

Decay-mode independent searches for new light scalars at future Higgs factories

Teresa Núñez - DESY

- Previous studies
- Current analysis:
 - motivation
 - analysis flow
 - preliminary results (work in progress)
- Conclusions and outlook

Third ECFA Workshop on e+e- Higgs/Top/EW Factories
Paris, October 2024

Previous studies

Higgs factories are specially suited for searching at new scalars in the process $e^+e^- \rightarrow ZS^0$

Model independent searches are based on the recoil of the new scalar against the Z

Independent fo the S^0 decay mode

Studies were performed using the full detector simulation and reconstruction procedures of the ILD at the ILC for $\sqrt{s} = 250/500$ GeV

- Detector and beam conditions were not the current ones
- Focused on the decay of the Z to two muons

[arxiv:1902.06118](https://arxiv.org/abs/1902.06118)

[arxiv:2005.06265](https://arxiv.org/abs/2005.06265)

Previous studies (ctd.)

[arxiv:1902.06118](https://arxiv.org/abs/1902.06118)

[arxiv:2005.06265](https://arxiv.org/abs/2005.06265)

$$e^+e^- \rightarrow Z' \rightarrow ZS^0 \rightarrow \mu^+ \mu^- S^0$$

Expected sensitivities at 95% CL for the cross section scale factor with respect to the SM Higgs, $\sin^2(\theta)$, for scalars masses between 10 and 410 GeV

Motivation and conditions current studies

Reimplementation of previous analysis with current experimental conditions and full simulation software

Full detector simulation and reconstruction procedures of the ILD at the ILC for $\sqrt{s} = 250$ GeV

Different Z decays modes want to be covered

Samples:

- Background using new SM 250 GeV samples generated with Whizard v.2.8.5, the SetA beam-spectrum, simulation and reconstruction with the ILD_I5_o2_v02 model, and ILCSoft v02-02-01
- Signal generated with Whizard v.2.8.5, the SetA beam-spectrum, detector simulation done by sgv.

Event selection

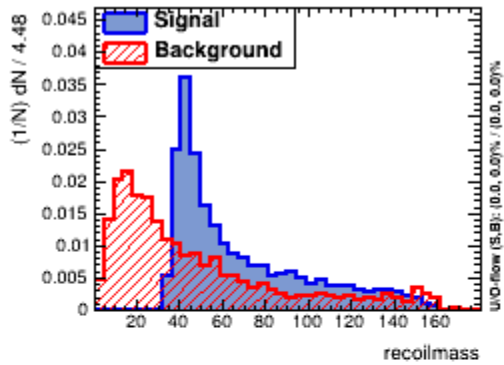

$$e^+e^- \rightarrow Z' \rightarrow ZS^0 \rightarrow \mu^+ \mu^- S^0$$

- Identification of ISR photons (IsolatedPhotonTaggingProcessor)
- Select events **without** high-energetic **ISR photon**:
 - **none** or $E_\gamma < 100 \text{ GeV}$ for $|\cos \theta| < 0.95$ or $E_\gamma < 75 \text{ GeV}$ for $|\cos \theta| > 0.95$
- Identification of isolated leptons (IsolatedLeptonTaggingProcessor)
- Select events **with two isolated muon candidates** and di-muon and recoil masses in defined ranges
 - $M_{\mu^+\mu^-} \in [M_Z - 40, M_Z + 40]$, $M_{\text{rec}} \in [0, 250] \text{ GeV}$
- Perform isolated lepton pairing (LeptonPairing)
- Cuts on **kinematic variables** (FSR corrections applied), accepted if
 - $M_{\mu^+\mu^-} \in [70, 110] \text{ GeV}$
 - $P^T_{\mu^+\mu^-} \in [0, 120] \text{ GeV}$
- Cuts on output of two BDTGs, **2f-MTVA** and **4f-MTVA**, trained against 2 fermion and 4 fermion backgrounds, respectively.
 - Input variables: M_{recoil} , $M_{\mu^+\mu^-}^{\text{FSR}}$, $\cos \theta_{\mu^+}^{\text{FSR}}$, $\cos \theta_{\mu^-}^{\text{FSR}}$, $\cos \theta_{\mu^+\mu^-}^{\text{FSR}}$, $\cos \theta_{\mu - \mu}^{\text{FSR}}$, $\pi - (\phi_{\mu^+} - \phi_{\mu^-})$
 - cut **limits depends on scalar mass**
- Additional cut on M_{recoil} **depending on** M_{scalar}

After mva4f	6226	1109	8023	13321	5267
After recoil mass	4630	1	4306	9108	1546

Cuts:

mva2f response > 0

mva4f response > 0.1

Recoil mass [90-3,90+10]

Limits:

LR 0.053

RL 0.059

Combined 0.040

Illustration cuts on variable distributions

Cuts:
mva2f response > 0
mva4f response > 0.1

Scalar mass 90 GeV

Conclusions and outlook

- The model independent search for new scalars is **reimplemented** based on **newest MC production** and **ILD software**
- **Cut flow is modified** with respect to the previous analysis
- **First results** show an **improvement** with respect to previous limits
- **Review** and **possible optimisation** of the cuts is foreseen
- **Extension** of the searches to other **Z mode decays** is foreseen

Calculation of the limits is going on
