Parameter sweep in fMRI

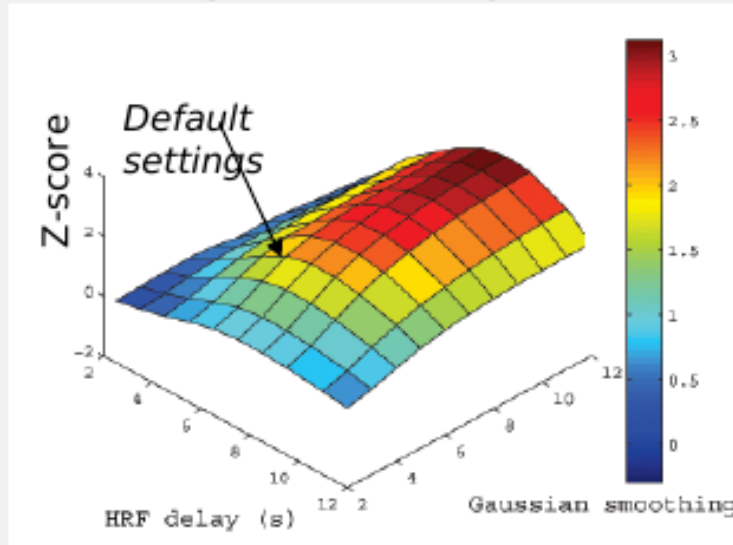

- Activation maps

- Echo times comparison

- Smoothing and HRF optimization

- Registration evaluation

- 10,000 jobs - 1 CPU year - 1 week elapsed time - 1.5 TB out

Grid execution

- **Infrastructure**

- 4 sites (687 CPUs, 500TB) of the Dutch grid (part of EGEE, vlemmed VO)

Cardiac MRI segmentation

- **Cardiac segmentation with deformable models**

- Volumetric template mesh
- Initialized with rigid registration
- Image gradient ► force field ► deformation

- **Adjust segmentation parameters**

init 0

init 1

init 2

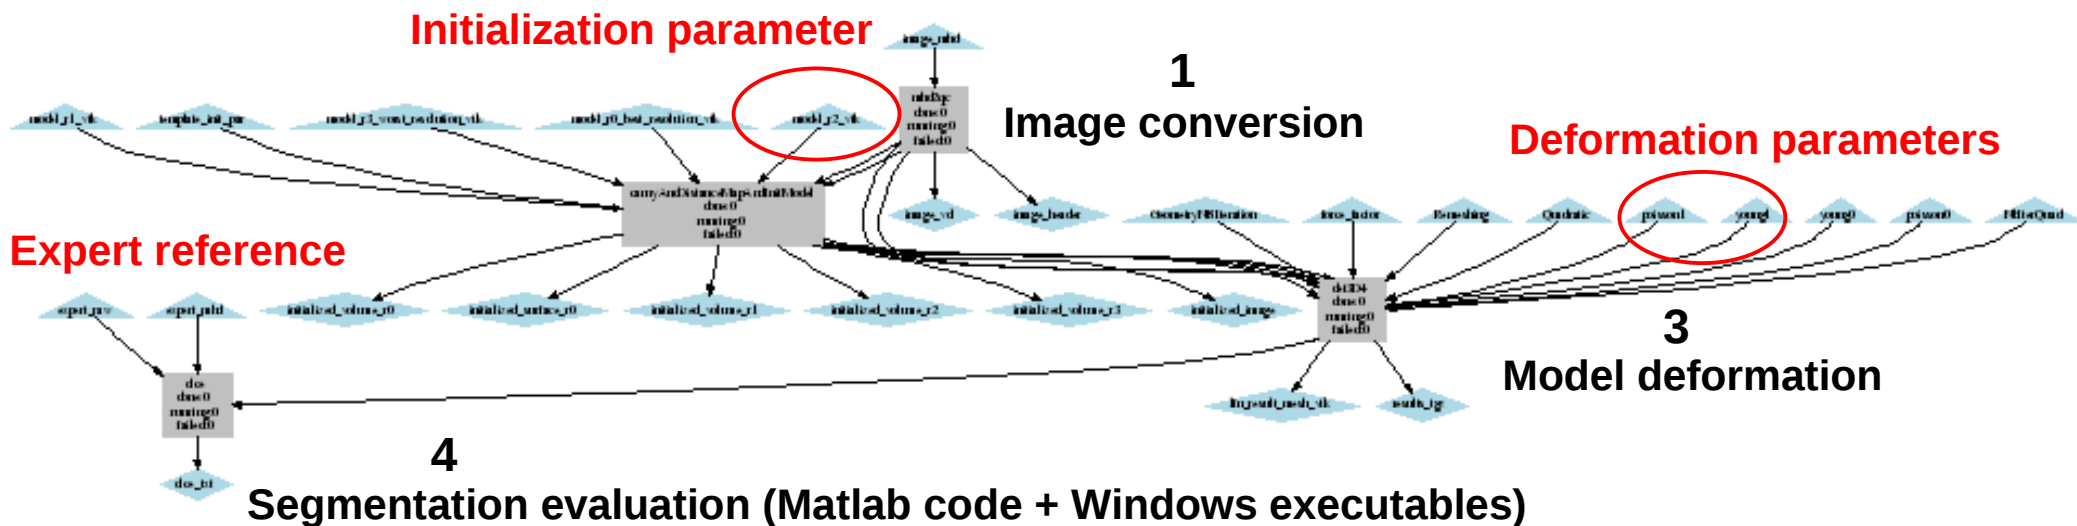

- force factor = 0.1
- force factor = 0.2
- force factor = 0.3
- force factor = 0.4
- force factor = 0.5

- **Estimate myocardium physical parameters**

- Best segmentation ◀ most realistic parameters (e.g. Young modulus)

Cardiac segmentation workflow

- **Main steps:**
 - Image conversion
 - Initialization
 - Deformation
 - Evaluation w.r.t expert reference

- **Workflow iterated on parameter/image sets**

FIELD US simulation

<http://server.oersted.dtu.dk/personal/jaj/field/>

- **Principle**

- Parallelism on lines
- Parallelism on mediums

- **Example on 2D beating heart**

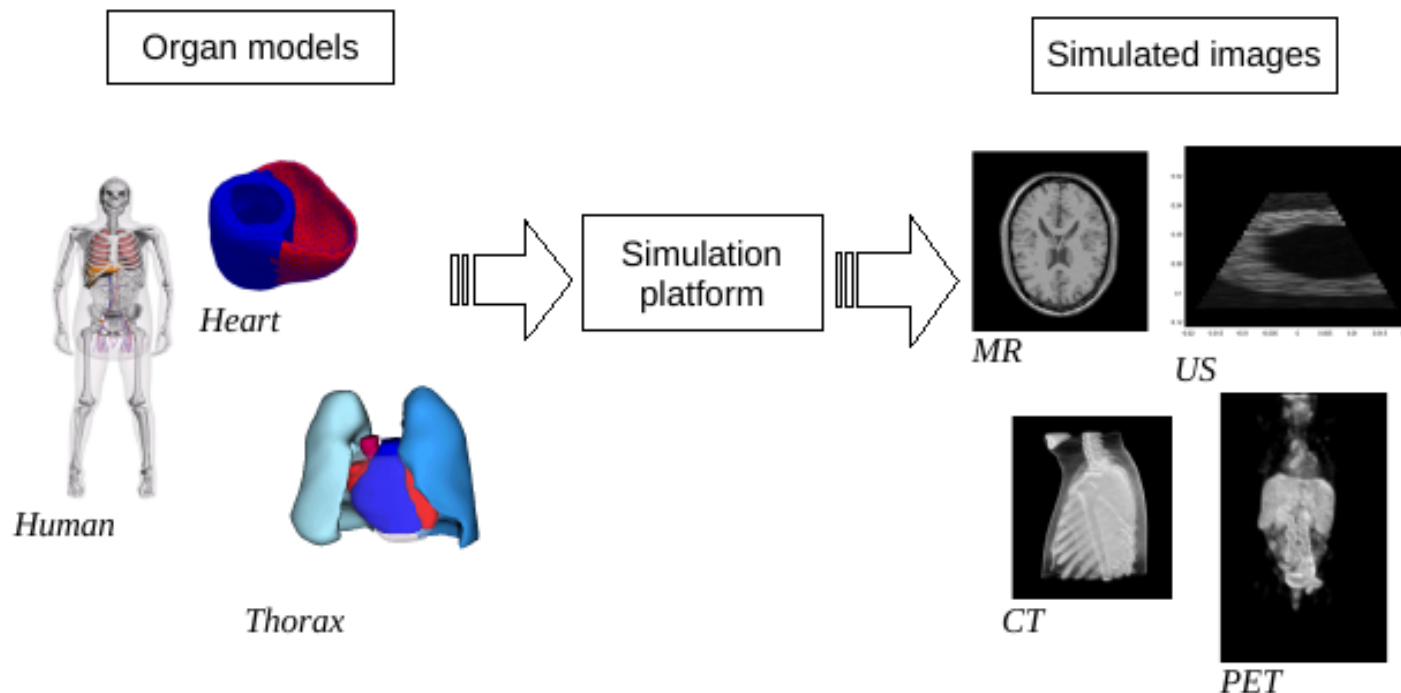

- 1920 lines (30 mediums x 64 lines)
- $> 16h \Rightarrow < 3h$
- 12% error (first try) \Rightarrow 2% (fine-tuning)

Virtual Imaging Platform

<http://www.creatis.insa-lyon.fr/vip>

- **Simulation of medical images from organ models**
 - Includes semantic information
 - Linked to computing platforms

Hadrontherapy simulation with GATE

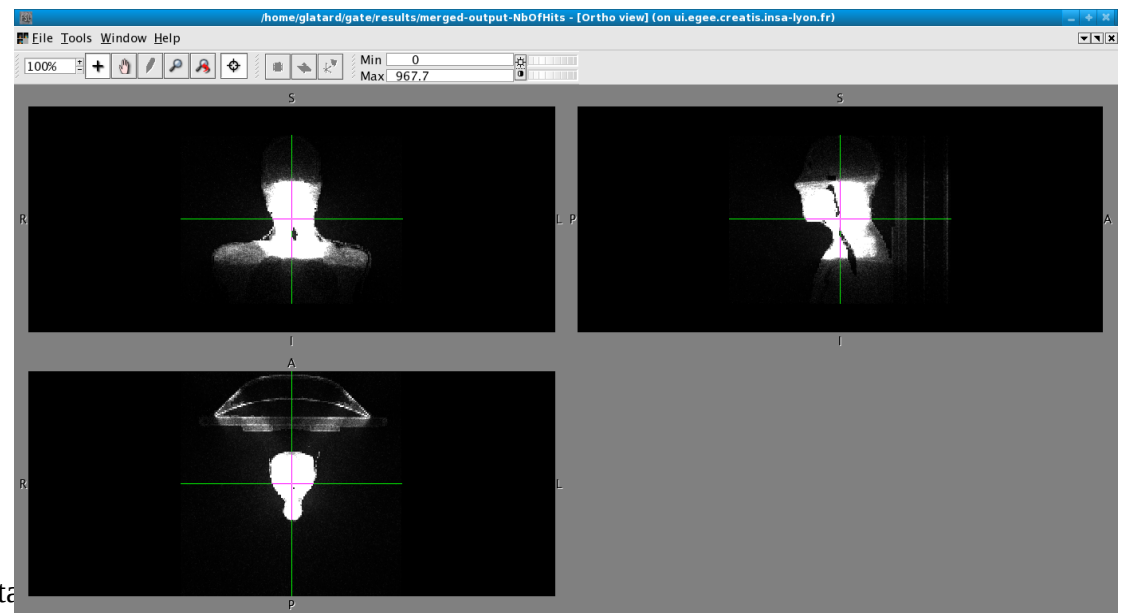

<http://opengatecollaboration.healthgrid.org/>

- **Simulation principle**

- Patient scan + source model
- Particle (photon, hadron) tracking through matter
- Hit / dose maps

- **Involved effort**

- High number of particles (~ 20,000,000)
- Monte-Carlo simulation ► divisible load

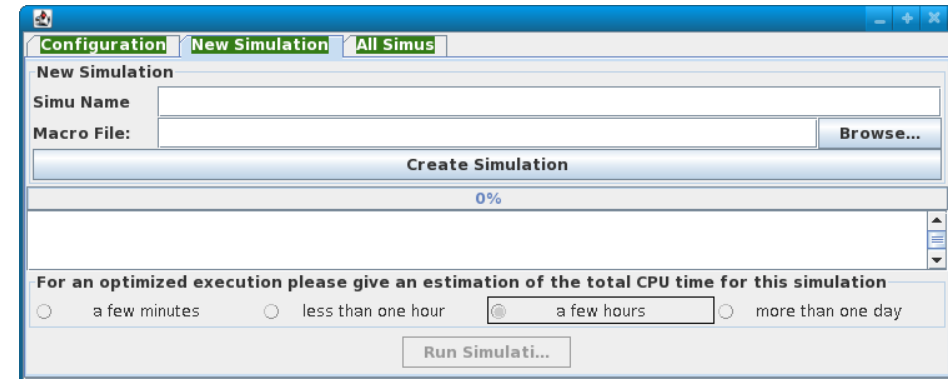

GATE-Lab interface

- **Dedicated VBrowser plugin**

- Simulation file parsing
- Parameter checking
- Input files bundling and upload
- Time estimation
- History management (+cleanup)

- **Customized server interface**

- #simulated particles
- Current status
- Link to results directory
- Confirm/retry

Info for simulation "09_12_09_09_46_Test11_57" (inactive)

Workflow inputs

Run Workflow Web service URL: https://ws1.grid.sara.nl/~glatard/workflow/workflow-PTlv75/workfl

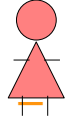

- **Applications described as workflows**
 - Parallel language
 - Middleware-independent
 - Provides structure to data (provenance logs)
- **Codes installed on the fly on the grid nodes**
 - Dependencies (e.g. libs) bundled in tgz
 - Only assumes that grid clients are installed
- **Case of matlab applications**
 - Compiled with toolboxes on a representative machine (license)
 - Deployed with Matlab Compiler Runtime (no license)

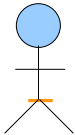

Data management issues

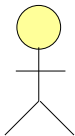

- **experiment level**

 “Jobs are failing due to file transfer issues”
=> Data placement and replication of volatile data ?
VO/user support

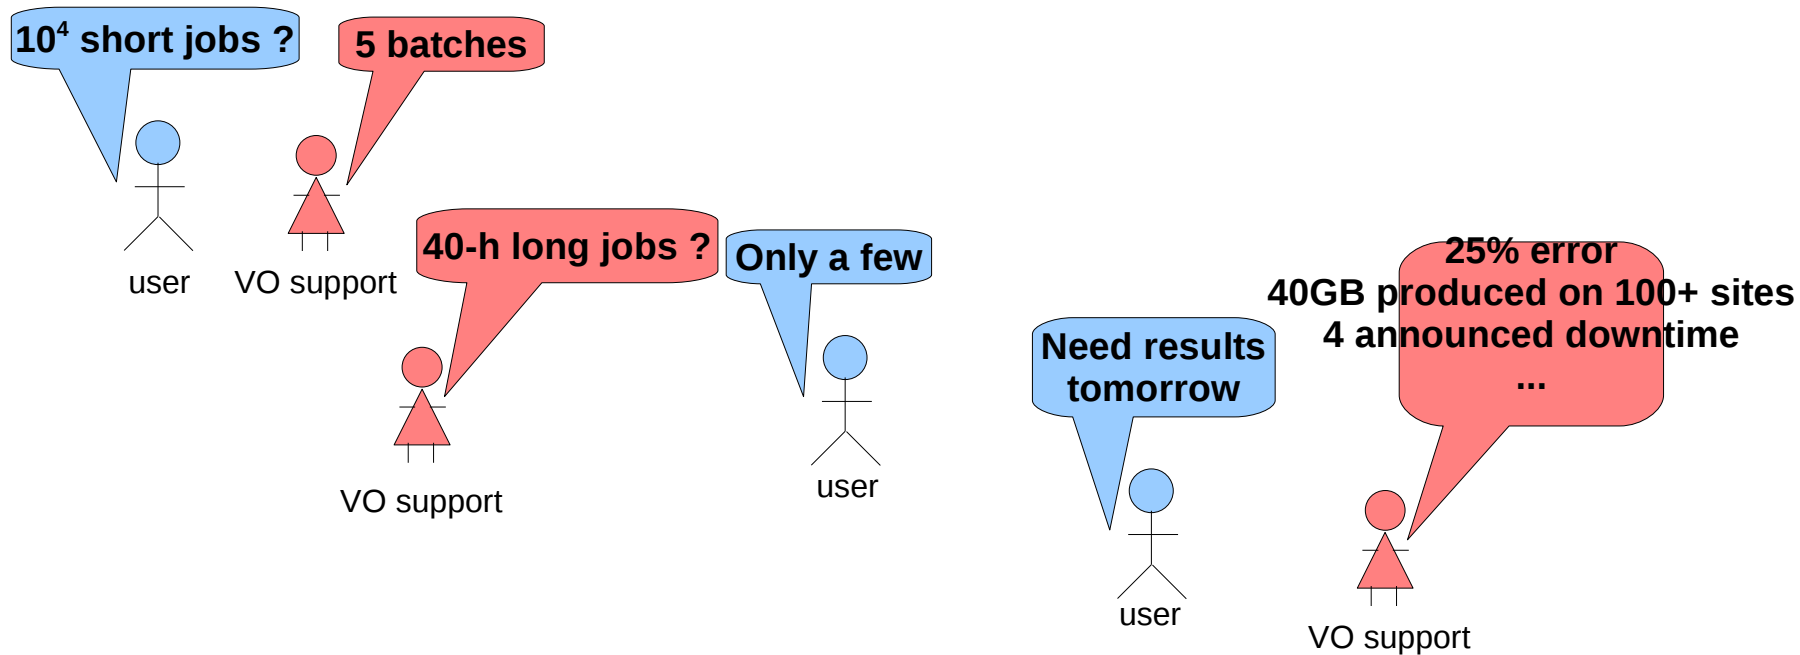

- **user level**

 “The file I have uploaded to the grid in December is not available”
=> Data placement and replication of permanent data ?
user

- **VO level**

 “Storage Element is full / being decommissioned ; please organize migration”
=> Data placement and replication of VO data ?
site admin

Experiment planning

=> experiment planning effort

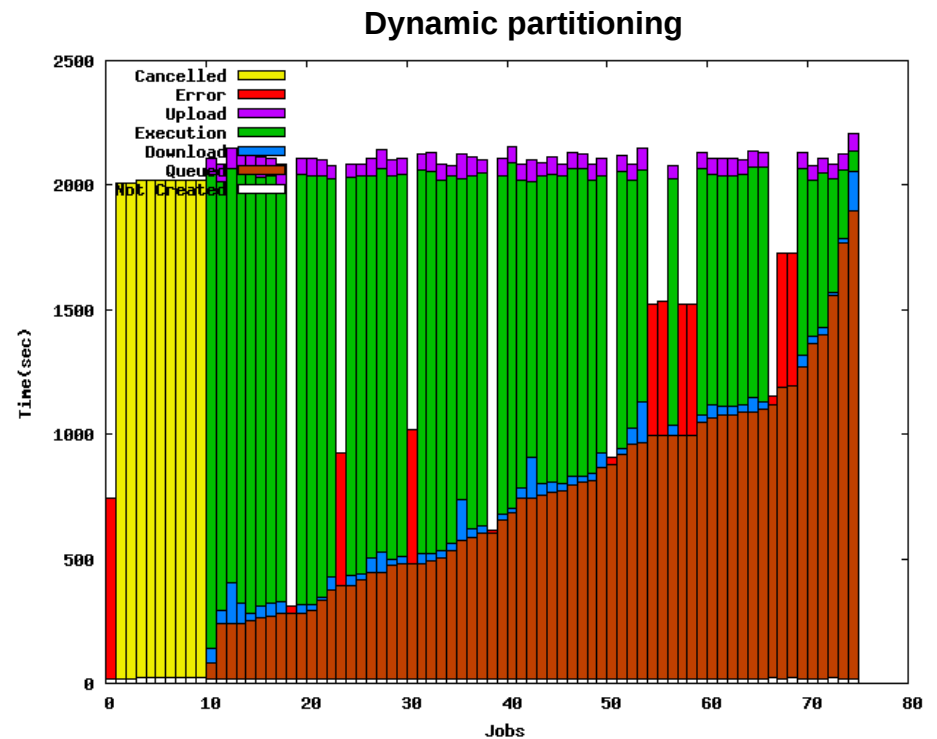

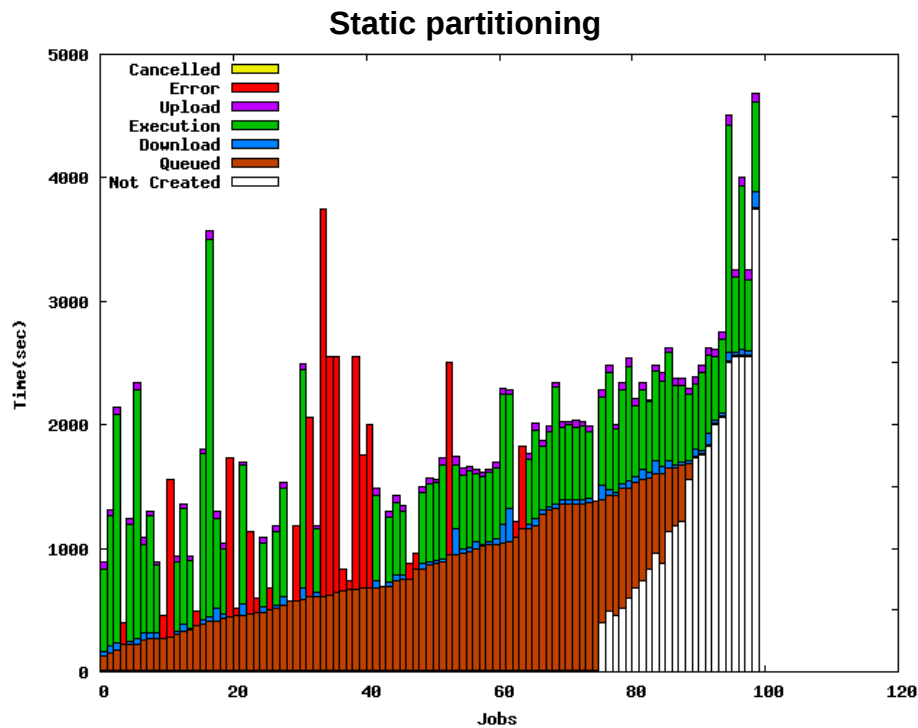

- plan experiment with user
- react to operational issues
- provide time-to-result estimates

Robust task scheduling

“99% of your experiment has completed ; the last 3 jobs will be available in 12 hours”

- adjustements for GATE simulations

Reliability

- **Job error handling**

- “I made a typo my file name”
- “200 jobs were resubmitted 10 times”

- => detect permanent VS temporary errors ; local VS grid-wide errors ; user VS system errors

- **Recovery**

- “only two of your 5,000 jobs failed”
- “which ones ?”

- **(week-)long experiments**

- “The server hosting your experiment had to reboot: your workflow has been killed”
- “It had been running for 3 days and was 53% complete...”
