Extraction of the speed of sound in hot QCD matter at the LHC

jeudi 7 novembre 2024 15:55 (25 minutes)

In this presentation recent extractions of the speed of sound in hot QCD matter are discussed. The measurements are performed using two different analysis techniques, which are applied in PbPb collisions at the LHC with center-of-mass energy per nucleon pair of 2.76 and 5.02 TeV. Special focus to the experimental techniques and prospects for future measurements will be given.
