

# **ATRAPP Meeting**

## **Planning progression**

Jeremy Couthures

# Official ITk plots

## 1) Move the Hashing code to core:

- 1) Move the code to core (local) ✓
- 2) Make the code compile ✓
- 3) Ensure same results than before ✓
- 4) Pull requests: [Hashing](#), [Container Policy](#), [Event Timing](#), [Root seed writer](#) ✓, [Root comparison](#)

## 2) Link ACTS+Hashing version in Athena (TWiki) ✓

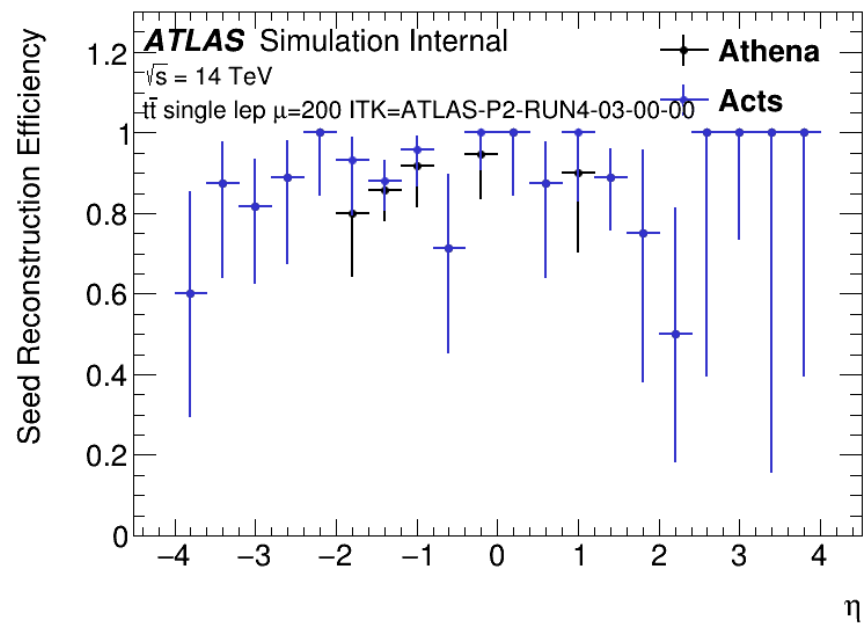

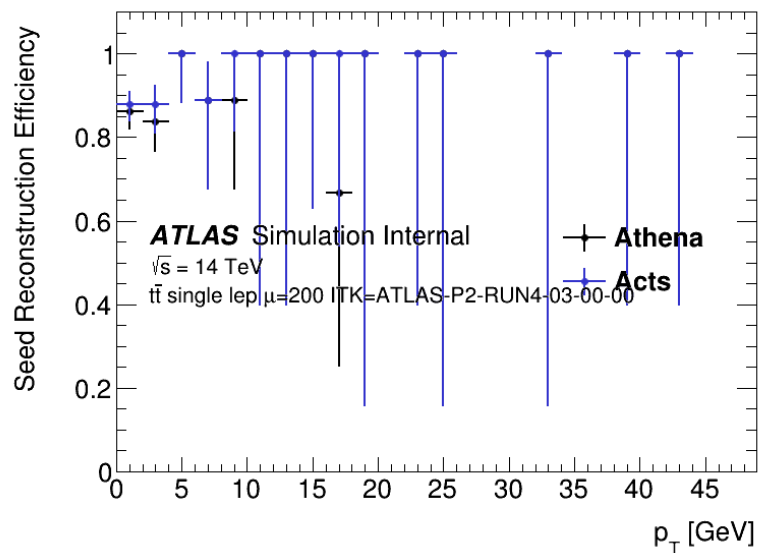

## 3) Reproduce official plots (with Florencia):

- 1) Athena + Default (running: condor job submitted)
- 2) Athena + ACTS (running: condor job submitted)
- 3) Athena + ACTS SSS only
- 4) Athena + ACTS PPP only

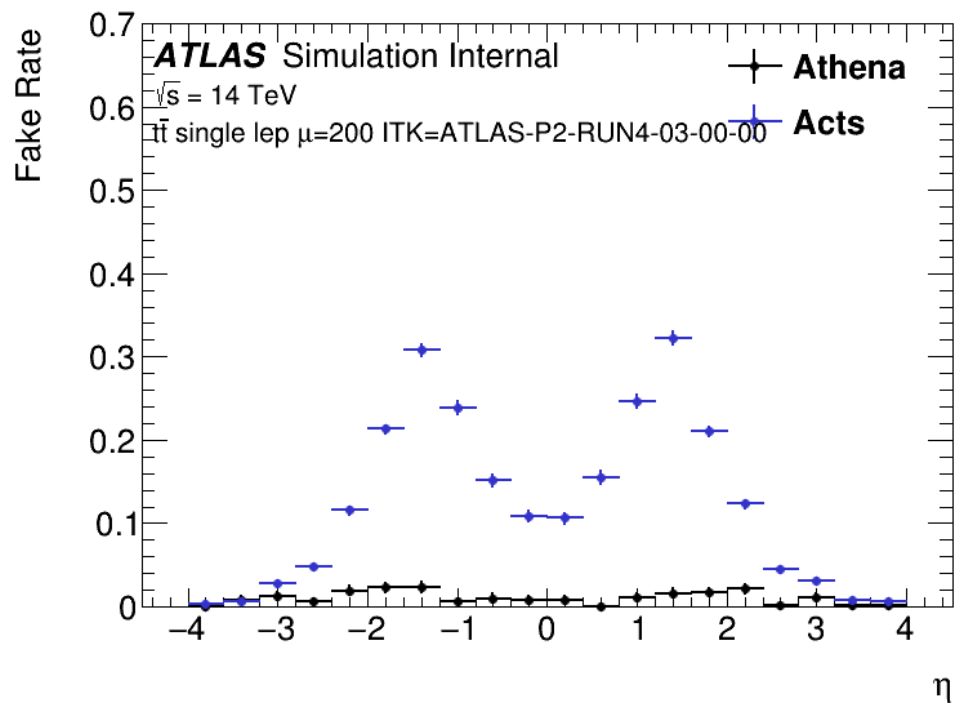

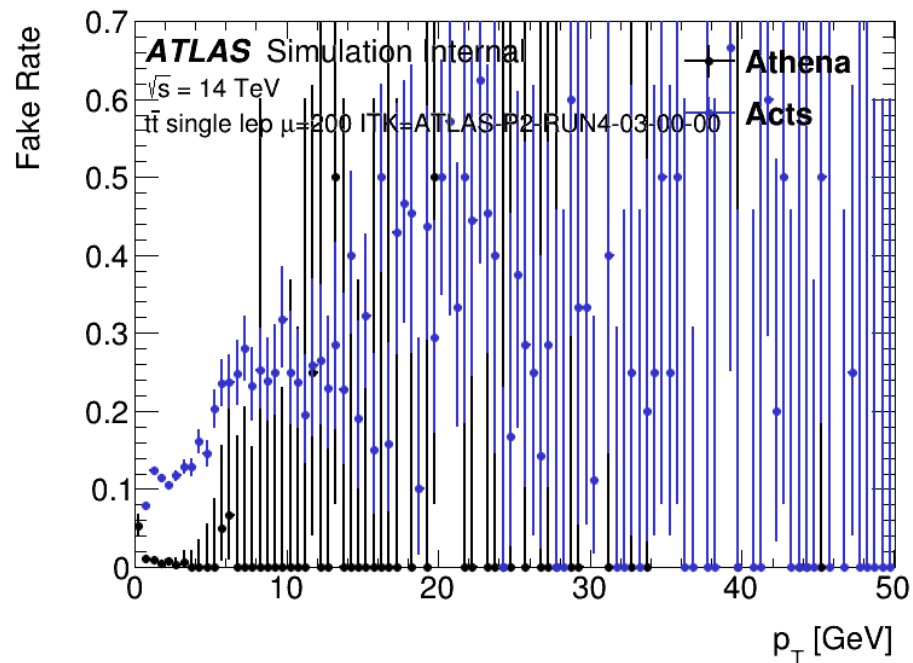

## 4) Edit seeding tool (in Athena) with Hashing

## 5) Reproduce the plots with Hashing (Eff + CPU)

# Next

- 1) Get the data from GNN people (SP and truth) (Alexis) (**Dumped files**) (**Dumping code**)
- 2) Train NN (using **acorn**? It can already read the dumped files)
