## Wide Field Optical Surveys

**Real-time**

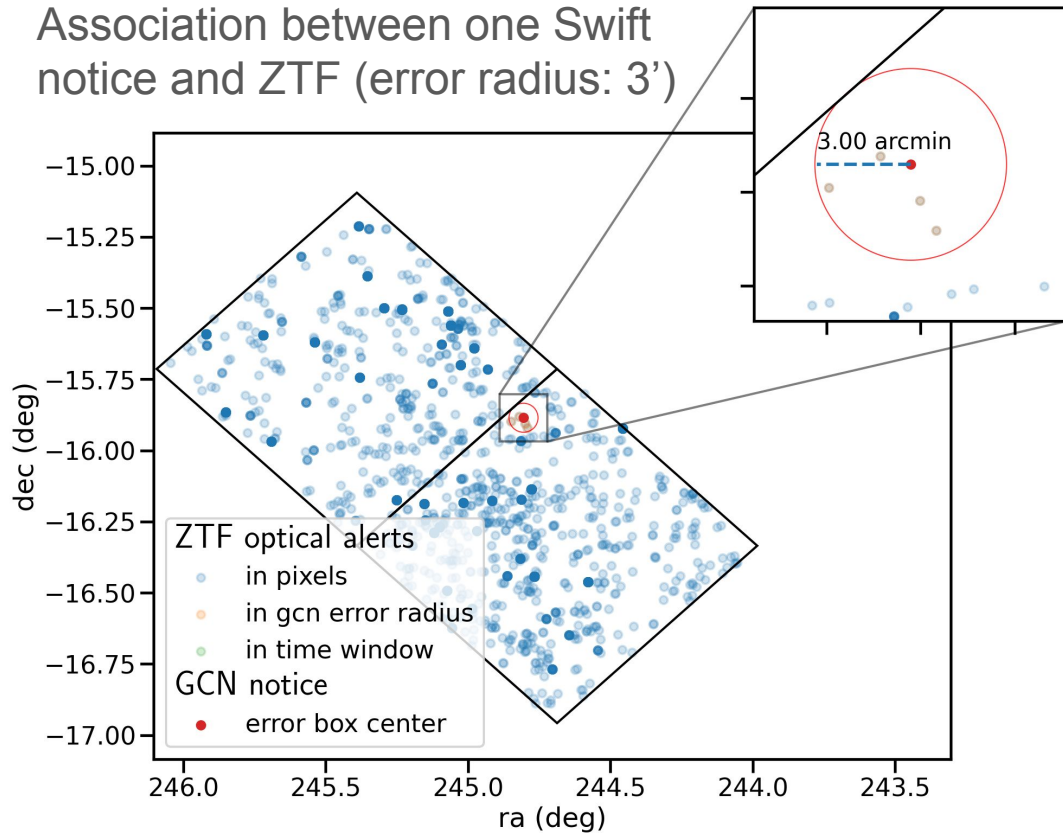

## High Energy Universe

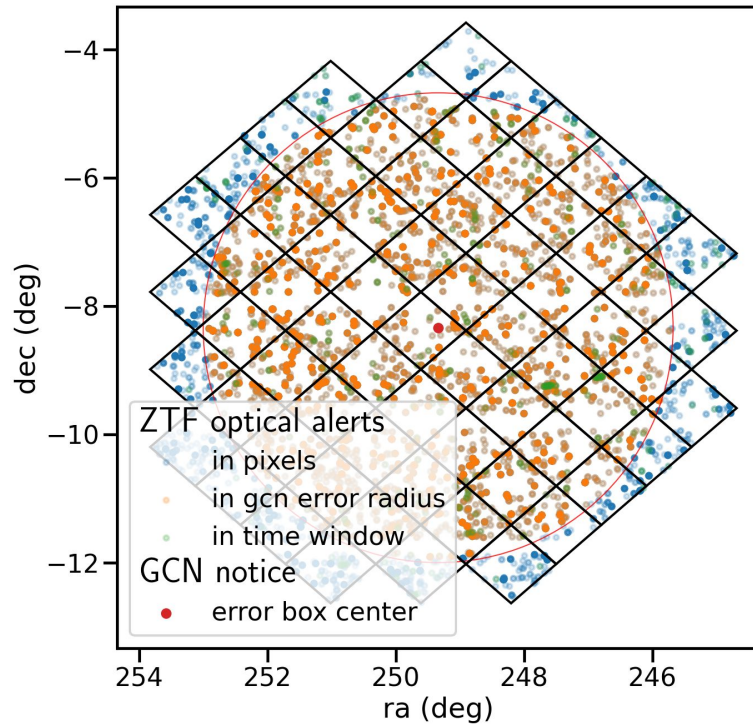

**Public**

# Fink-MM examples

Association between one Swift notice and ZTF (error radius: 3')

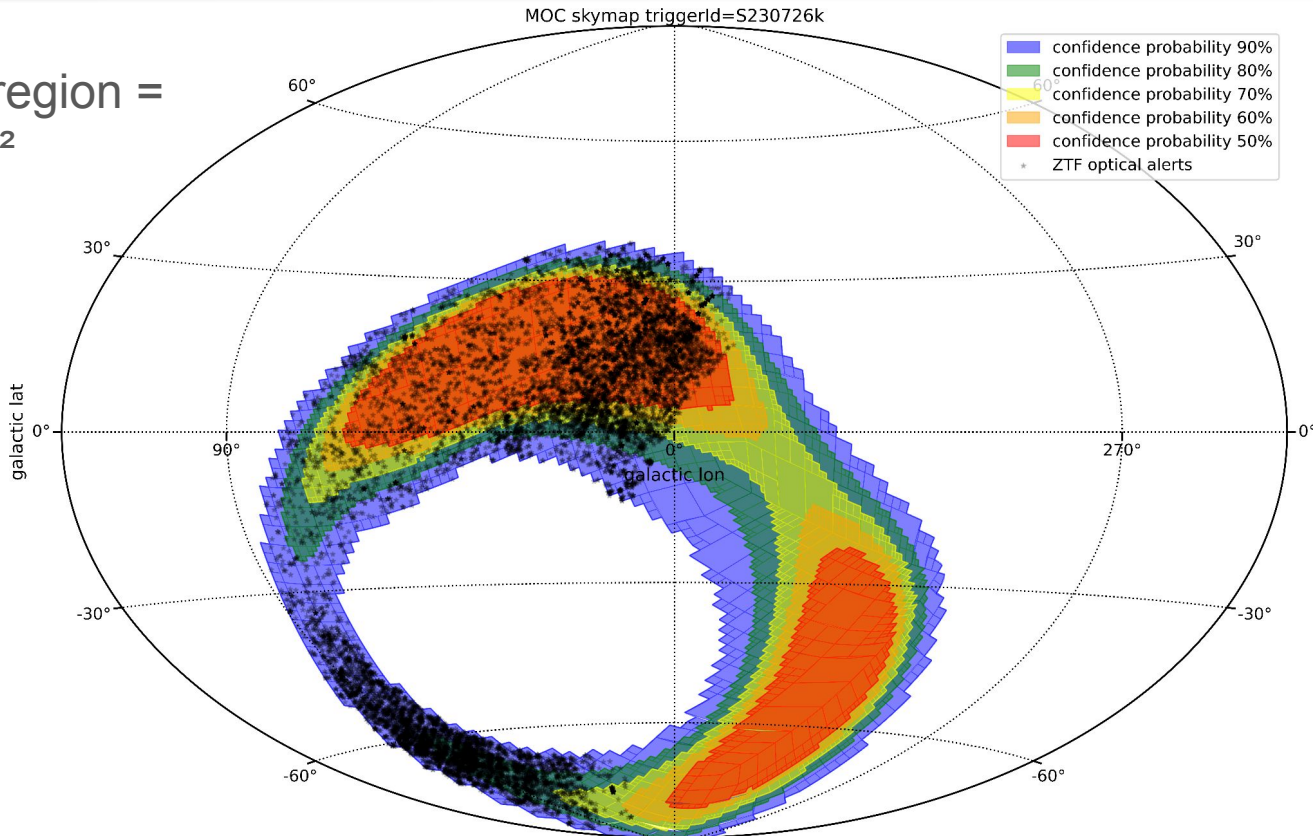

Association between one Fermi notice and ZTF (error radius:  $\sim 3.6^\circ$ )

# Fink-MM examples (o4a)

90% area region =  
~8000 deg<sup>2</sup>

# Dataset and configuration

---

Period: from 2023-05-29 to 2024-01-16

ZTF number of alerts: 24,852,814 (154,365 alerts / night)

GCN number of notices: 3,383 (~16 notices / day)

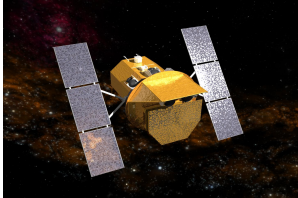

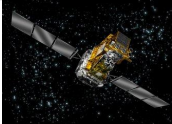

## Fink-MM configuration

- Healpix Map Resolution =  $N_{\text{side}} = 64$  (~55 arcminutes per pixels)
- PAN-STARRS and GAIA filter threshold: 2 arcseconds
- MPC filter threshold: 5 arcseconds
- Time window: 20 days (cut at 10 days for GW)

# Results - GRB

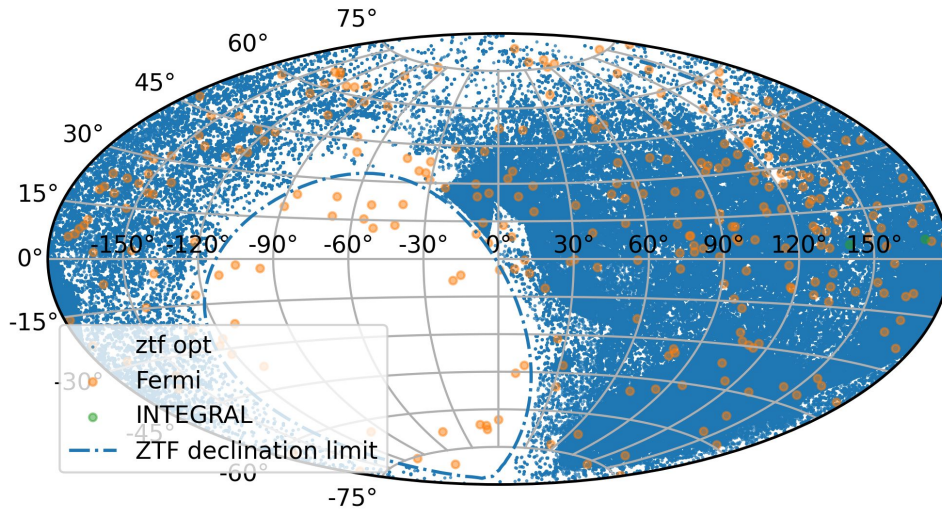

- 690 unique events from the GRB observatories

| Observatory  | number of unique events | Notices per instruments                                  |
|--|-------------------------|--|
|  Fermi        | <b>63.48%</b>           | GBM: 99.5%   |
|  |                         | LAT: 0.5%  |
| Swift<br>     | <b>13.91%</b>           | BAT: 86.95%  |
|  |                         | XRT: 12.27%  |
|  |                         | UVOT: 0.78%  |
| Integral<br> | <b>22.61%</b>           | IBIS: 100% (weak: 89.2%,<br>wakeup: 6.6%, refined: 4.2%) |

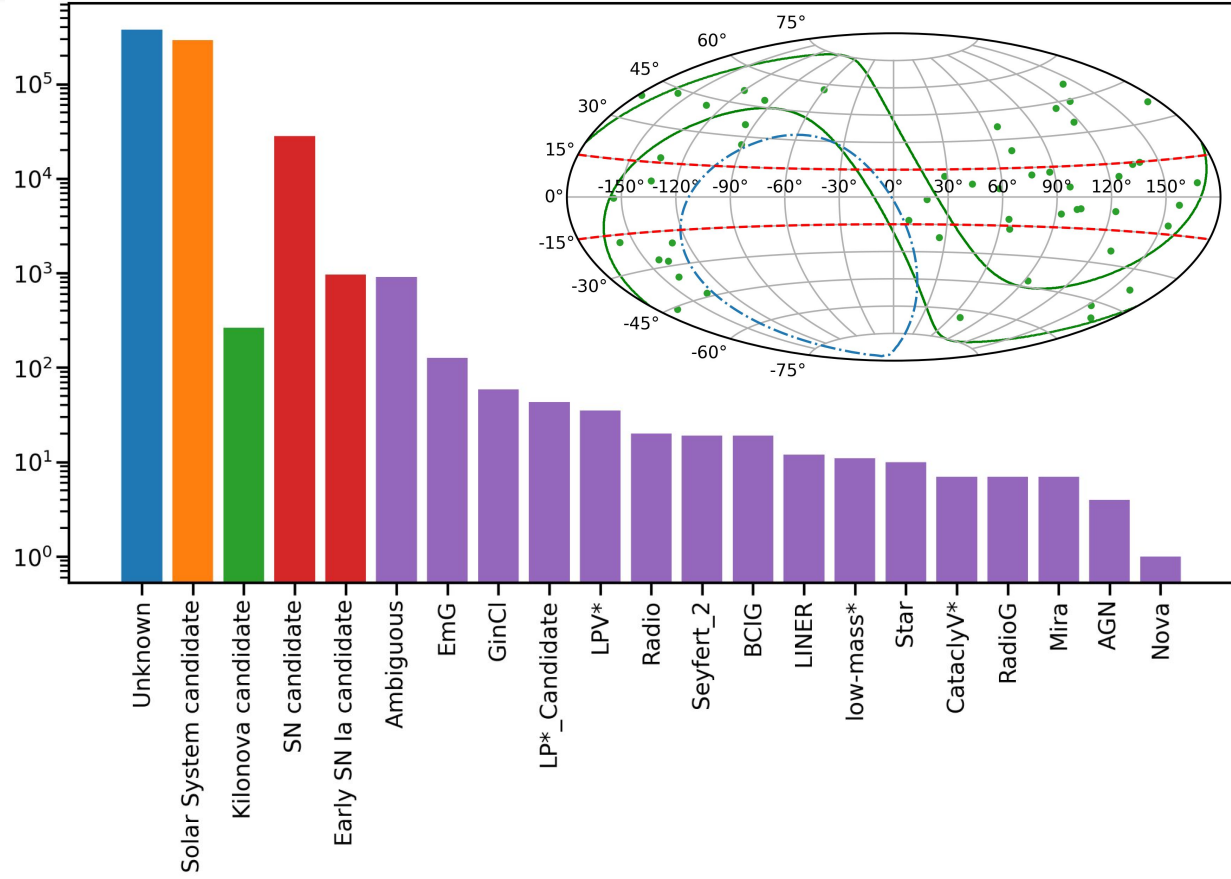

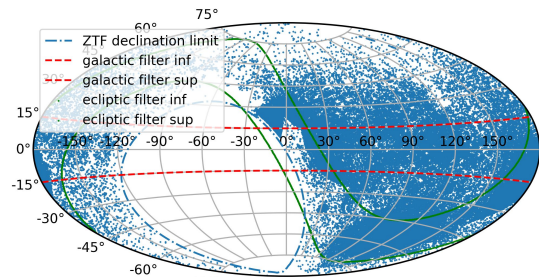

# Results - GRB

- **42% of unique GCN events** with positive match in ZTF based on the spatial and temporal condition
  - Fermi: 702,613 (2.8%) ZTF matches with notices (~ 3,123 match / night)
  - Integral: 2 matches from weak notices
  - Swift: 0 match with any of the BAT, XRT or UVOT notices

# Results - GRB

# Results - GRB

---

Stringent quality cuts + selection based on Fink classifiers

36.15 % (401.61 alert / night)

Bronze + *serendipitous probability* above 5 sigma

Only 9 alerts

Silver + fast transient behaviour

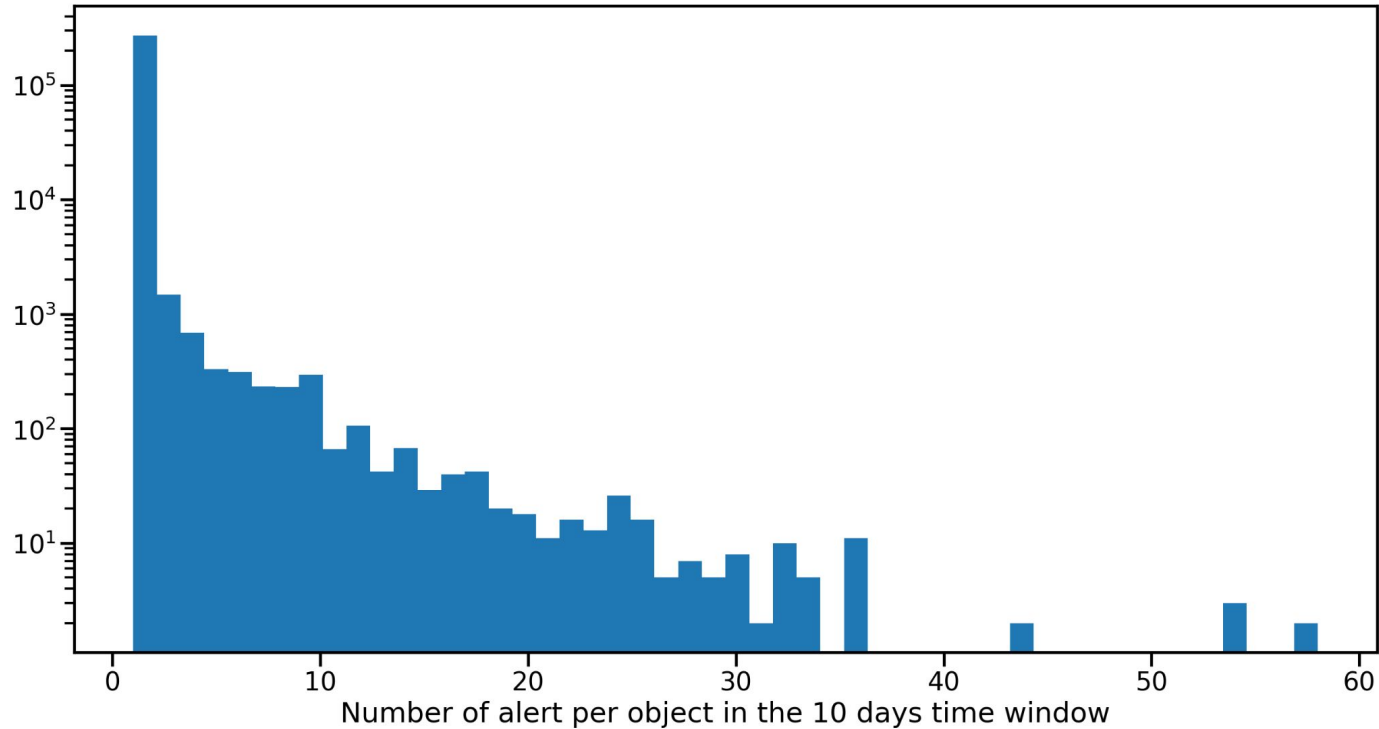

0 alerts

# Results - GRB

- Bronze alerts

# Results - GRB

---

- **Bronze alerts**
  - Increase knowledge with more catalogues in other wavelength
  - catalog condition: astrometry as precise as ZTF (around the arcsecond)
    - Gaalex UV catalog (82,992,086 sources)
      - 0.80 %
    - AllWISE mid-infrared catalog (747,000,000 sources)
      - 2.03 %
    - Very Large Array Sky Survey VLASS radio catalog (3,400,000 sources)
      - 0.01 %
    - Artificial Satellites Fink offline science module
      - 6.10 %

# Conclusion/Discussion

---

- Real-Time crossmatch between optical survey and high energy observatories
  - Implemented through the Fink-MM framework
  - Fully customisable and scalable to millions of alerts per night
- Tested over 9 months of ZTF observation with simple filters
  - Bronze (94,809 matches), Silver (9 matches), Gold (0 match)
  - One confirmed GRB optical afterglow
  - Unknown with one point: What are they? (cosmic rays, asteroids, star flares, other, ...)
  - Further catalogue cross-match did not reveal more information
- Lessons learned from this first cross-matching campaign
  - MMA pipeline in place in Fink, but it requires further optimization for Rubin
    - Refining of the selection criteria for candidate
  - Access to the full stream is absolutely necessary

# Backup

---

# Results - GRB

---

Fink-MM filters:

- Bronze: real bogus score  $> 0.7$  and class belonging to Unknown, Ambiguous and extra galactic (SN, KN, ...)
  - 36.15 % returned as bronze (401.61 alert / night)
- Silver: bronze condition and serendipitous probability above 5 sigma
  - only 9 alerts from the 702,615 alerts returned by Fink-MM
- Gold: silver condition and magnitude rate above 0.3 magnitude per day (rising or fading)
  - 0 alert
