

## tau + lepton selection status

F. Badaud, P. Gris, J. Jammes  
LPC Clermont-Fd

Mai, 4 2010

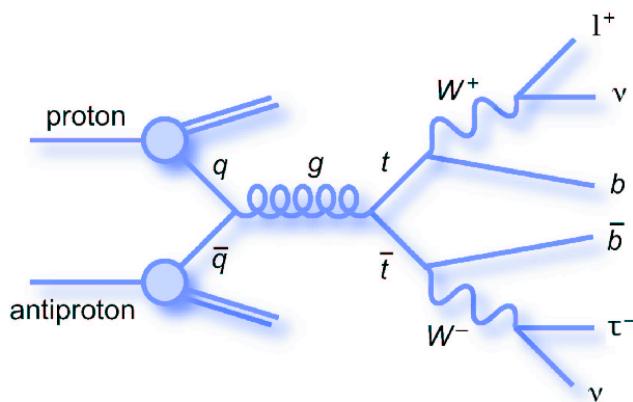

---

- General framework
- electron + jet + tau channel
- muon + jet + tau channel
- Plans

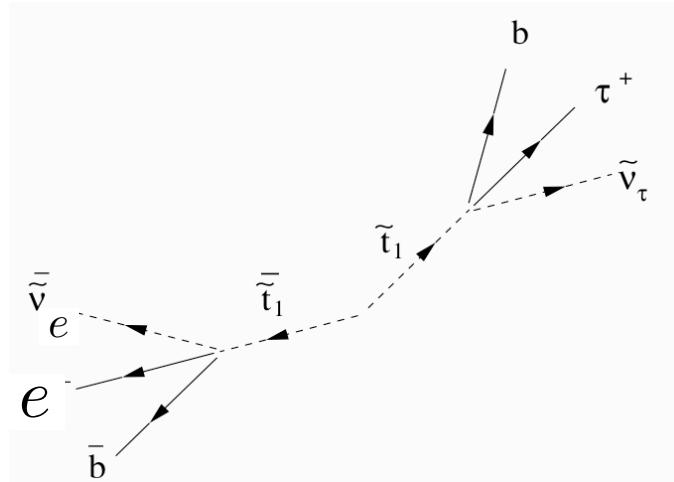

# General remark

---

ttbar : Jerome, Frederique

stop search : Philippe

same final state :  
lepton (electron or muon)  
+ tau  
+ jets  
+ MET

Philippe has produced the Trees: DATA + Monte Carlo  
DATASet : summer09extended.

# Old General Framework

## electron+jets preselection

---

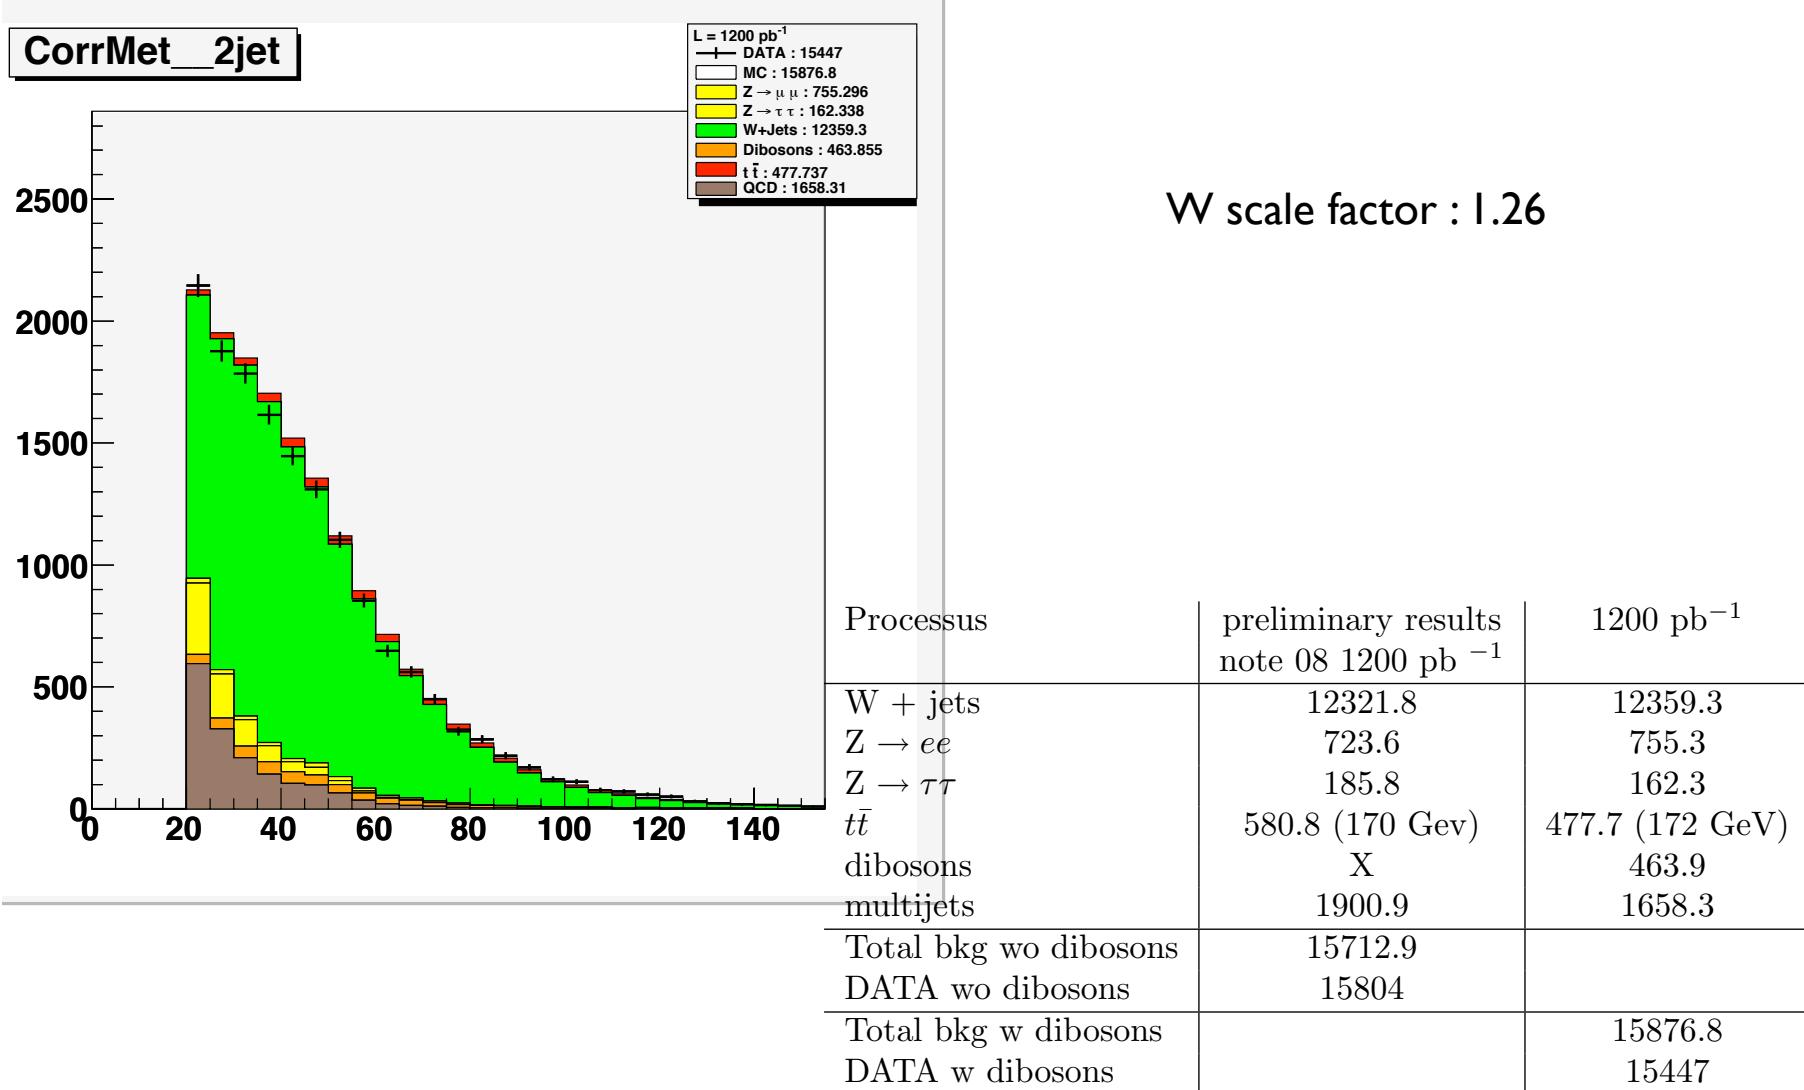

- triggers (SuperOR)
- at least 1 isolated electron
- 2 jets (GoodJCCB) of  $p_T > 20 \text{ GeV}/c$ ,  $30 \text{ GeV}/c$  for the leading jet
- vertex requirements  $z_{\text{PV}} < 60\text{cm}$ ,  $\text{Ntrks}_{\text{PV}} \geq 3$ ,  $\text{dz}(\text{lepton}, \text{PV}) < 1 \text{ cm}$
- $W$   $p_T$  reweighting,  $ZpT$  reweighting
- One 15GeV tight electron :
  - Loose electrons 'Toploose'
    1. particle  $|ID| = 10$  or  $11$
    2. high energy fraction in the EM part of the calorimeter  $f_{EM} > 0.9$
    3. isolated EM cluster  $f_{iso} < 0.15$
    4. shower shape cut  $\chi^2_{Hmx7} < 50$
    5. one track matched with  $E/p$  requiring  $p_{\chi^2_{trk}} > 0$  and track  $p_T > 5 \text{ GeV}$
    6. Central calorimeter ( $|\eta| < 1.1$ )
  - Tight electrons 'Toptight'
    1. Passes loose electron criteria
    2. Likelihood  $> 0.85$

DATASET, first RunIIb 1.2 fb-1

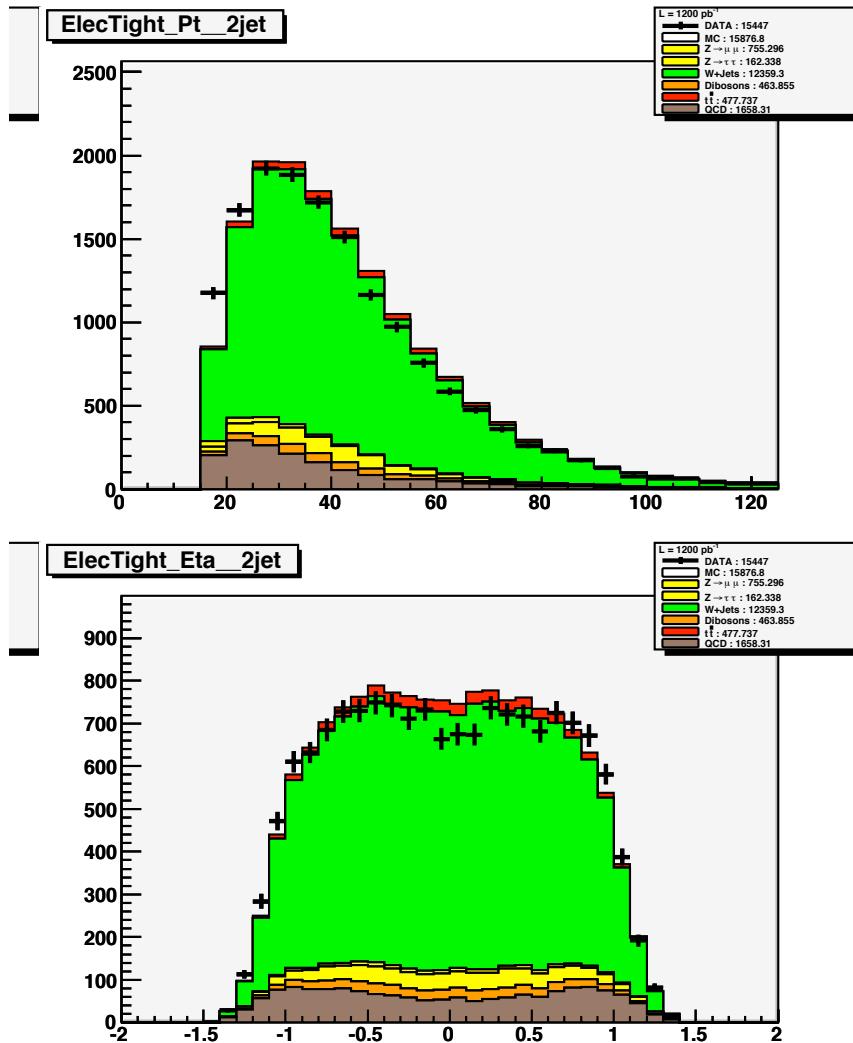

- veto muon
- $\Delta\varphi(e, \text{MET}) > 2.2 - 0.045 * \text{MET}$
- $\text{MET} > 20 \text{ GeV}$

## old note 2008

## electron + jets + tau events selection

---

- $E_T > 10/10/10$  GeV for type 1/2/3 (note 08: 10/5/10)
- trk  $p_T > 7/5/5$  and for type 3  $\sum p_T > 7$  GeV/c
- $|\eta| < 1.0$
- tau is separated from the lepton by requiring the lepton's track and tau's leading track to be separated by  $\Delta R(\tau, \text{lepton}) > 0.5$ , and not sharing the same track
- the tau's charge is opposite that of the lepton's charge.
- $p_{T,NN} > 0.8$  for all types.

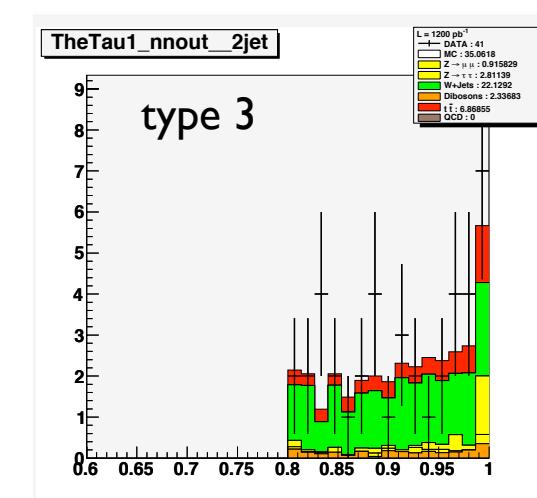

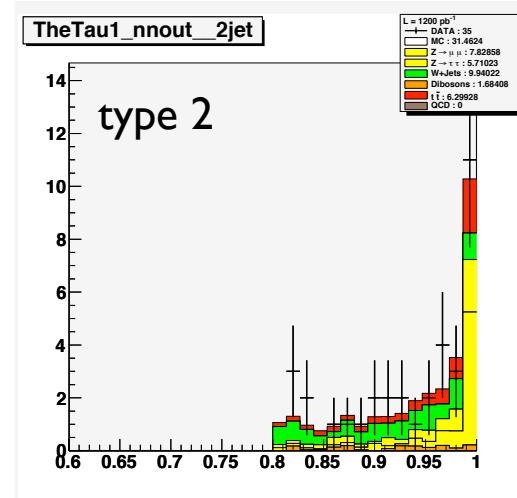

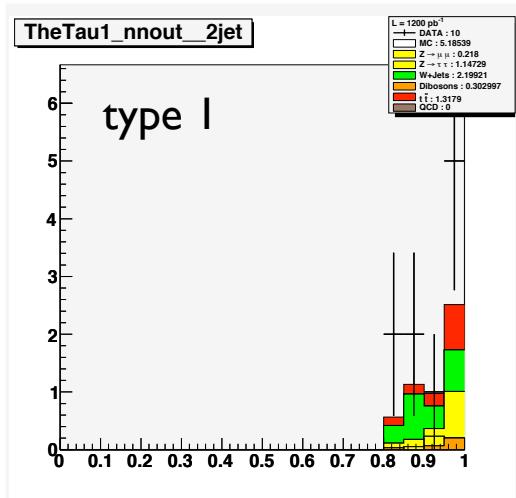

then

- the jet multiplicity is recounted. A jet is considered to be the same object as the tau candidate if it is separated from the tau candidate by a distance less than 0.5
  - the  $E_T^\tau$  is recomputed with propagation of the tau energy scale of the selected tau  $E_T^\tau > 15$  GeV (muon) or 20 GeV (electron)
- 
- the multijet BKG is re-estimated (not yet done for the electron channel)

$$N_{QCD}^{OS} = N_{QCD}^{SS} = N_{DATA}^{SS} - N_{W+jets}^{SS} - N_{t\bar{t}}^{SS} - N_{Z/\gamma^*+jets}^{SS} - N_{diboson}^{SS} - N_{singletop}^{SS}$$

## Plans

---

- CHECKS CHECKS CHECKS
  - then apply b-tagged
  - cross section extraction

we are still working with an old release

impossible to be ready for end of may

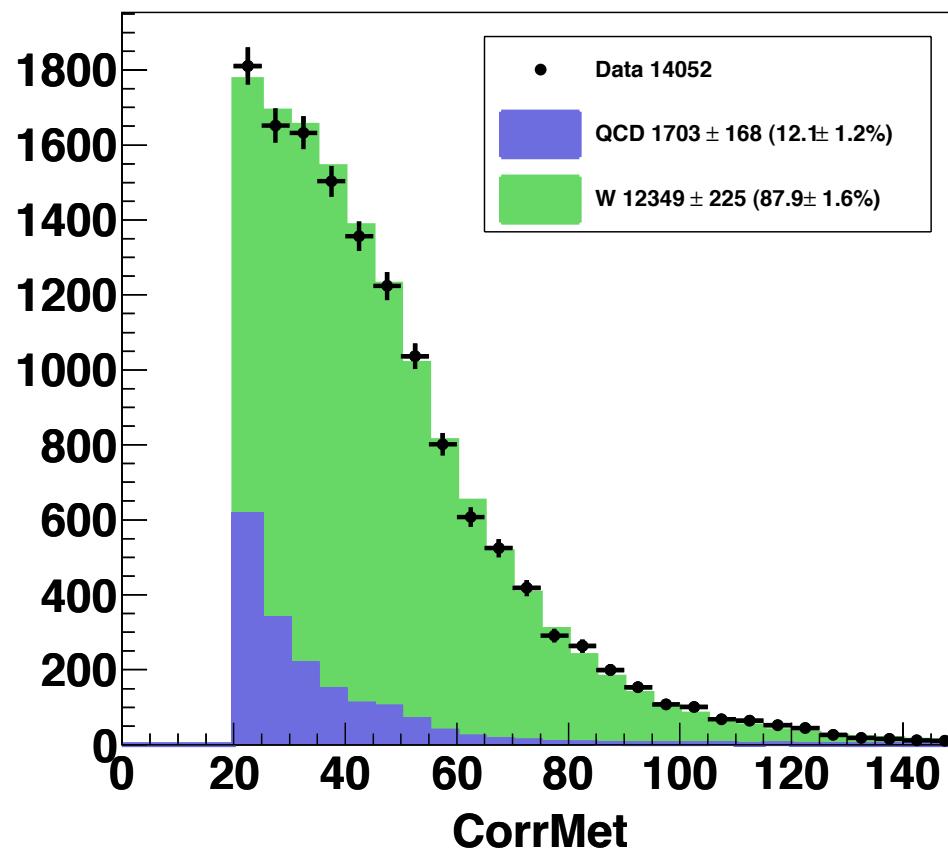

## **BACK-UP SLIDES**

## mujet BKG estimation and normalisation of W+jets

- lepton + jets preselection : estimation of mujet BKG and Normalisation of W+jets BKG:
  - a fit of the distributions of the W+jets and mujets BKG to the data at the preselection level is performed.
  - DATA : the known BKG (ttbar and Z+jets) are subtracted from the DATA sample
  - W+jets template : given by the MC distribution
  - Mujet template : derived by using DATA events with non-isolated leptons : electron loosely isolated but which fails the tight isolation. The contribution of W+jets events passing these conditions are subtracted to the mujet template .
  - an iterative fit is performed: the results of the W normalisation is propagated to the MC until a stable factor is obtained.
  - distribution : transverse mass of the lepton + MET or MET

# multijet BKG estimation and normalisation of W+jets

## CorrMet (2 jet inclusive multi.)

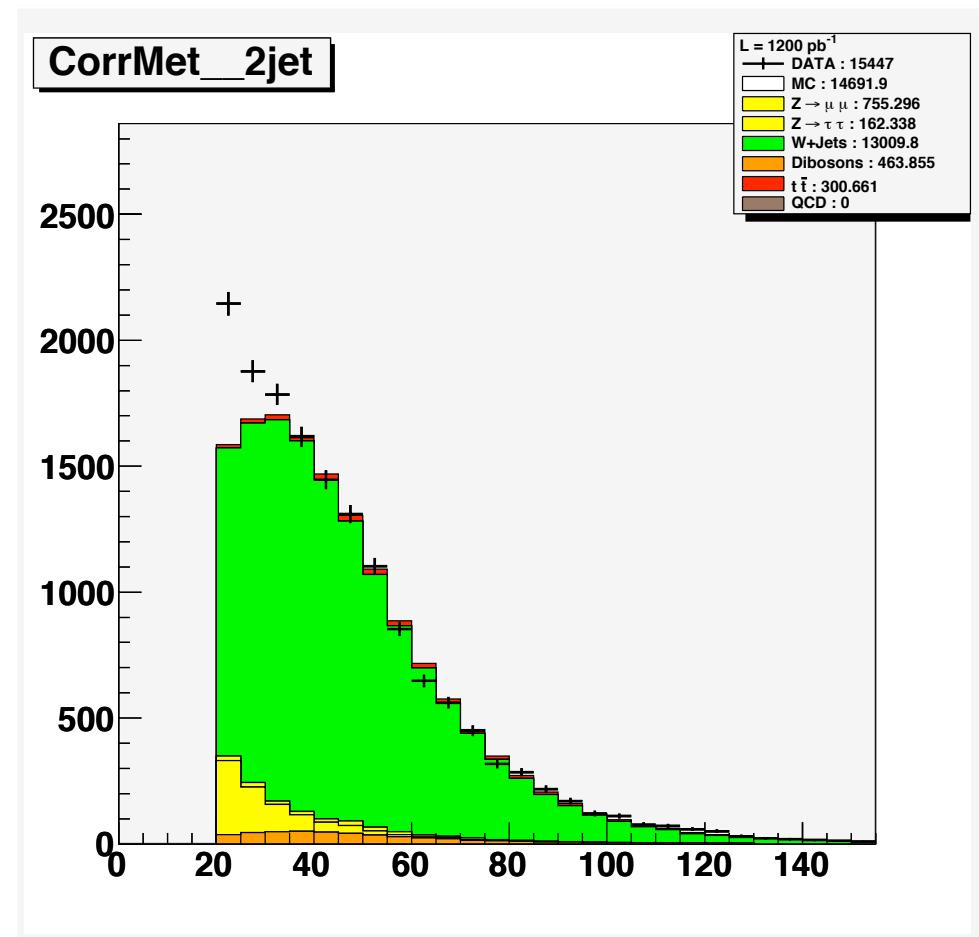

result of the fit:

W scale factor : 1.254  
QCD scale factor : 0.14

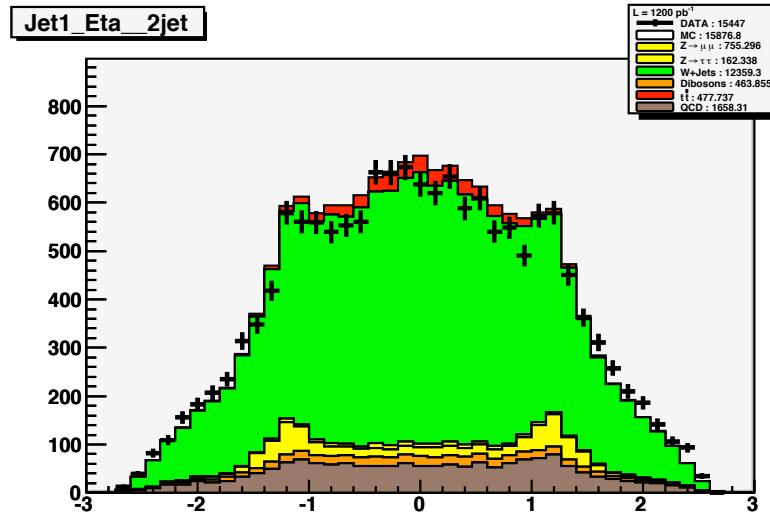

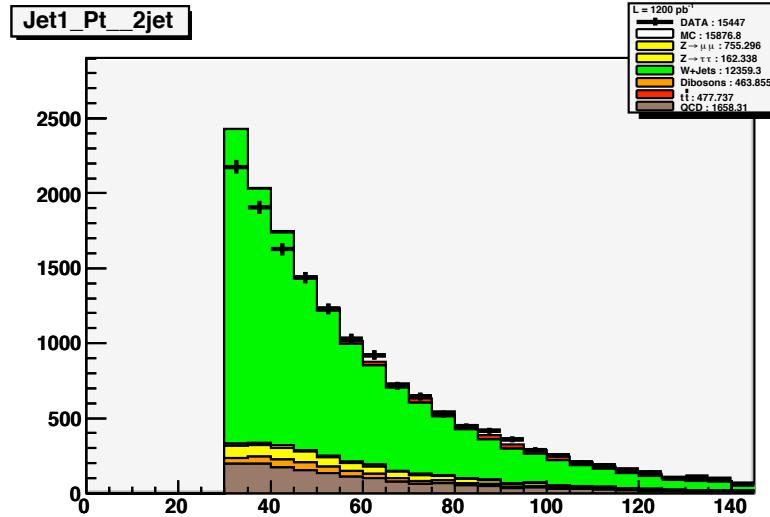

# electron+jets preselection

Result of the preselection without QCD estimation

W scale factor : 1.32

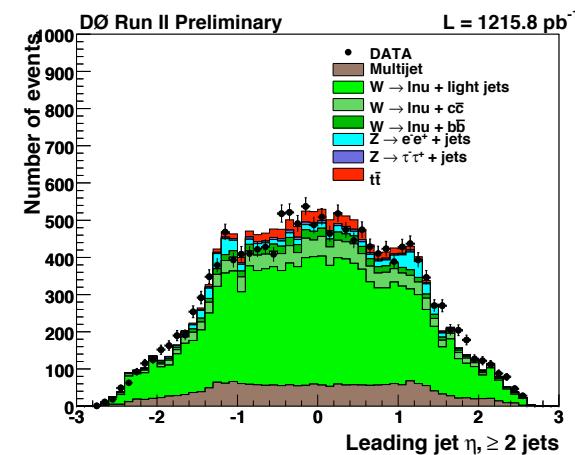

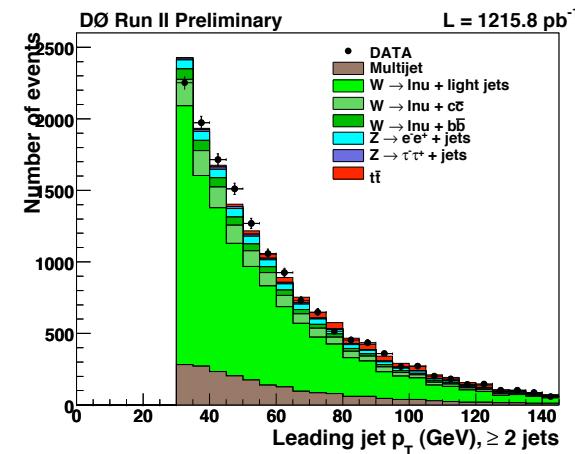

# electron+jets preselection with QCD estimation

F. Badaud, 29 april 10

old note 2008

## electron + jets + tau events selection

---

- $E_T > 10/10/10$  GeV for type 1/2/3 (note 08: 10/5/10)
- trk  $p_T > 7/5/5$  and for type 3  $\sum p_T > 7$  GeV/c
- $|\eta| < 1.0$
- tau is separated from the lepton by requiring the lepton's track and tau's leading track to be separated by  $\Delta R(\tau, \text{lepton}) > 0.5$ , and not sharing the same track
- the tau's charge is opposite that of the lepton's charge.
- $p_{T,NN} > 0.8$  for all types.

then

- the jet multiplicity is recounted. A jet is considered to be the same object as the tau candidate if it is separated from the tau candidate by a distance less than 0.5
- the  $E_T^{\tau}$  is recomputed with propagation of the tau energy scale of the selected tau  $E_T^{\tau} > 15$  GeV (muon) or 20 GeV (electron)
- **the multijet BKG is re-estimated**  
the lepton+jets+tau sample is divided into 2 disjoint samples. The first sample contains lepton-tau pairs with opposite charge sign (OS). The second sample contains the lepton-tau pairs which have same-sign charge (SS). the SS sample is used to estimate the contribution of multijet processes in the OS sample.

$$N_{QCD}^{OS} = N_{QCD}^{SS} = N_{DATA}^{SS} - N_{W+\text{jets}}^{SS} - N_{t\bar{t}}^{SS} - N_{Z/\gamma^*+\text{jets}}^{SS} - N_{diboson}^{SS} - N_{singletop}^{SS}$$
