IntheArt

vendredi 22 novembre 2024 11:35 (25 minutes)

Currently, artificial intelligence (AI) is a rapidly growing field. These methods can assist in solving very challenging problems, thus providing significant time savings in finding solutions. The methods are diverse and evolve quickly, making it very beneficial to come together, share knowledge, train, and capitalize on our expertise. This is the purpose of the IntheArt group focused on AI methods. It consists of over a hundred researchers, ranging from experts to beginner users, who meet regularly to:
• Exchange ideas about AI: case studies and associated issues
• Train and learn from each other, for example, through specific training sessions
• Work on research topics
• Organize and participate in workshops
• Learn together about situations where machine learning can be useful, as well as where it has limitations, particularly regarding trust, interpretability, and explainability of responses or decisions.
This group and the associated research are what I will present to you.

Auteur principal: GAUTARD, Valérie (CEA-Irfu)

Orateur: GAUTARD, Valérie (CEA-Irfu)

Classification de Session: Friday morning

Classification de thématique: Training, courses, tutorials, open datasets and challenges
