PyAML-Net EU COST Action

mercredi 6 novembre 2024 10:00 (20 minutes)

The Python Accelerator Middle Layer Network (PyAML-Net) Action has been submitted recently. We are presently waiting for evaluation. If approved we would receive networking money for workshop, trainings, short term scientific missions and schools. Also, if the Action is approved any one will be able to join the network via a simple action on the cost.eu webpage.

The project aims at the developments of a joint technology platform for accelerator tuning, commissioning simulations and digital twin/shadows in python. The platform will be agnostic of the specific accelerator and control system, thus usable (after adequate configuration) by any laboratory.

Orateur: Dr MARIA-LIUZZIO, Simone (ESRF)

Classification de Session: SR Light sources
