RSOTC: the Regional State of the Climate

Presenter: Antonio Pérez Velasco, Predictia Intelligent Data Solutions SL,  0000-0002-0250-1461

Implemented by

predictia

IFCA

Instituto de Física de Cantabria

Funded by
the European Union

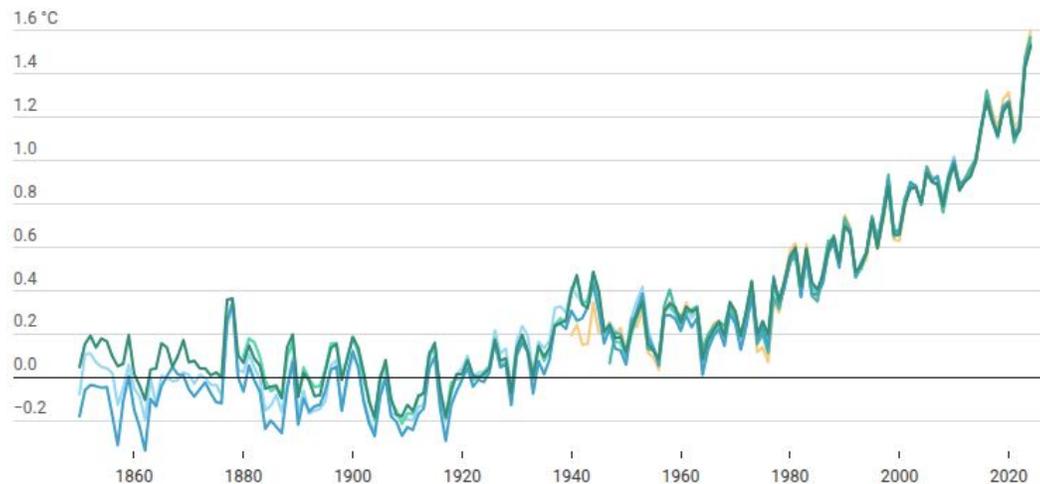

While great, currently available “State of the climate” (SotC) reports **have limitations**.

State of the Global Climate - WMO

Global mean temperature 1850-2024

Difference from 1850-1900 average

— Berkeley Earth (1850-2024.12) — ERA5 (1940-2024.12) — GISTEMP (1880-2024.12) — HadCRUT5 (1850-2024.12) — JRA-3Q (1947-2024.12) — NOAAGlobalTemp v6 (1850-2024.12)

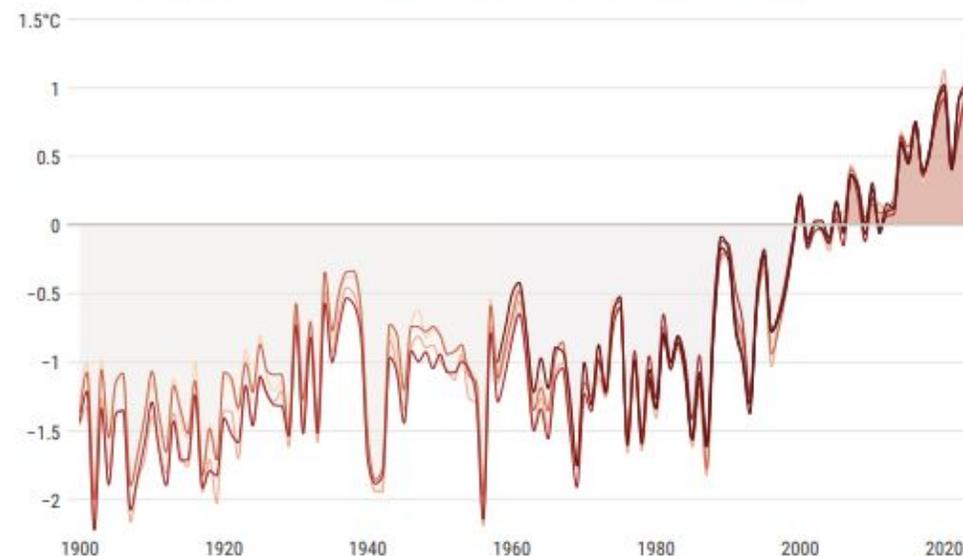

Annual global mean temperature anomalies relative to a pre-industrial (1850–1900) baseline shown from 1850 to 2024

European State of the Climate - Copernicus C3S

Anomalies in annual surface air temperature for WMO RA VI Europe

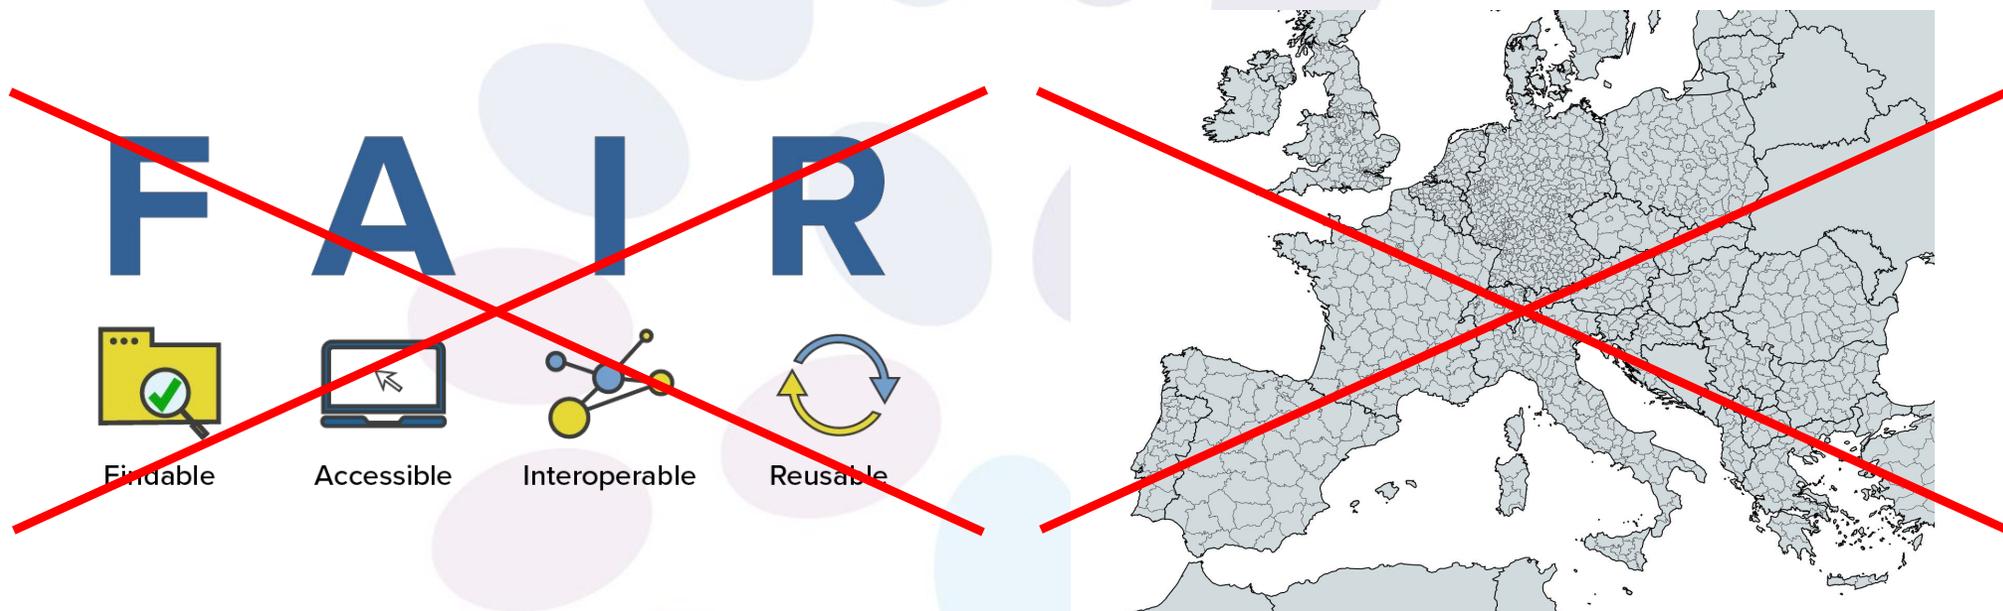

Compared to 1991–2020 average

— Berkeley Earth — GISTEMP — HadCRUT5 — NOAAGlobalTemp v6 — JRA-3Q — ERA5

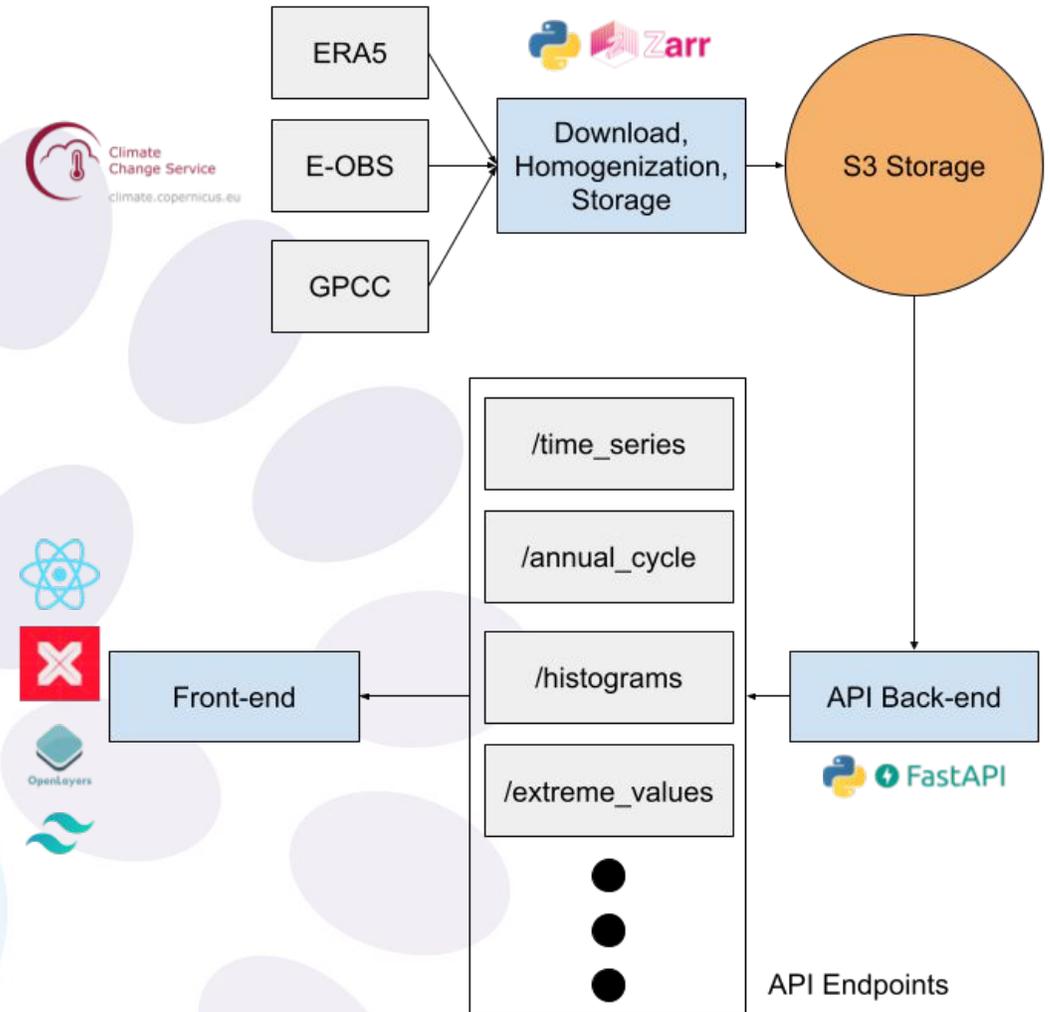

While great, currently available “State of the climate” (SotC) reports **have limitations**.

They don’t usually follow the **FAIR principles** and are not available for **small socio-economic regions**.

We have developed a **FAIR by design dashboard** that will enable the users to easily visualise a **state of the climate for their regions of interest**. The available regions are the Nomenclature of Territorial Units for Statistics (**NUTS**) European regions.

An user-centric web dashboard to visualize up-to-date regional climate data

OSCARS - Regional State of the Climate: Data and Indices

Predictia Intelligent Data Solutions SL (predictia@predictia.es)  Instituto de Física de Cantabria (IFCA) (ifca@ifca.unican.es) 

This dataset provides harmonised regional climate data and climate-extreme indices developed within the framework of the **Regional State of the Climate (RSOTC)** project. This work was supported by the European Union's *Horizon Europe* research and innovation programme through the **OSCARS (Open Science Cluster of EOOS Regional State of the Climate)** project, Grant Agreement No. **101058571**.

The dataset uses the **ERA5 reanalysis** as its foundational data source. ERA5 is the fifth-generation atmospheric reanalysis produced by the **European Centre for Medium-Range Weather Forecasts (ECMWF)** and distributed via the **Copernicus Climate Change Service (C3S)** (DOI: <https://doi.org/10.24381/cds.4991cf48>).

ERA5 provides hourly estimates of a wide range of atmospheric, land-surface, and sea-state variables at a spatial resolution of **0.25° x 0.25°** (approximately 31 km), covering the period from **1940 to the present**. These data form the basis for deriving the consistent and high-resolution regional climate information presented here.

The dataset provides regional information spatially aggregated as time series over European regions defined by the **Nomenclature of Territorial Units for Statistics (NUTS)** classification:

- **NUTS 0:** Country level
- **NUTS 1:** Major socio-economic regions
- **NUTS 2:** Basic regions for regional policies
- **NUTS 3:** Small regions for specific diagnoses

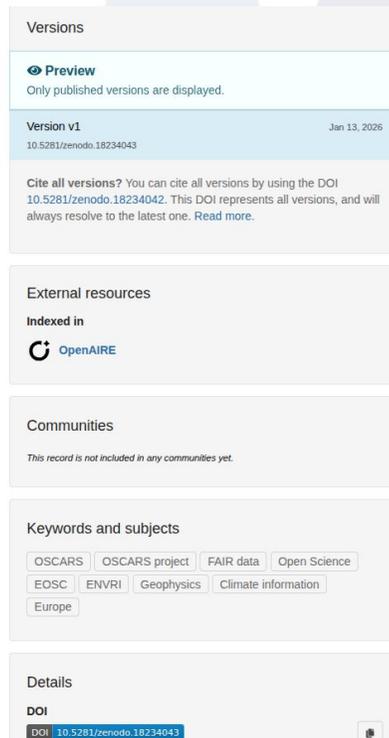

(Reference: Eurostat - NUTS classification)

The dataset is designed to support **climate monitoring, impact assessment, policy analysis, and downstream climate services** across multiple administrative scales. It is updated on a **monthly basis**.

Core variables

The core variables are derived from the state-of-the-art ERA5 reanalysis and represent fundamental quantities for climate and meteorological applications:

- **Near-surface air temperature** (`tas`, `tasmin`, `tasmax`)
Daily mean (`tas`), maximum (`tasmax`), and minimum (`tasmin`) air temperature at 2 m.
- **Total precipitation** (`pr`)
Daily accumulated liquid and frozen precipitation, relevant for hydrology, drought, and flood analysis.
- **10-m wind speed** (`sfcwind`)
Magnitude of the horizontal wind vector at 10 m, relevant for wind energy and atmospheric transport studies.

How will make your results sustainable over time?

	Implementation
Open Infrastructure	Hosted on GitHub (code) and Zenodo (data/DOIs).
Data Continuity	Built on Copernicus ERA5 for reliable, updated sources.
Interoperable	Fully compatible with EOSC standards and onboarding.
Reliability	RO-Crate format for automatic, auditable provenance.

How will the scientific community further exploit them?

Pathway	How the Community Benefits
Standardizing	Ready-to-use tools for regional climate monitoring reports.
Integration	RESTful API allows direct data pull into 3rd party apps.
Reproducible	Open-source pipelines allow researchers to replicate results.
Scalability	Designed for easy expansion to new regions or variables.

Who has been doing it?

- Daniel San-Martín (Predictia) - Project Coordination - daniel@predictia.es
 - Markel García-Díez (Predictia) - Scientific coordination - garciam@predictia.es
 - Javier Triana (Predictia) - Dissemination coordination
 - Antonio Pérez (Predictia) - Backend development
 - Juan José Velasco (Predictia) - Backend development
 - Ivan Sánchez (Predictia) - Frontend development
 - Álvaro López García (IFCA) - ENVRI and EOSC integration
 - Pablo Orviz (IFCA) - Provenance definition
