

In memory of Angelo Pagano

CHIMERA (Charged Heavy-Ion Mass and Energy Resolving Array)

The largest 4pi detector in the nuclear physics community: CHIMERA... the "ALICE of low energy HIC"

Some of the contributions to Femtoscopy and to WPCF

- Three-fragment correlations: *time-scales* in emission of fragments from the neck in mid-peripheral heavy-ion collisions
- Two- and three-alpha particle correlations in ^{12}C Hoyle state: *Bose-Einstein condensates* states in excited nuclei
- Construction of FARCOS (***Femtoscope*** Array for ***Correlations*** and Spectroscopy) → talk by Cristina Zagami at this conference (Thursday)
- Angelo as organizer of the IX edition of WPCF, in Acireale, on November 5-8, 2013

Ciao Angelo!

Peace and love to your family
