

# Relationships with other organizations

## Landscape

- Other communities outside core IVOA community
  - IHDEA (heliophysics): willing to reuse IVOA pieces (Registry, Semantics, TAP...)
  - IPDA (planetary): IVOA interface through EPNTAP?
- Large projects that are drivers in development of new technologies (SKA, LSST, Euclid...)
  - SRCNet for SKA => SKAO joined IVOA. Policy level ok. But they need to go forward fast.
- other ESFRIs ? => ESCAPE should do the job
  - ESCAPE open collaboration should become reality, and be visible.
  - Europlanet Association is now a EOSC Association Member
  - EOSC node for astrophysics in Europe ?
  - Online platform (ESADDataLabs, HelioData, EOSC EU Node, Amazon (NASA data)...)...
- Need for a new landscape analysis ? (updated from Astronet?)

# Relationships with other organizations

## EOSC and us

- What is EOSC? review documents. List of documents will be shared.
  - EOSC = federation of Nodes = the european “data space” for science
  - “dataset driven” (citation, preservation, impact, access, referencing)
  - EOSC also provide resources (compute, storage, etc)
- IVOA registry is “connected” through EUDAT/B2Find, but misses critical level of accessibility for most resources (except VizieR).
- Thematic Node for astronomy => need a roadmap (shared with Europlanet?)
  - Make use of EOSC to enhance astronomy data rather than force IVOA into EOSC.
- Roadmap contacts: Marco M, Mark A, Baptiste C, ESO, Open Univ.
