Solution to the binary black hole system with arbitrary spins, eccentricity, and masses at the second post-Newtonian order

jeudi 7 novembre 2024 15:40 (20 minutes)

We present an analytical solution to the binary black hole system with arbitrary spins, eccentricity, and masses at the second post-Newtonian order. This solution owing to its analytical nature is expected to facilitate quick gravitational wave (GW) template generation and accelerate GW detection and parameter estimation.
