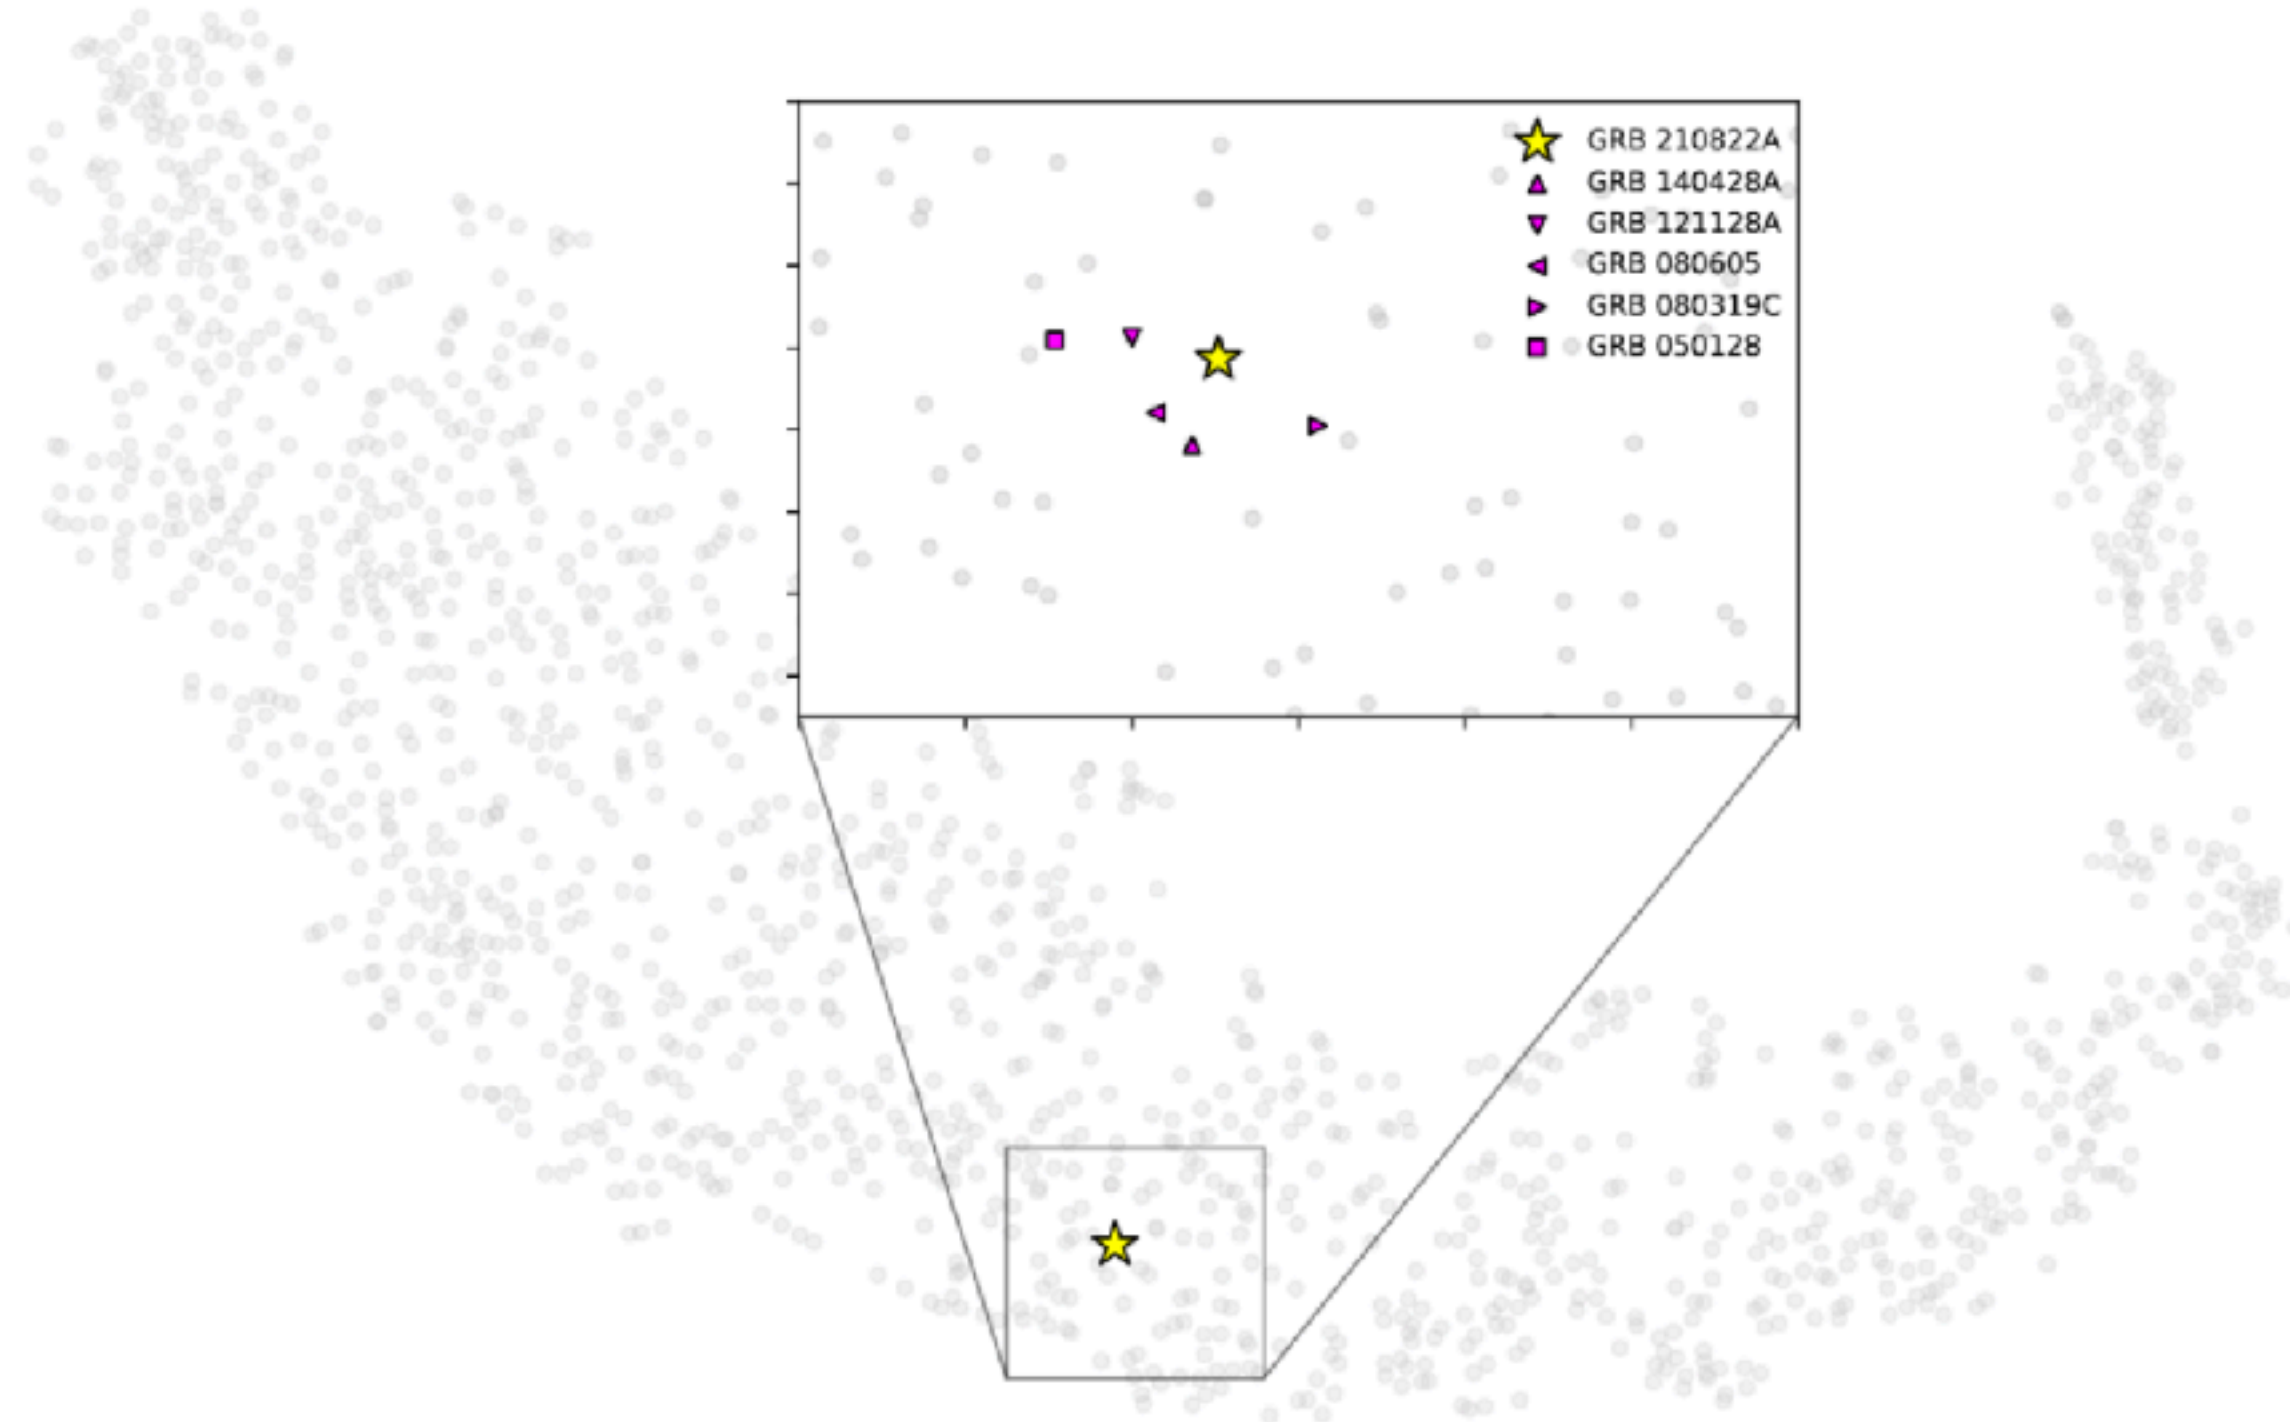

★ GRB 211211A  
★ GRB 060614

# Example

- Identification of extended emission GRBs candidates by distance between other events.
- Remove the human error of classification

# Plan for the arrival of SVOM-COLIBRÍ?

- Mapping every event we find similarities

# Interesting sources

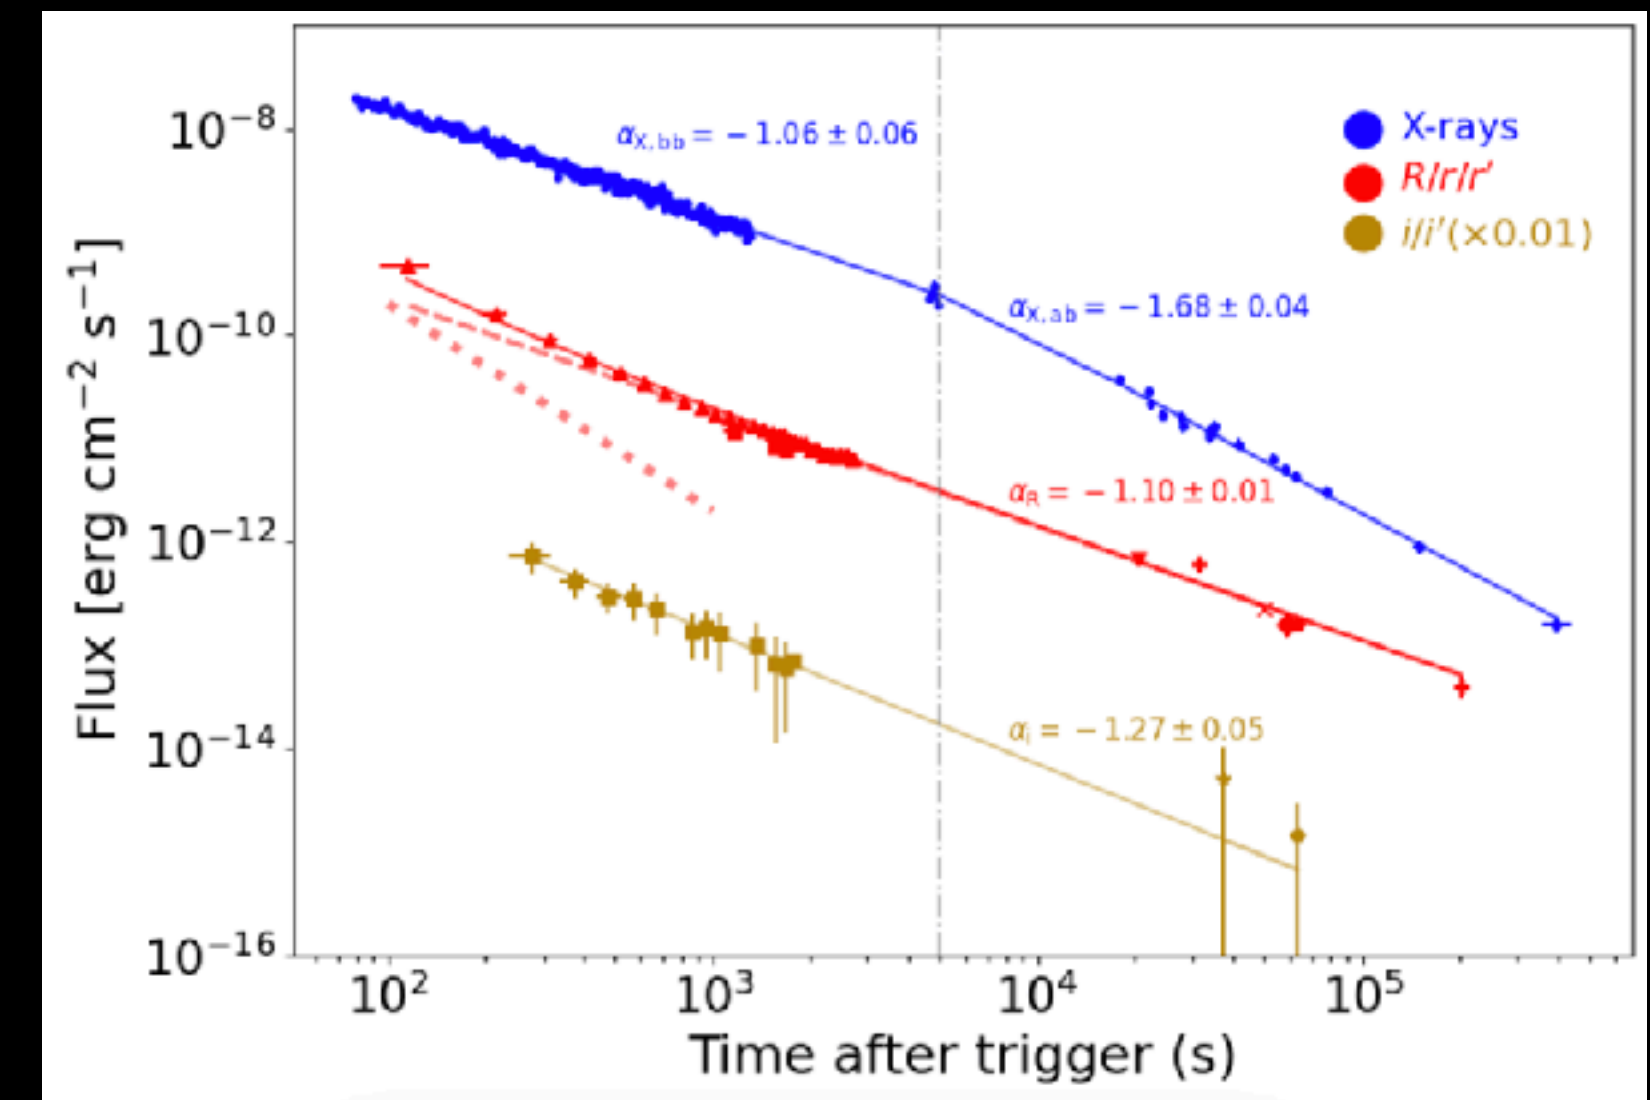

## GRB 210704A

Exotic origin  
Ambigú classification  
Becerra et al. 2023a

## GRB 191016A

Very long late central activity  
Pereyra et al. 2022

## GRB 210704A

Very luminous event  
Reverse shock component  
Angulo-Valdez et al. 2023 (in prep.)

# Plan for the arrival of SVOM-COLIBRÍ?

- Photometric analysis
- AFTERGLOWPY fit within the *Fireball Model*

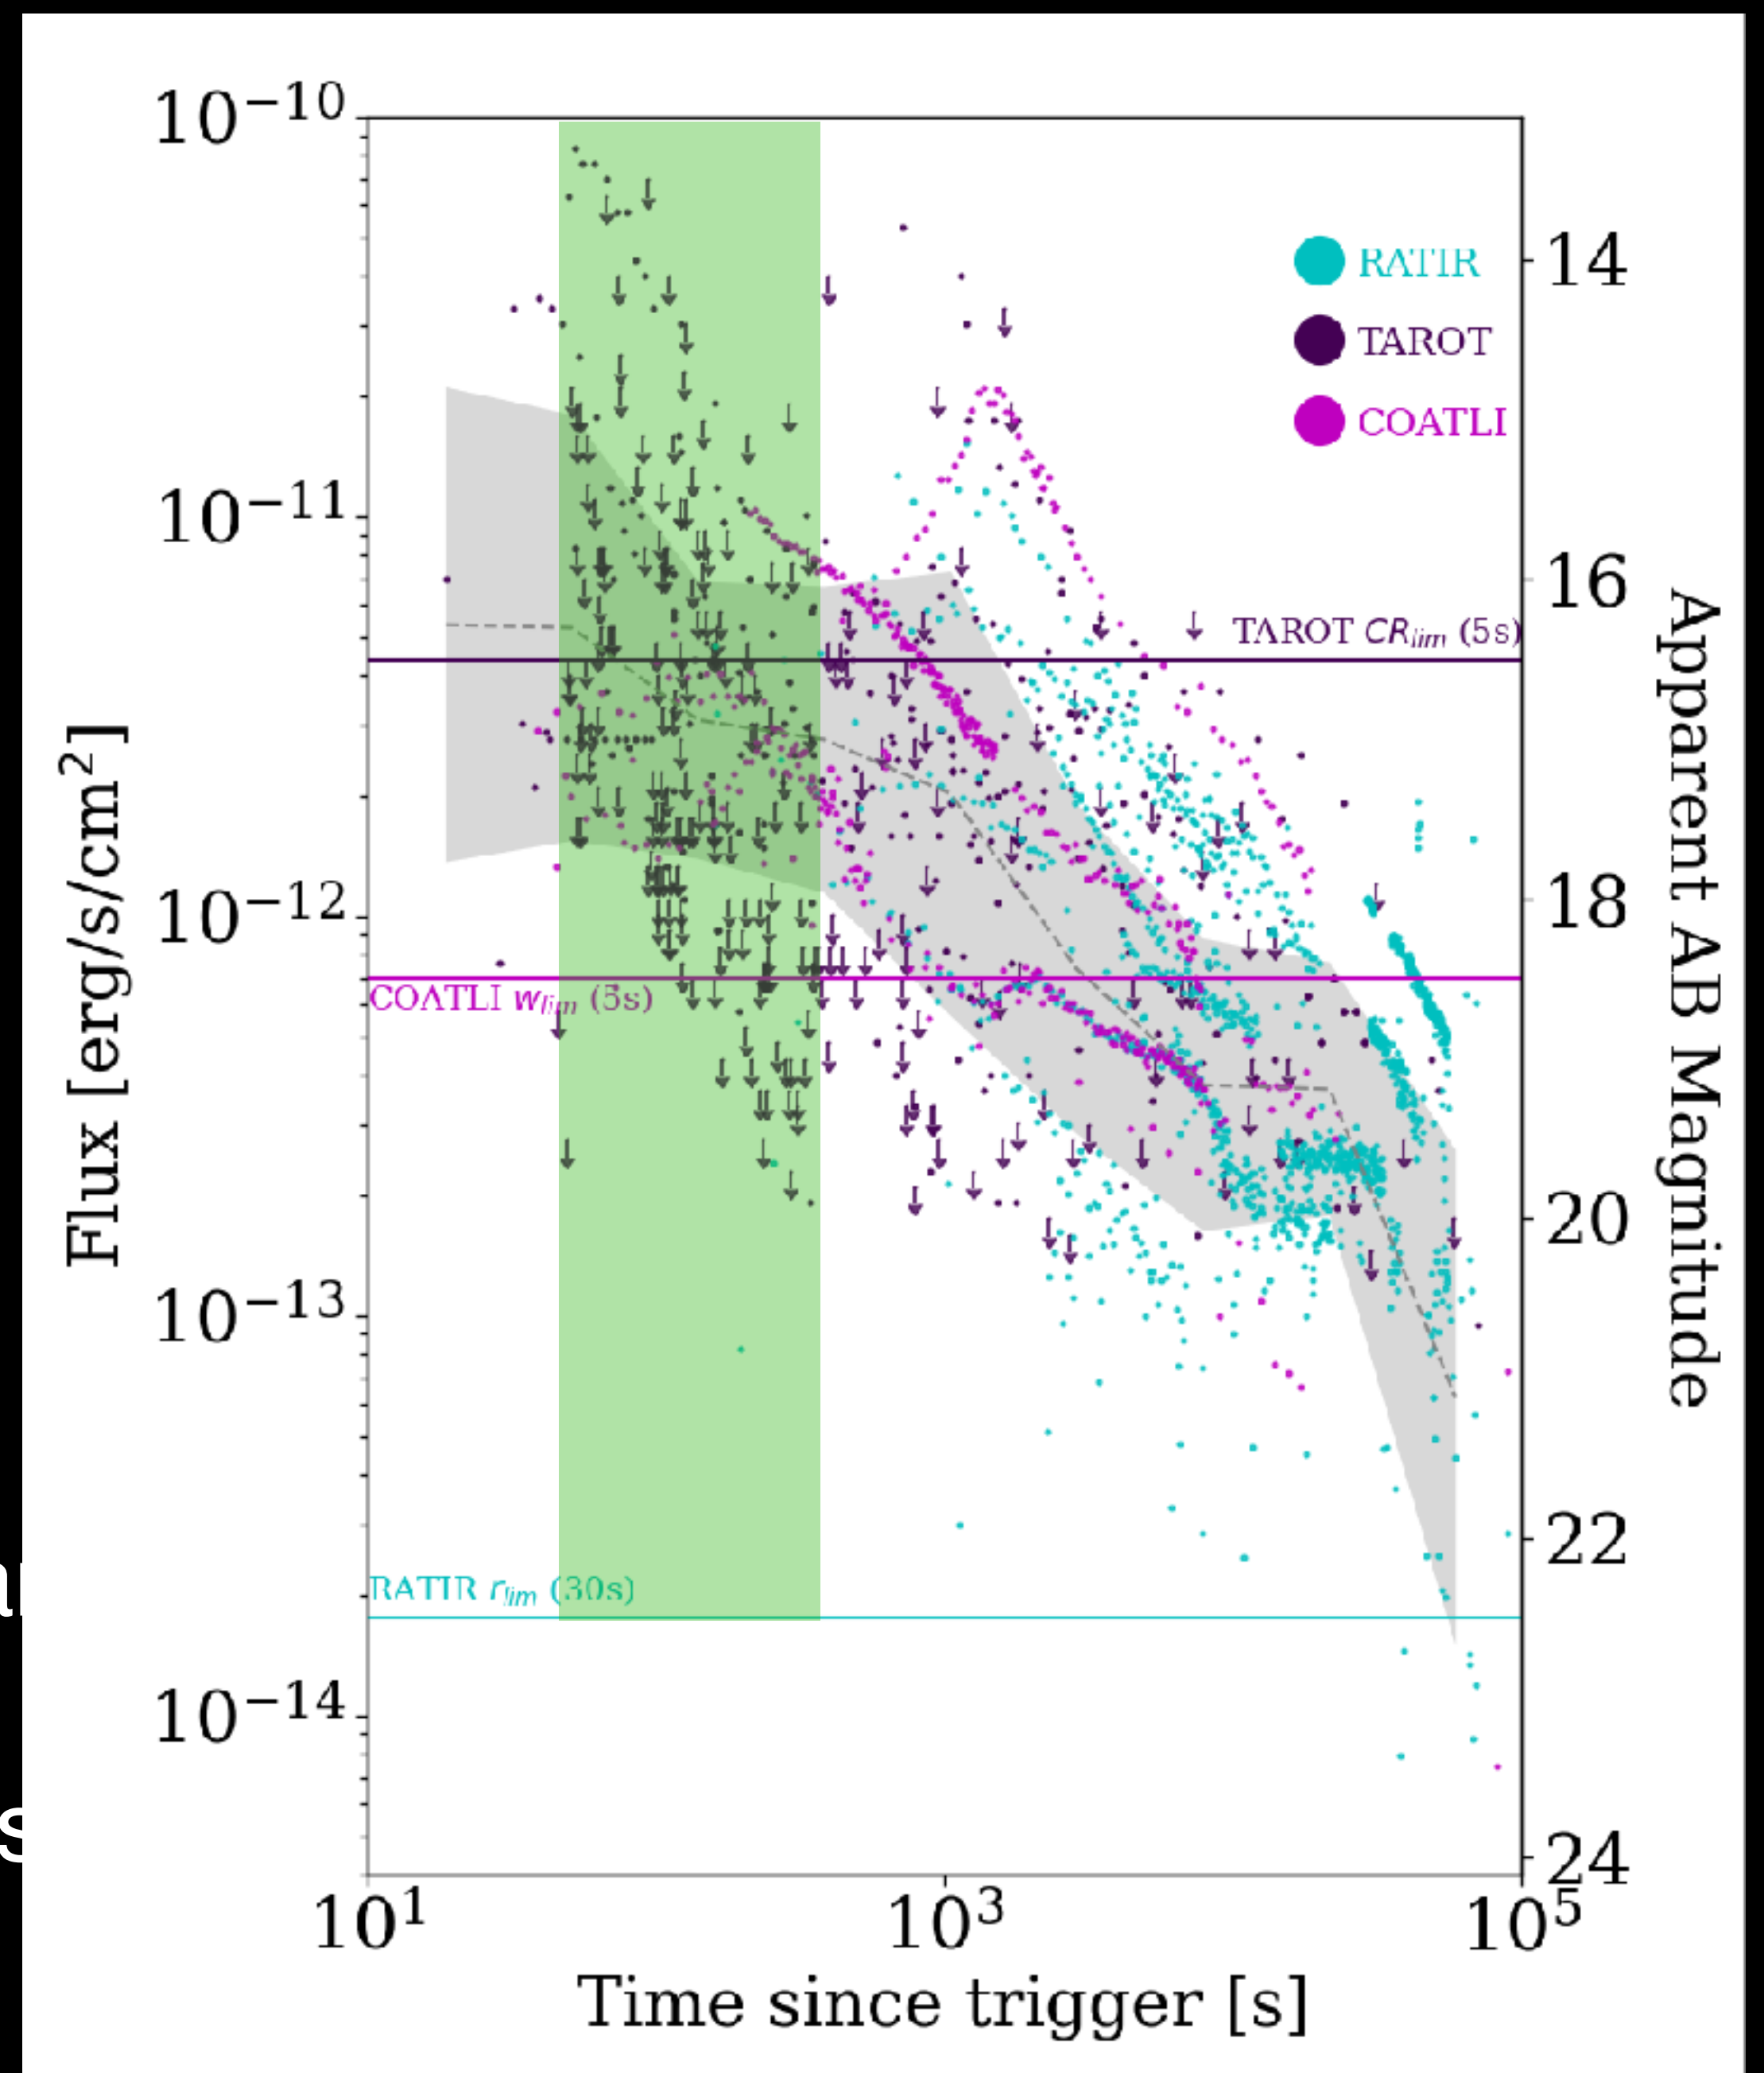

M.Sc. Thesis: Analysis of optical photometry of GRBs

- What are the best set of parameters to describe a GRB?

# Plan

- Trigger by SVOM
- Analysis of prompt emission (gamma-ray light curve) comparing with BAT
- Identification of similar events.
- **Is this relevant?**
- Determination of follow-up with other facilities (GTC/Chandra/LDT/Gemini/Subaru)
- Characterization/analysis of specific GRBs
- Dark GRBs

# Thanks for your attention
