Studies of hadron spectroscopy at Belle and Belle II

Wednesday 9 July 2025 16:40 (20 minutes)

The Belle and Belle II experiments have collected a 1.6 ab^{-1} sample of e^+e^- collision data at centre-of-mass energies near the $\Upsilon(nS)$ resonances. We present a measurement of the B^0 and B^+ meson mass difference and a measurement of $\sigma(e^+e^- \rightarrow J/\psi p \bar{p})$ over a range of centre-of-mass energies accessed via initial-state radiation.
