

ATRAPP Meeting

Planning progression

Jeremy Couthures

Official ITk plots

1) Move the Hashing code to core:

- 1) Move the code to core (local) ✓
- 2) Make the code compile ✓
- 3) Ensure same results than before ✓
- 4) Pull requests: Hashing **WIP**, Container Policy, Event Timing (–), Root seed writer ✓, Root comparison ✓

2) Link ACTS+Hashing version in Athena (TWiki) ✓

3) Reproduce **official plots** (slide 17) (with Florencia):

- 1) Athena + Default: $\mu = 0$ ✓; $\mu = 200$ (running)
- 2) Athena + ACTS $\mu = 0$ ✓; $\mu = 200$ (running)

4) Edit seeding tool (in Athena) with Hashing (NEXT)

5) Reproduce the plots with Hashing (Eff + CPU)

Efficiency $\mu=0$

1000 events

Fake Rate $\mu=0$

1000 events

Next

- 1) Get the data from GNN people (SP and truth) (Alexis) (**Dumped files**) (**Dumping code**)
- 2) Train NN (using **acorn**? It can already read the dumped files)
