

# Analysis in ATLAS

Europe/Paris timezone

Réunion des sites LCG-France, CC-IN2P3 Lyon

22-23 November 2010 CC-IN2P3, Villeurbanne

# Analysis: which one?

- Grid Analysis
- Group Analysis
- User Analysis
- ‘local’ Analysis
- Batch Analysis
- Interactive Analysis

**Analysis** is the process of breaking a complex topic or substance into smaller parts to gain a better understanding of it.

~NOT covered

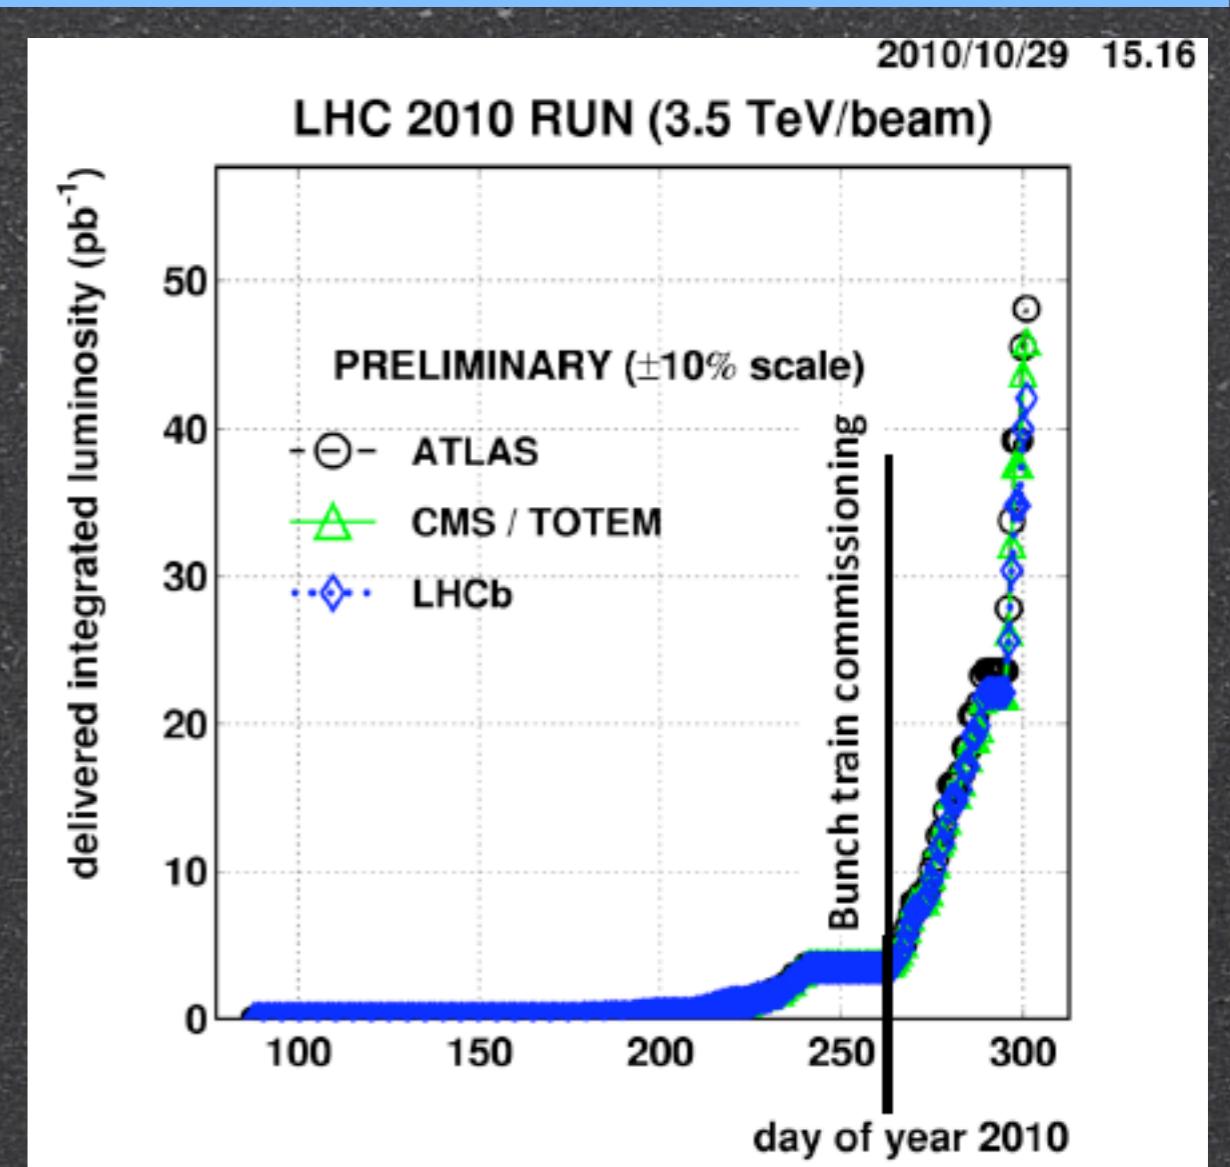

# Analysis...

- Which kind of data format (dataset)
  - RAW, ESD, AOD, DPD, ...
- Which tool
  - ATHENA (ATLAS software)
  - ROOT

# Warnings . . .

~50 pb<sup>-1</sup> delivered, half of it in the last week !

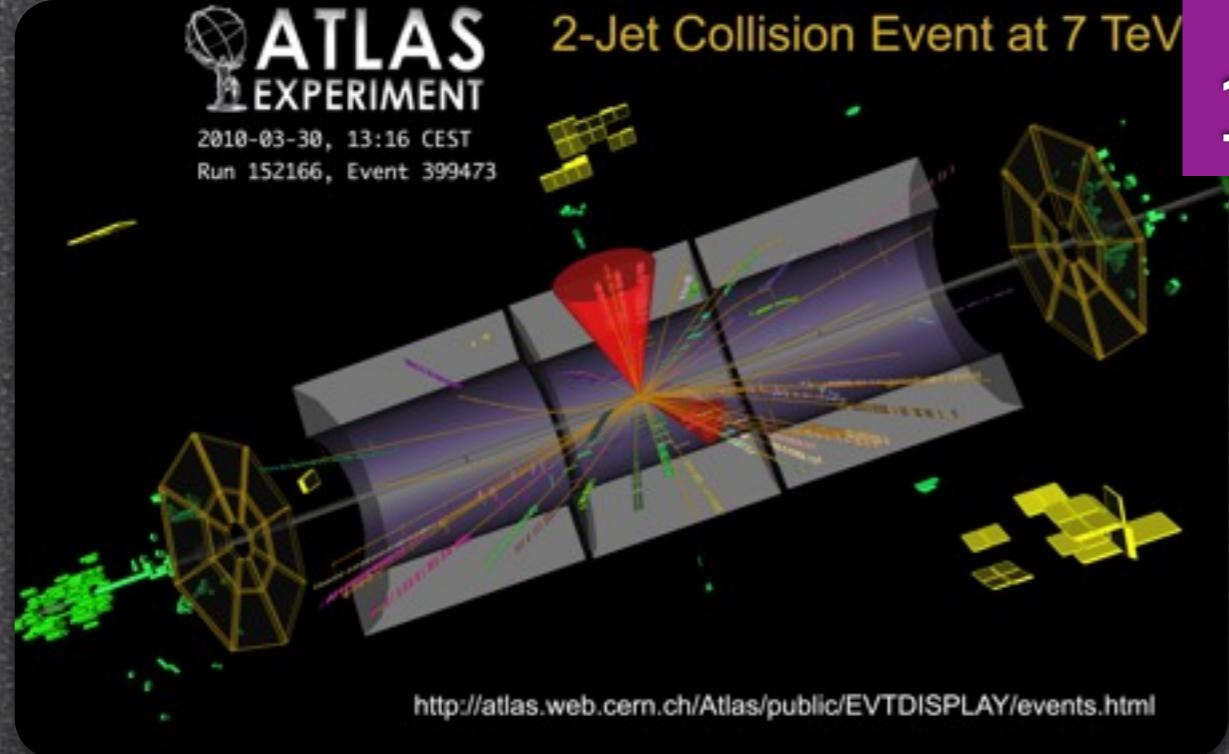

- Analysis pattern will change
- Most of data taken during last month
- Reprocessed data not yet available

Roger Bailey Nov. LHCC

# ATLAS Datasets

+200Hz ~ L indep.

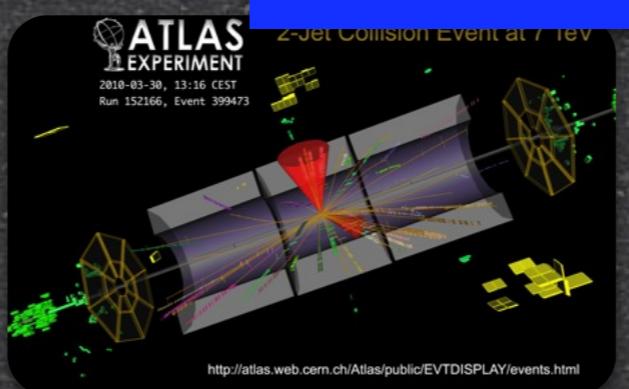

RAW  
1.6 MB/evt

2 copies

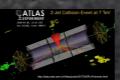

ESD  
0.8 MB/evt

2 copies  
guaranteed

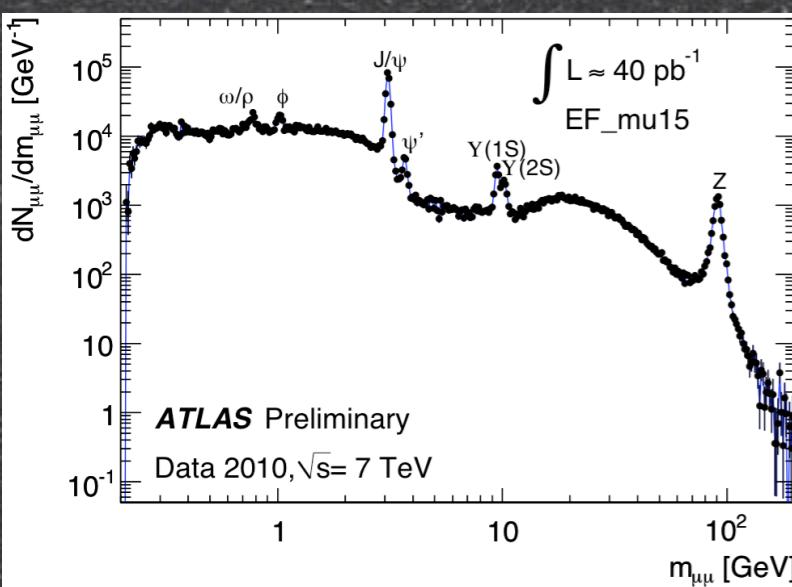

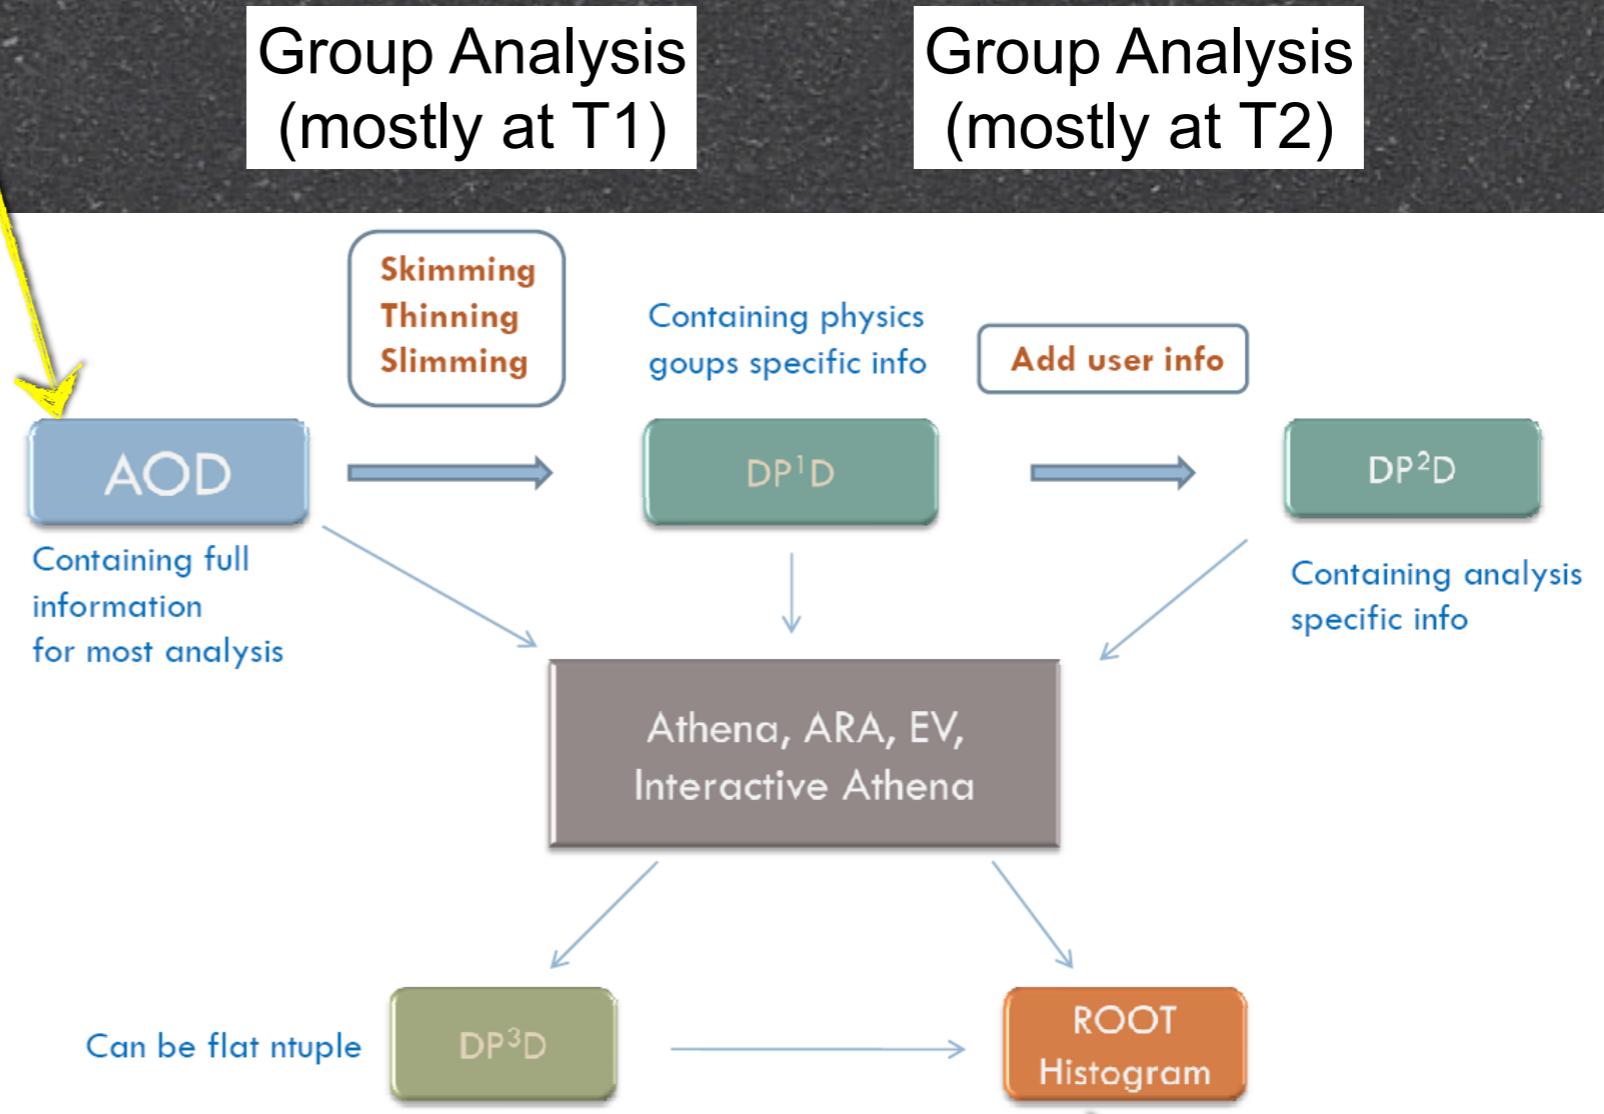

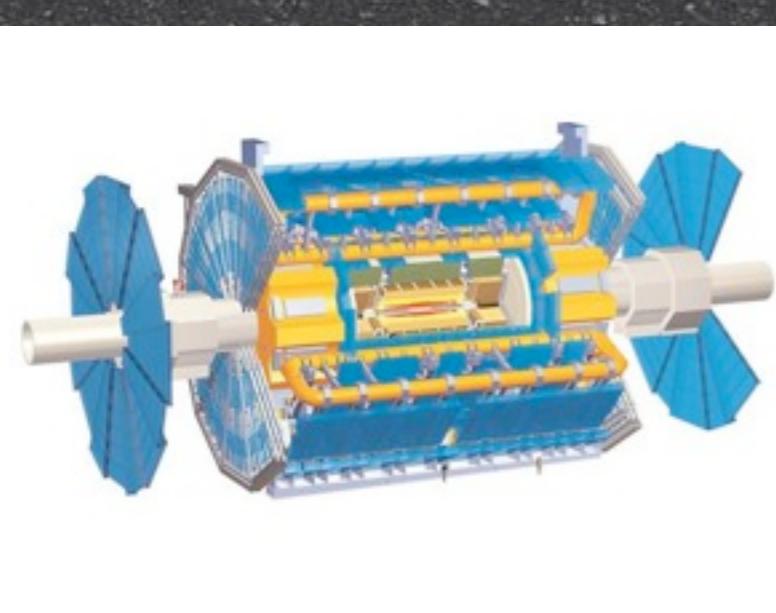

AOD  
(physic oriented)  
0.15 MB/evt

DESD  
(detector performance  
oriented)  
0.15 MB/evt

10 copies  
guaranteed

# Initial Analysis Model

# What are DPDs?

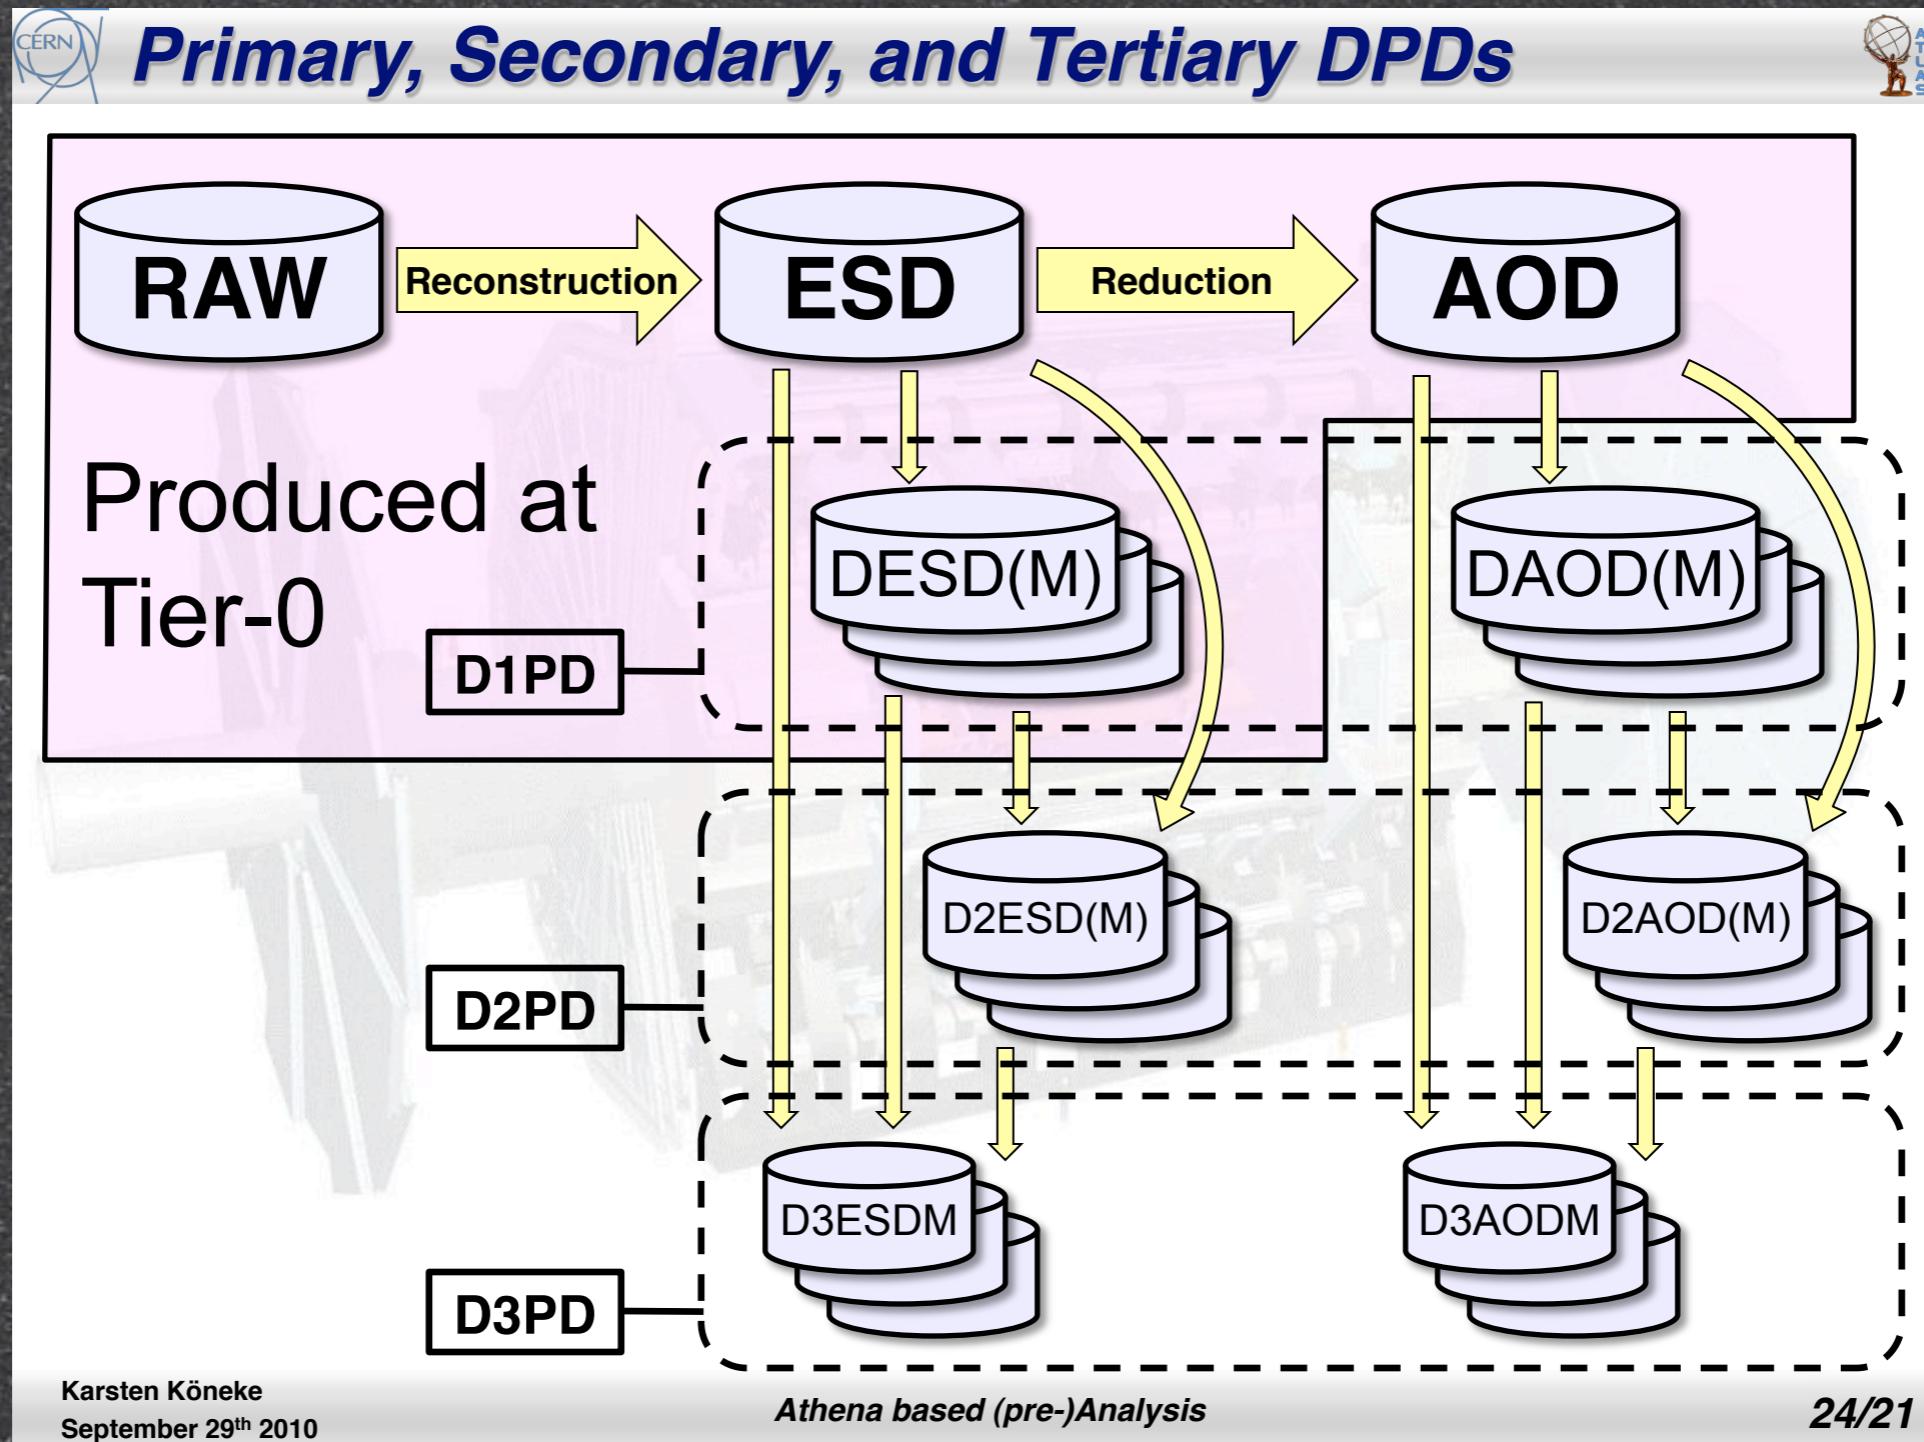

A reduced version of the full datasets (ESD, AOD):

- This reduction can be achieved in several ways:
  - **Skimming:** Event selection (e.g., keep events with two good electrons)
  - **Trimming:** Removing whole containers (e.g., remove the CaloCellContainer)
  - **Thinning:** Remove individual objects from a container (e.g., keep only CaloCells near an electron)
  - **Slimming:** Remove parts of an object (e.g., remove redundant error matrix from TrackParticles)

2008 Analysis Model Forum Report:

- Define the D1PDs, D2PDs, D3PDs
- ATL-GEN-INT-2008-001; ATL-COM-GEN-2008-001

# Zoology

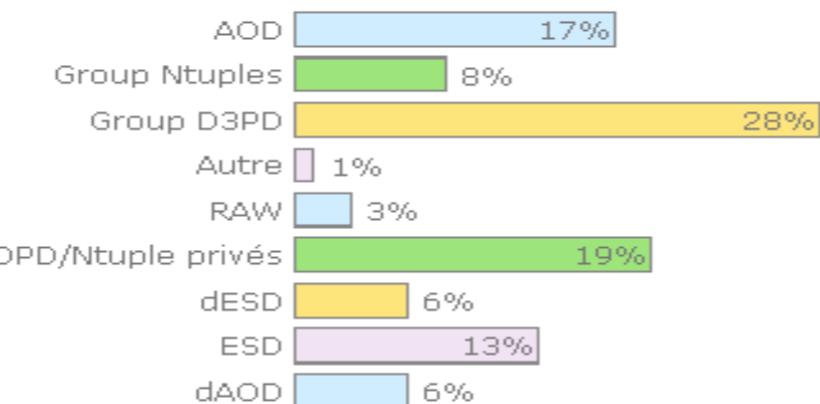

# Questionnaire PAF

Questionnaire submitted  
to Physics ATLAS France

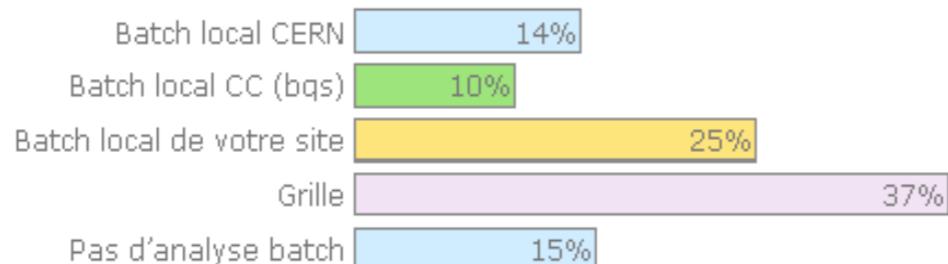

55 answers

\* 2. Quelles type de données utilisez vous préférentiellement ? [?](#)

ROOT format ~55%

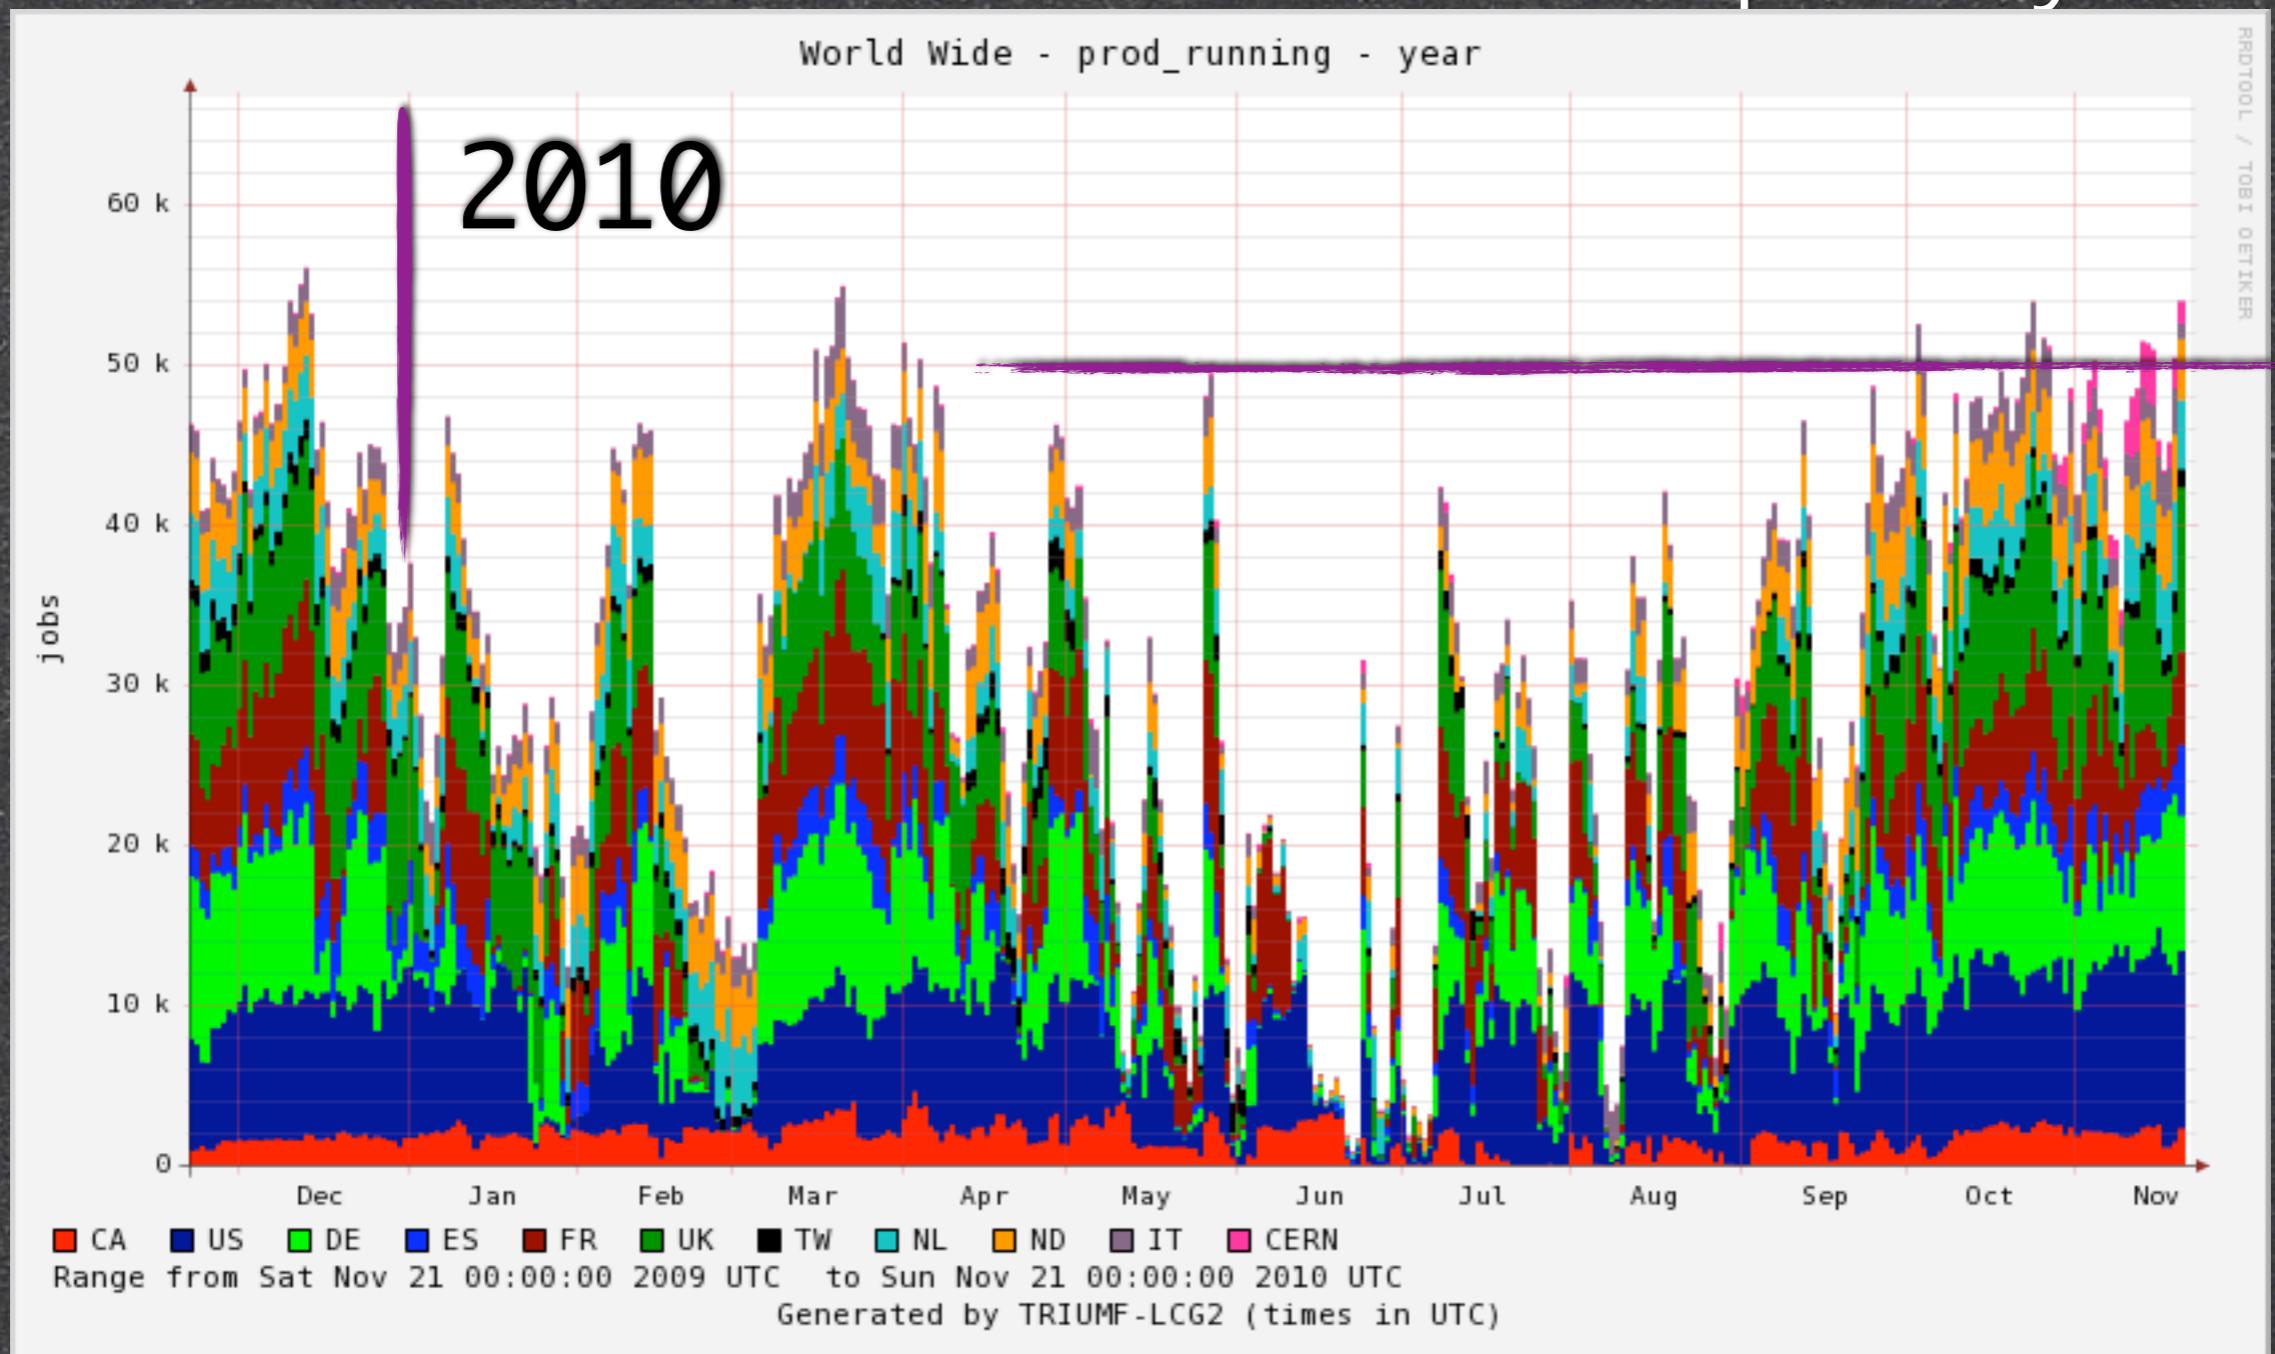

\* 4. Où faites vous principalement l'analyse batch ? [?](#)

# Grid Activity

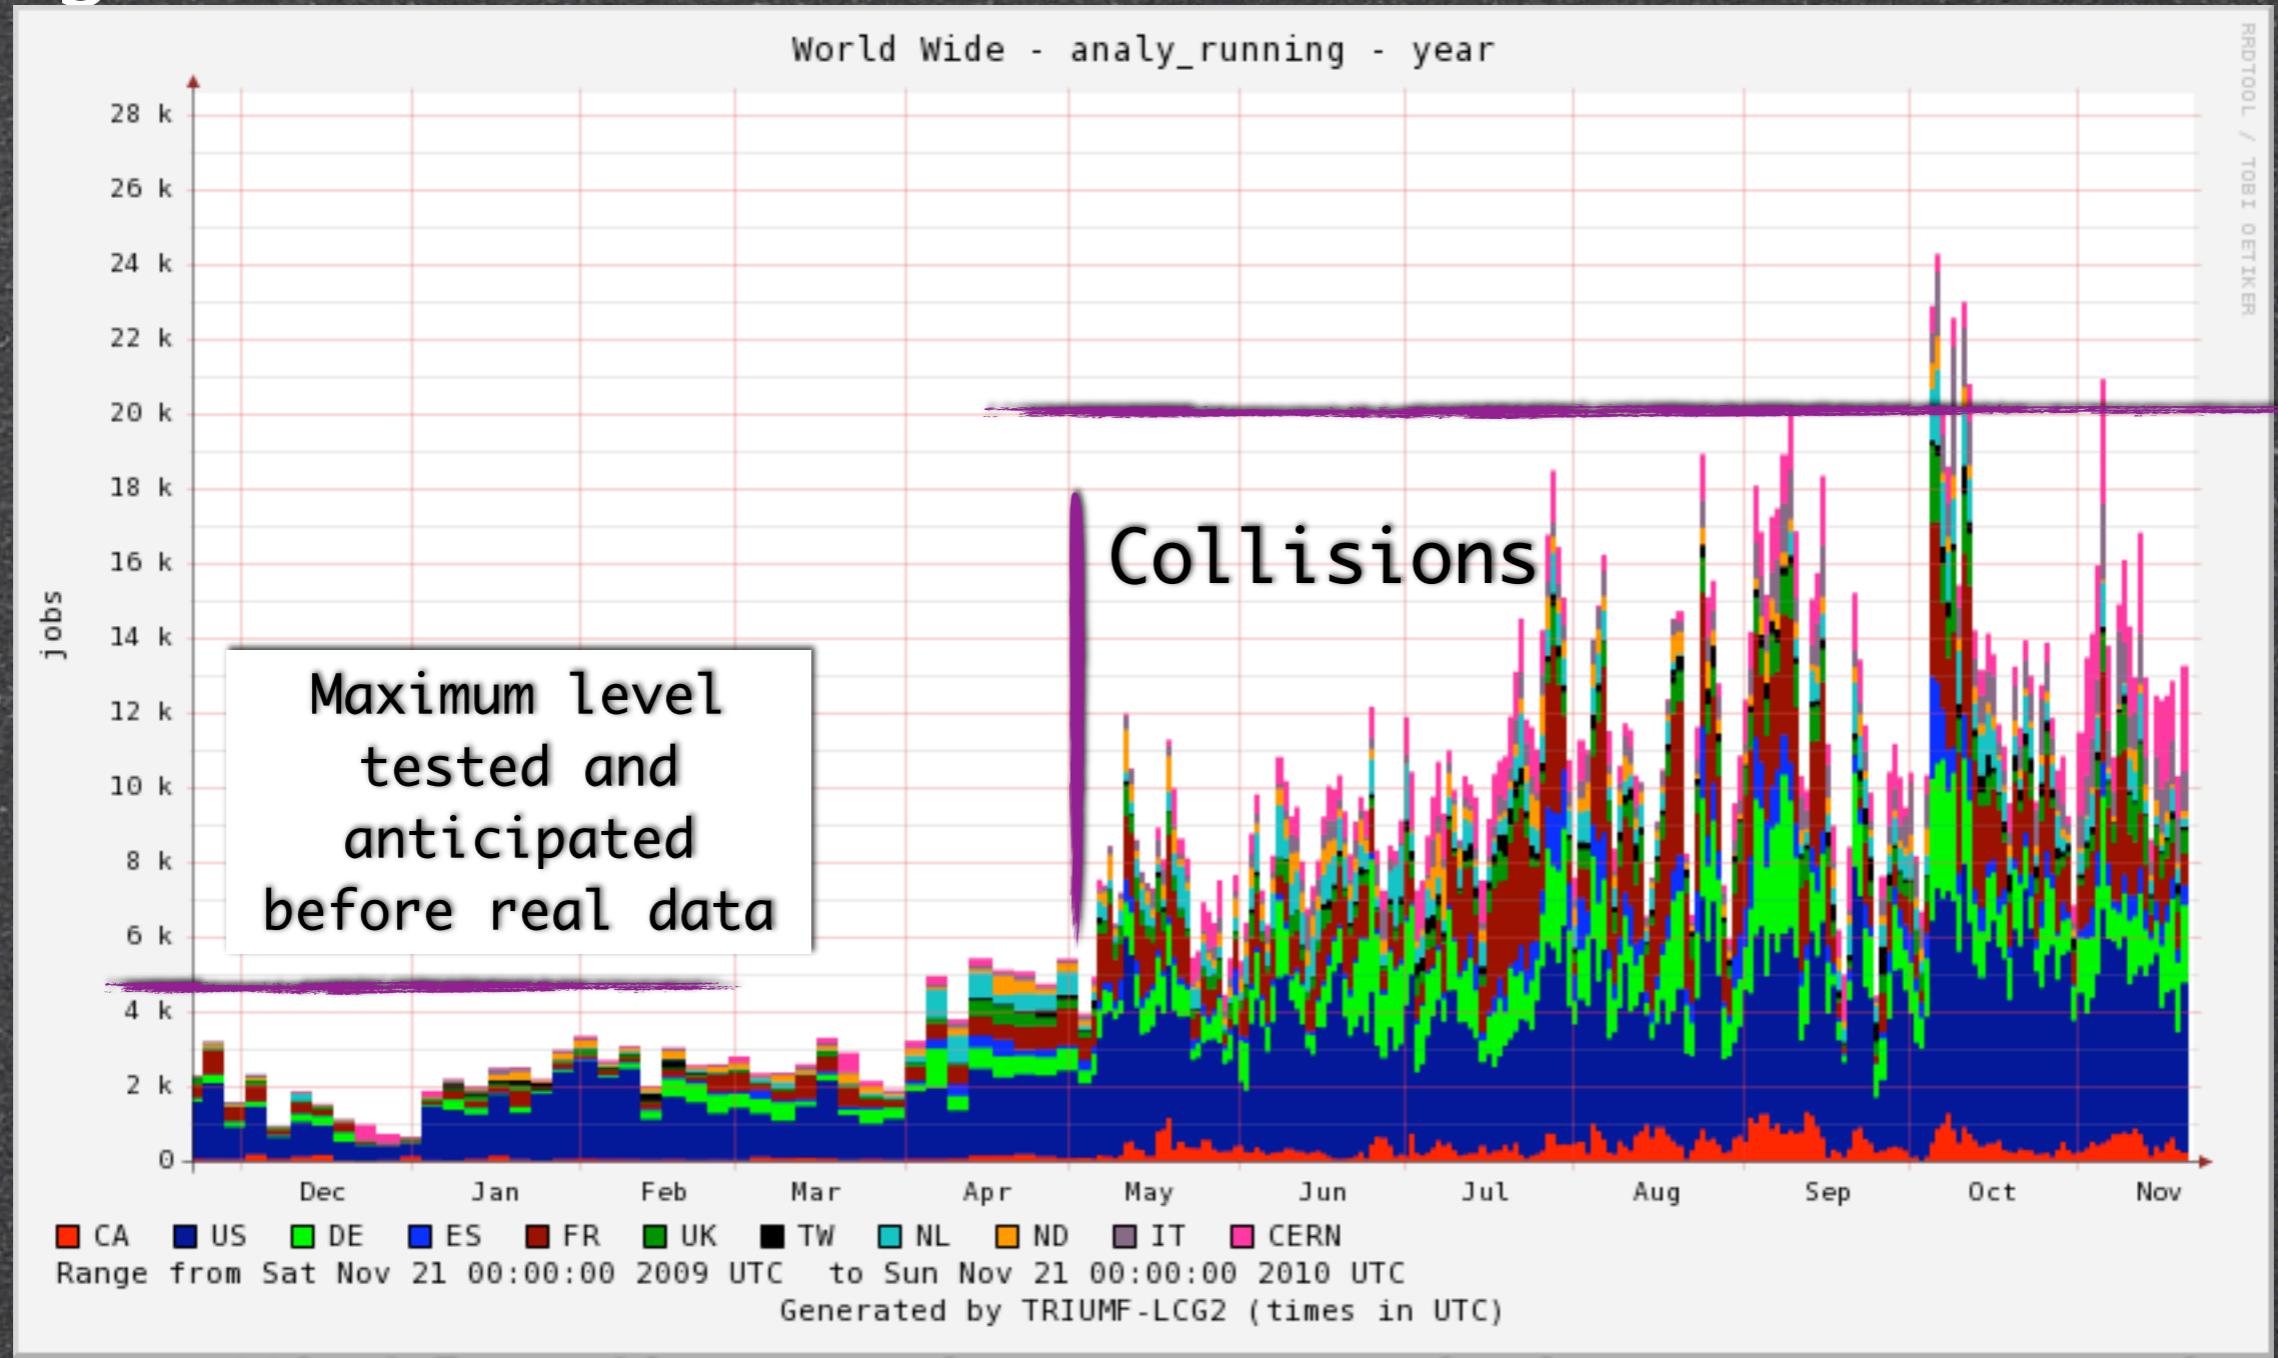

# Central Production

## Simulation + reconstruction + Group Analysis

# Analysis

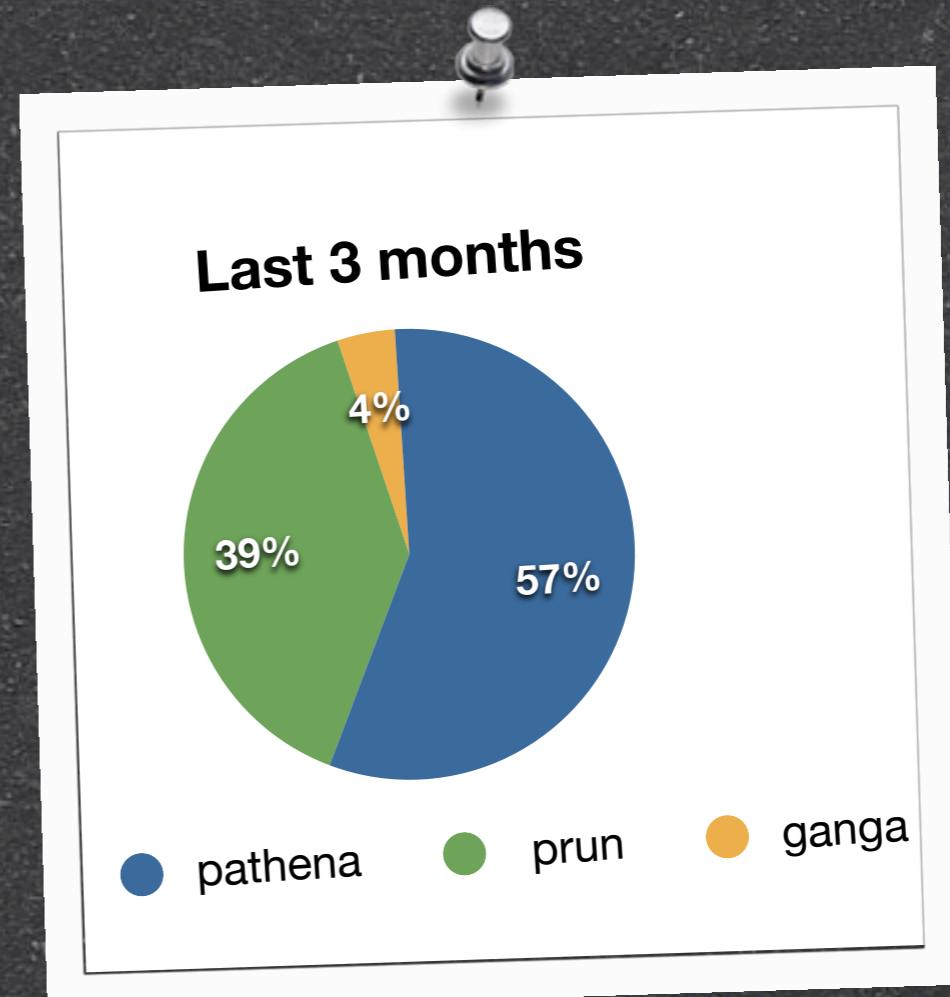

Ganga-WMS not accounted

Highly discontinuous activity on most sites..

# Grid Analysis

- Pilot based the standard now
- two submission tools talking to panda pilots
- panda
  - pathena : ATHENA jobs
  - prun : ROOT
- Ganga-panda
- Ganga-WMS not supported from 2011

Users use ROOT on the Grid...

# Changes in data placement...

- High demand on ESDs
  - available mostly at T1s
- ~none of some other dataset formats
- Some sites have free CPUs but not the popular data
- Less rigid data placement thanks to
  - Dataset popularity measurement
  - Efficient Central deletion service
  - Mature Data distribution tools & monitoring

**Adaptability**

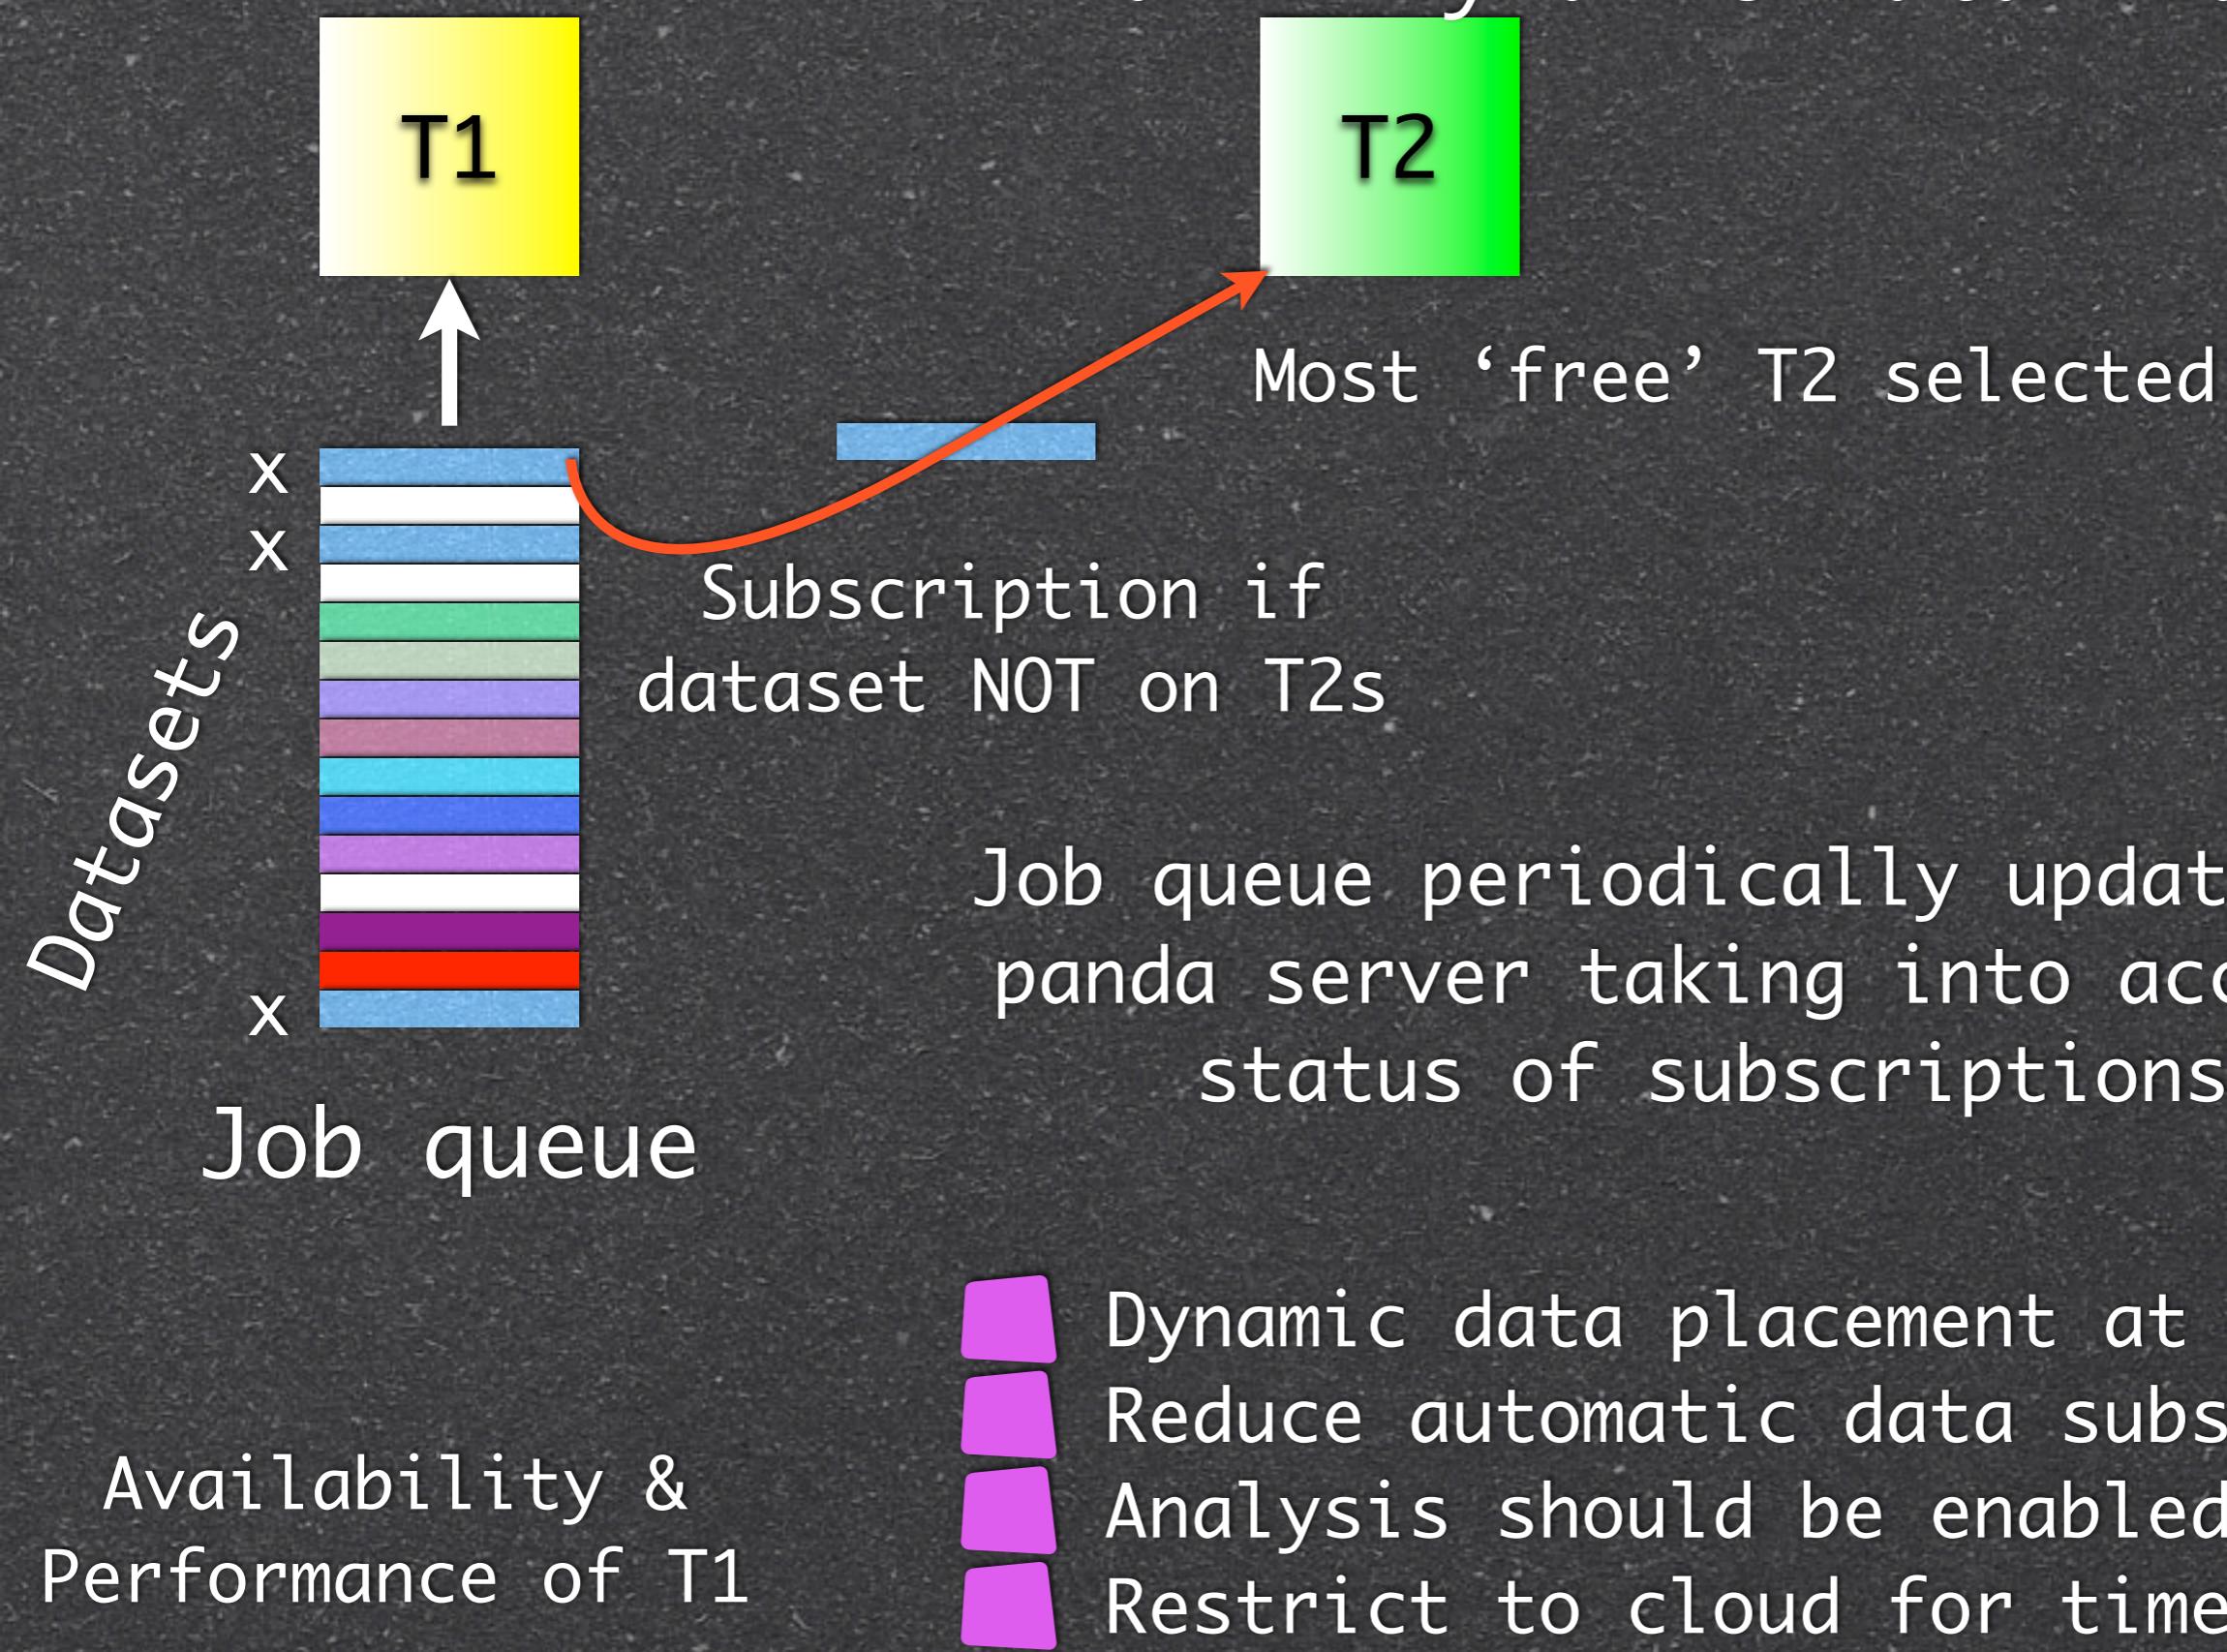

# 7 TeV data on DISK

## Changes

- RAW : 1 copy over 9 T1s  
(lyon : 15 %)
- AODs : 2 primary copies over T1s
- ESD : 2 copies over 9 T1s  
(BNL 100%, extra. is secondary)
- Lyon 100%
- GRID : 100%
- Lyon : 100% (DE, NL too...)
- Tokyo 100%
- To T2s **Dynamically**
- LAPP, LPC : 15%
- R0, Beijing : 10%
- Additional dynamic distribution
- DESDs stay at T1 (not used)

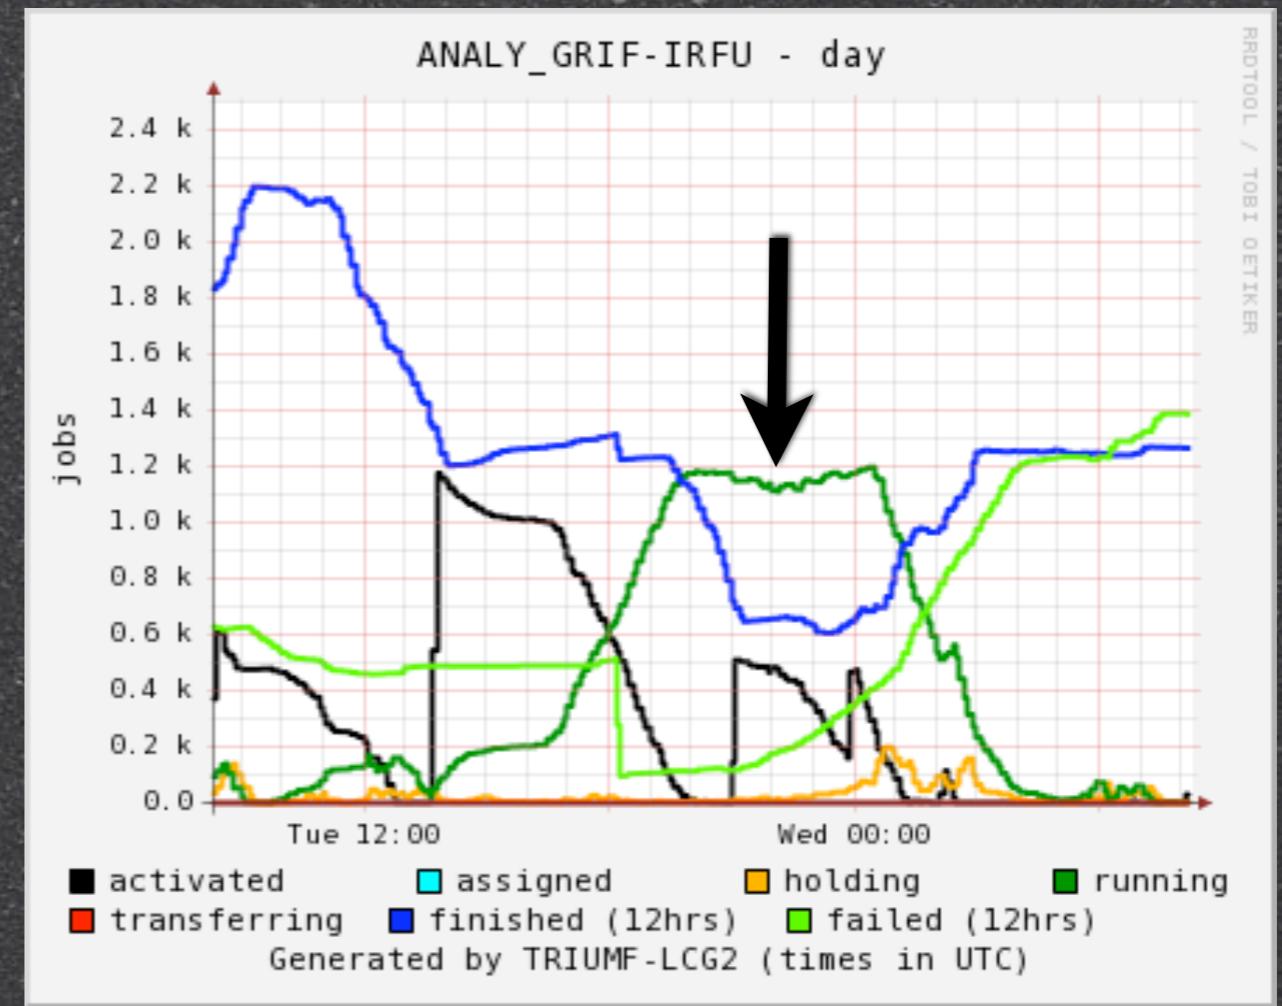

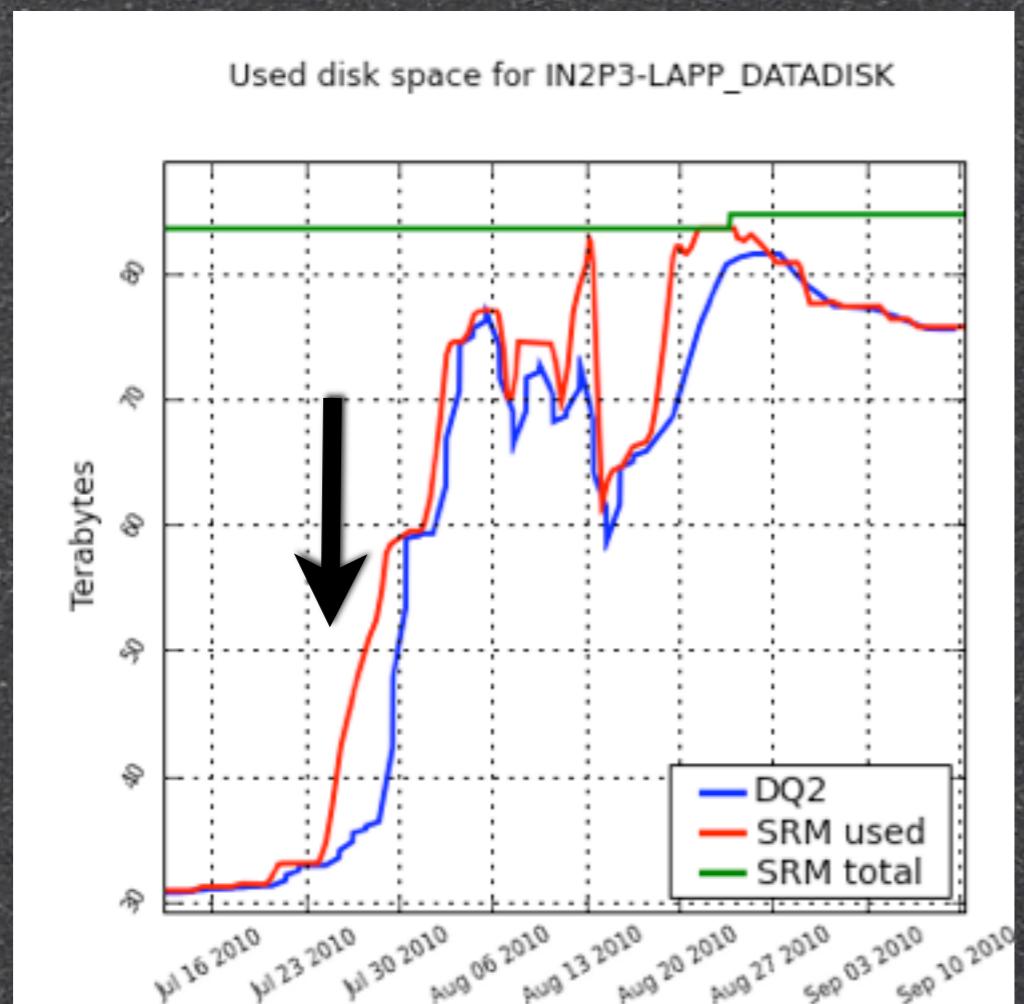

# PD2P

# PanDA Dynamic Data Placement

Dynamic data placement at T2s  
Reduce automatic data subscription  
Analysis should be enabled at T1  
Restrict to cloud for time being

# DP2D effects

Disk space filling  
and clean-up  
activated

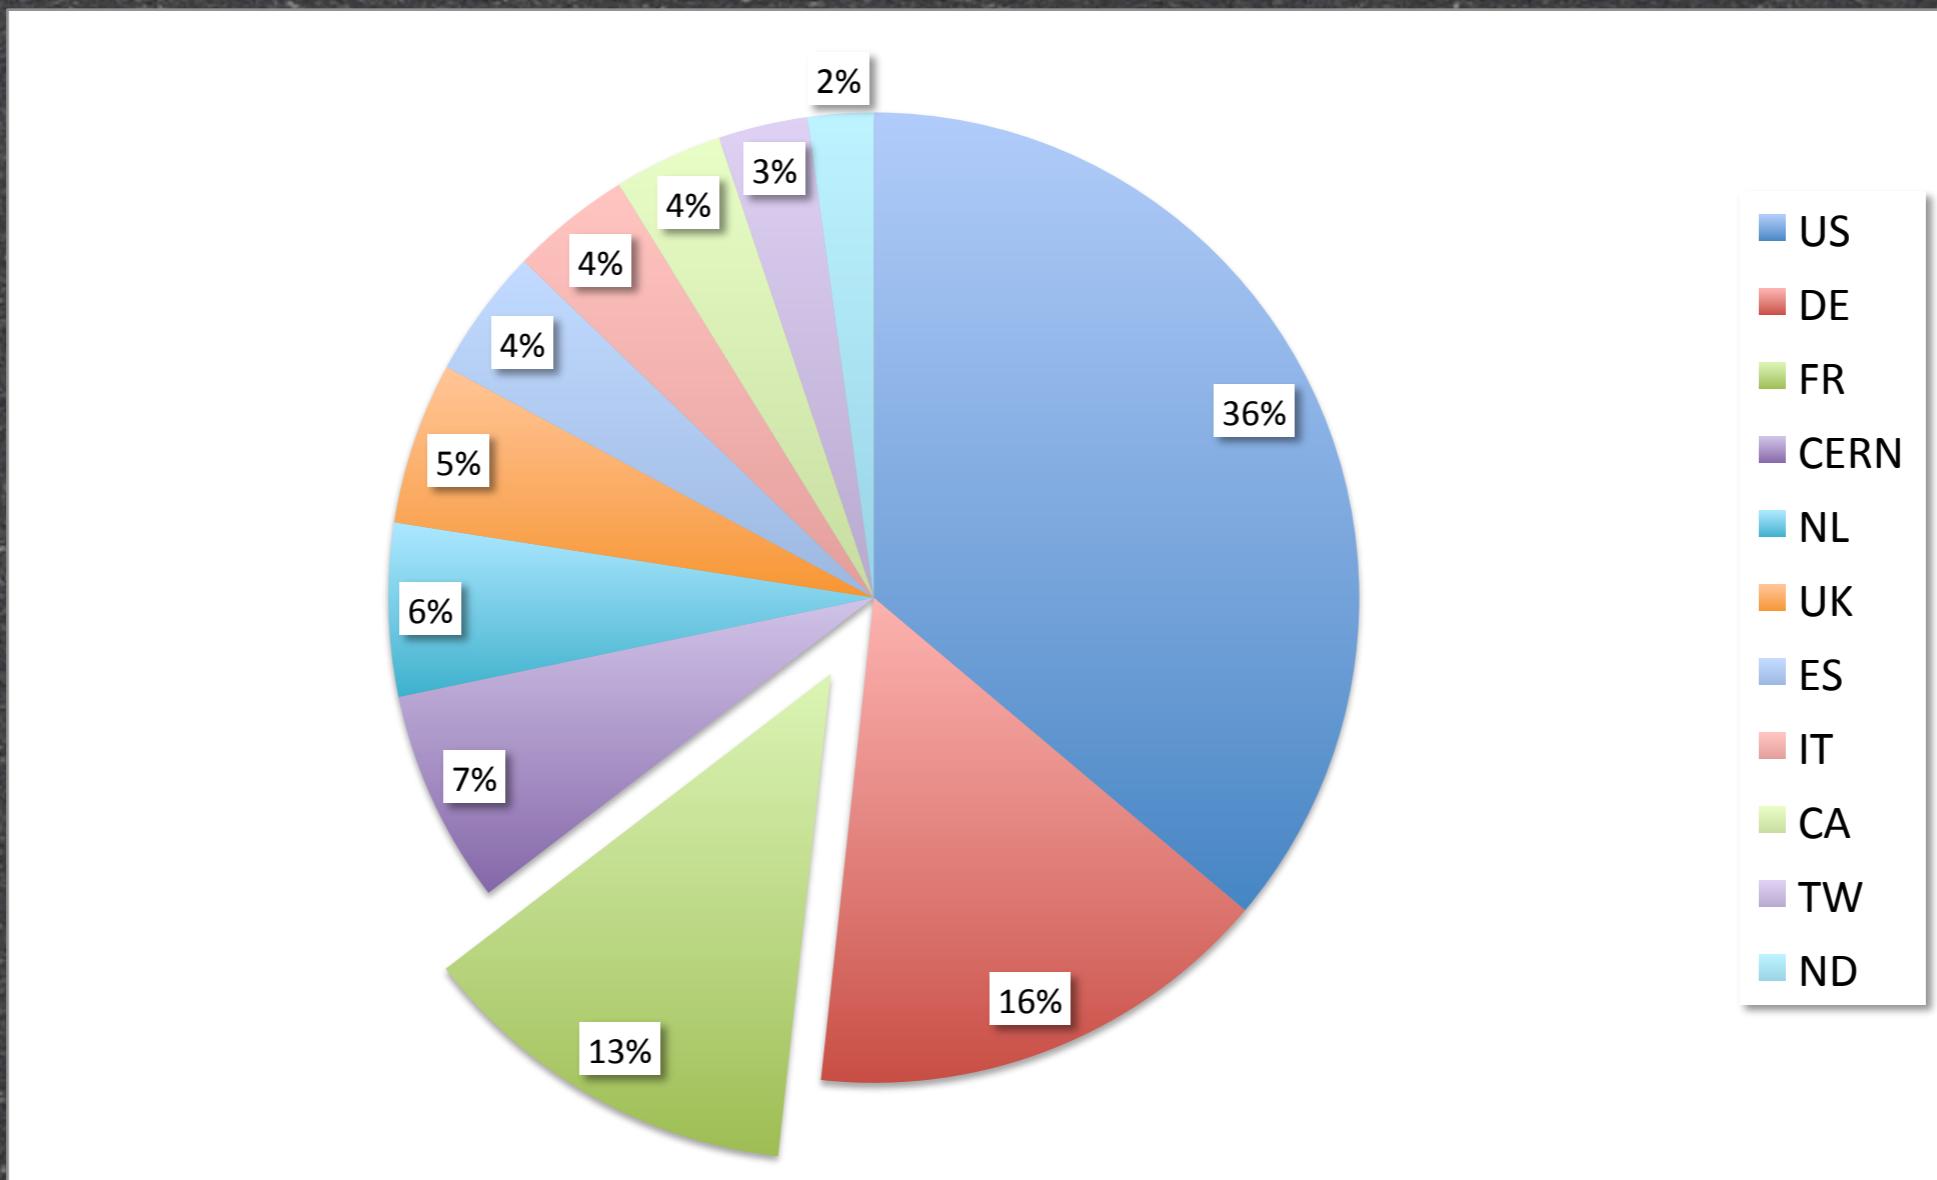

1.200 simultaneous  
analysis jobs at IRFU  
using ESDs

# Some statistics

- About grid analysis jobs
- By Cloud
- By site
- for [July - October]

# By Cloud

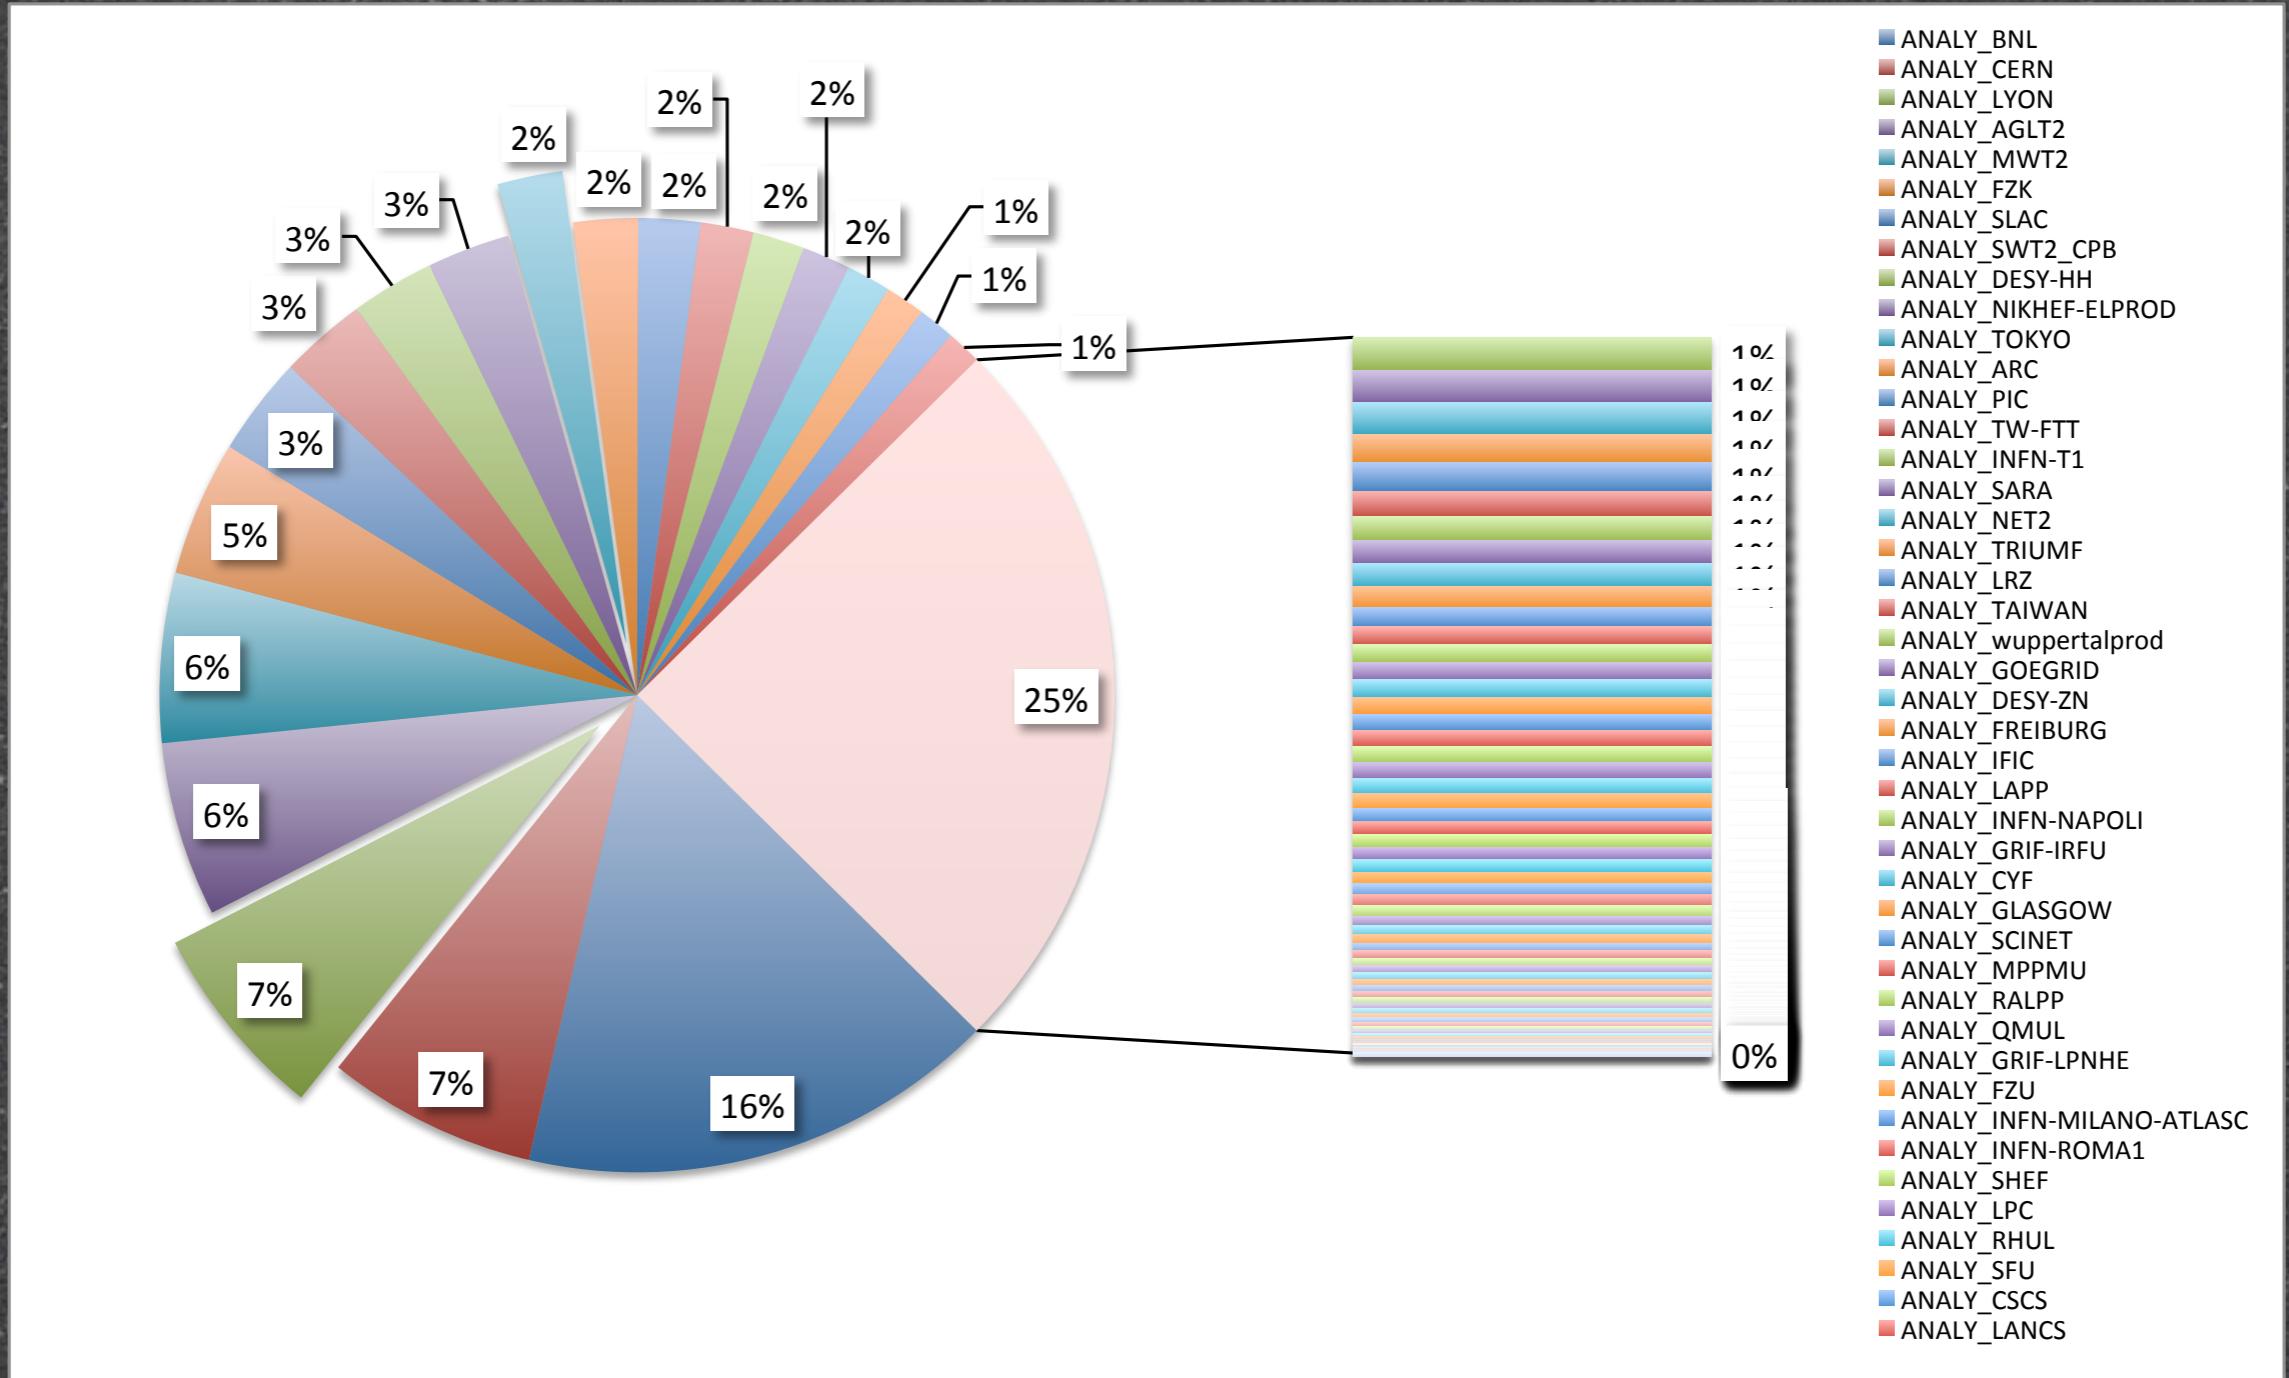

30,318,902 jobs

FR-cloud : 13%

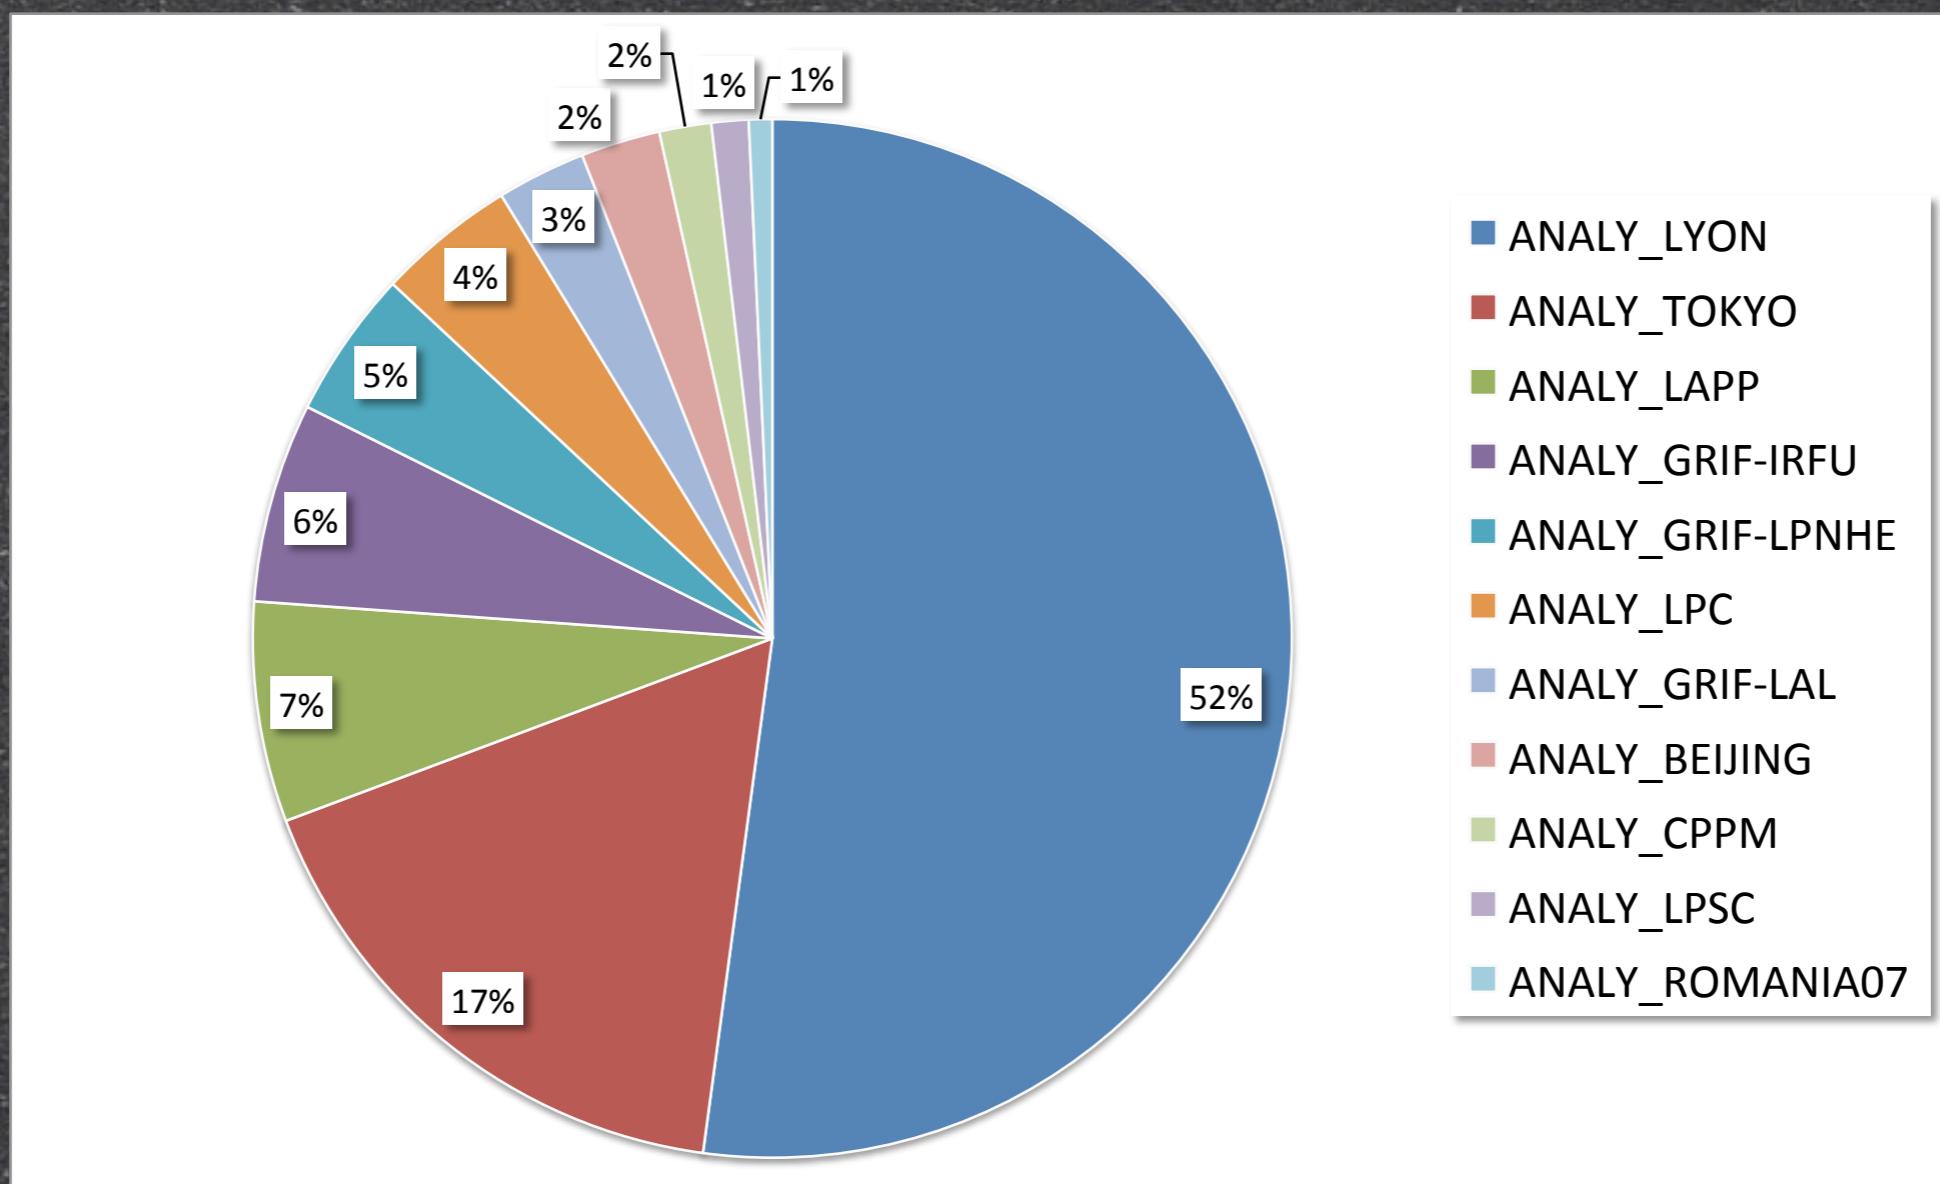

FR-sites : 10%

# By Site

All T1s (except RAL) in top 20 sites

# Analysis jobs on FR

3,897,724 Jobs

# Production & Analysis

- For T2s
- Production & analysis shares : ~50:50
- In CPU, Not in job number!
- Rapid job turn around needed

# Production

## Full load on Cloud

Sites to set right balance between Analysis & Production

# A word about T3s

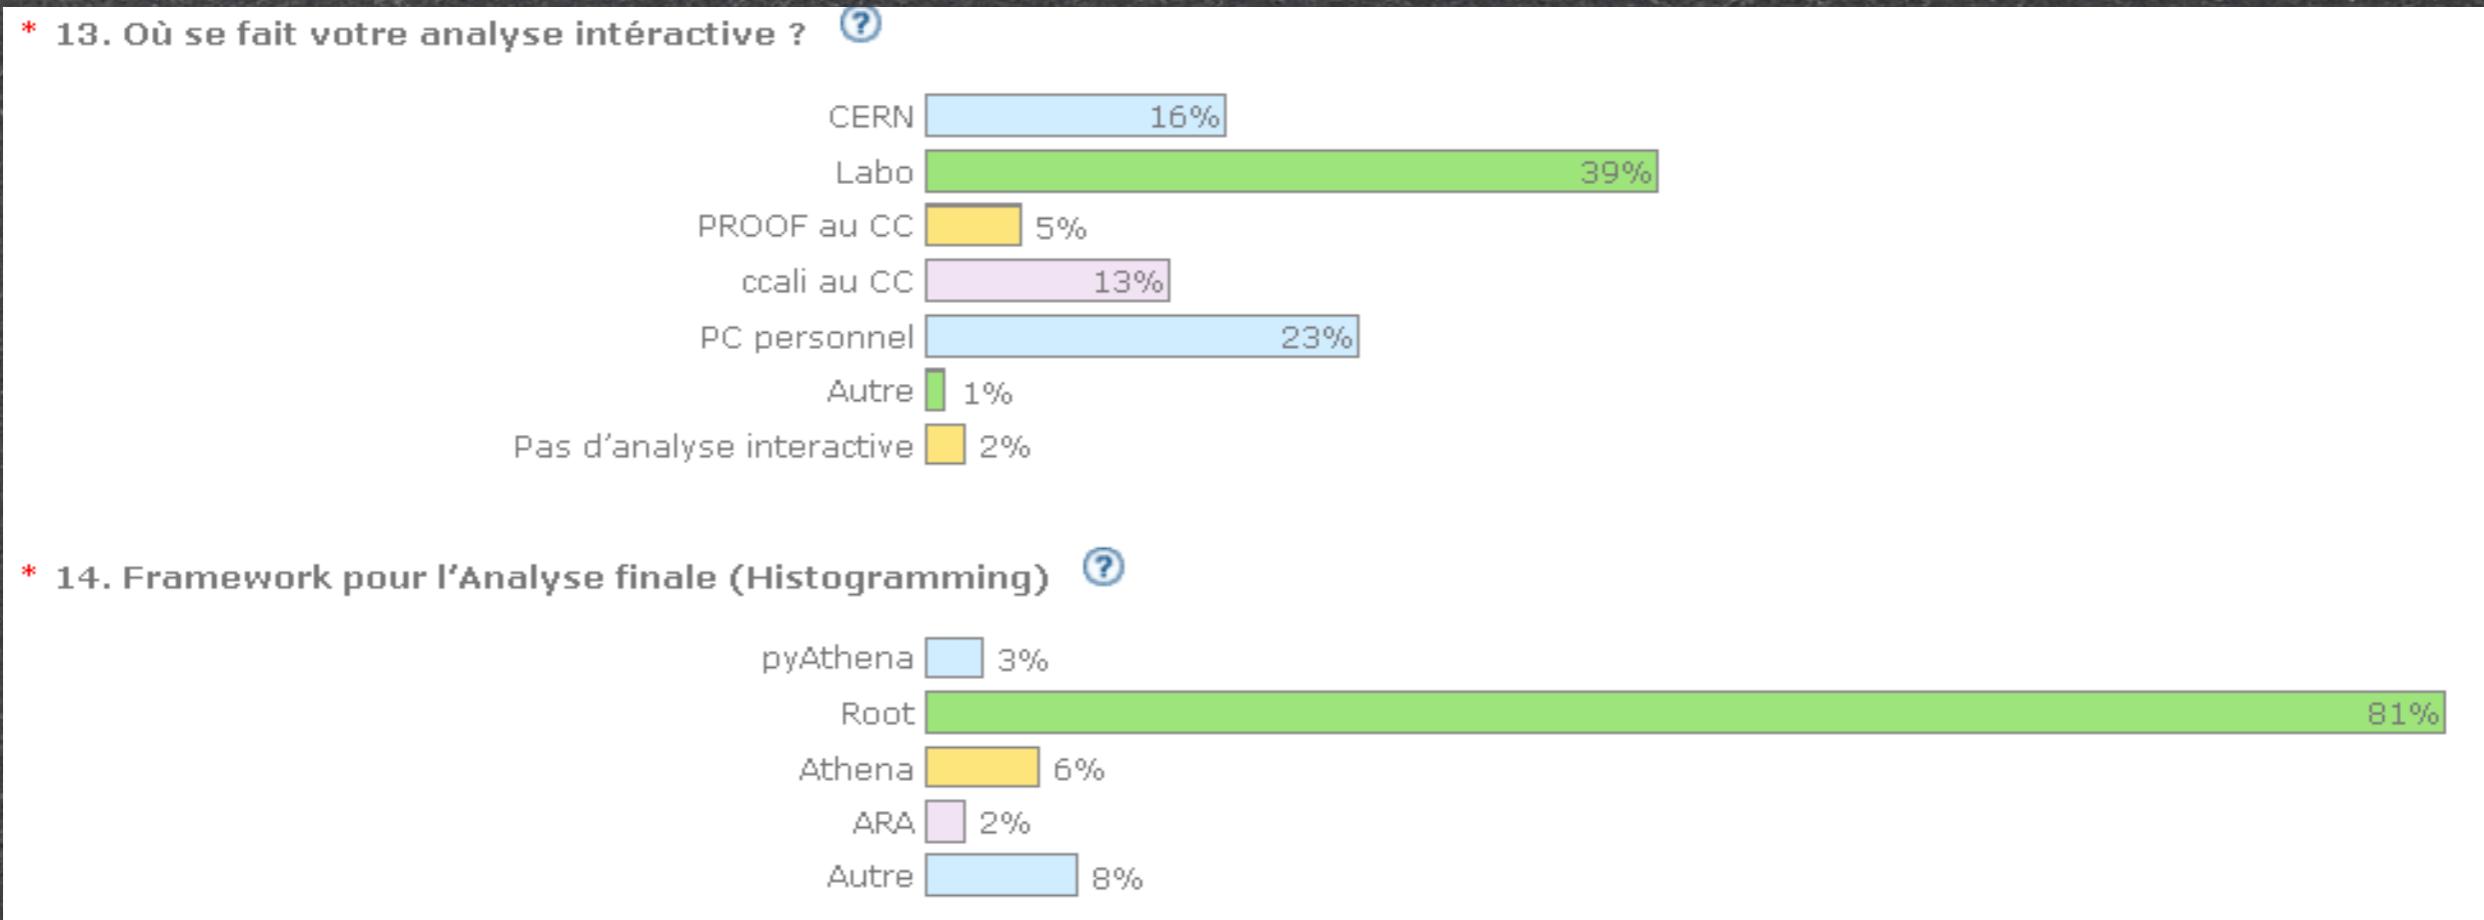

- T3 Grid resources
- All site have non-pledged resources for local users
- How to separate T2 from T3
  - Submission of pilots with **/pilot/fr** identity
  - In place at Lyon
  - To be deployed on all French sites

# Interactive Analysis

- The ‘final touch’
- At home-lab
- User PC
- At Lyon
  - ccali
- Experimental PROOF farm

# Final stage of analysis

20% @ Lyon

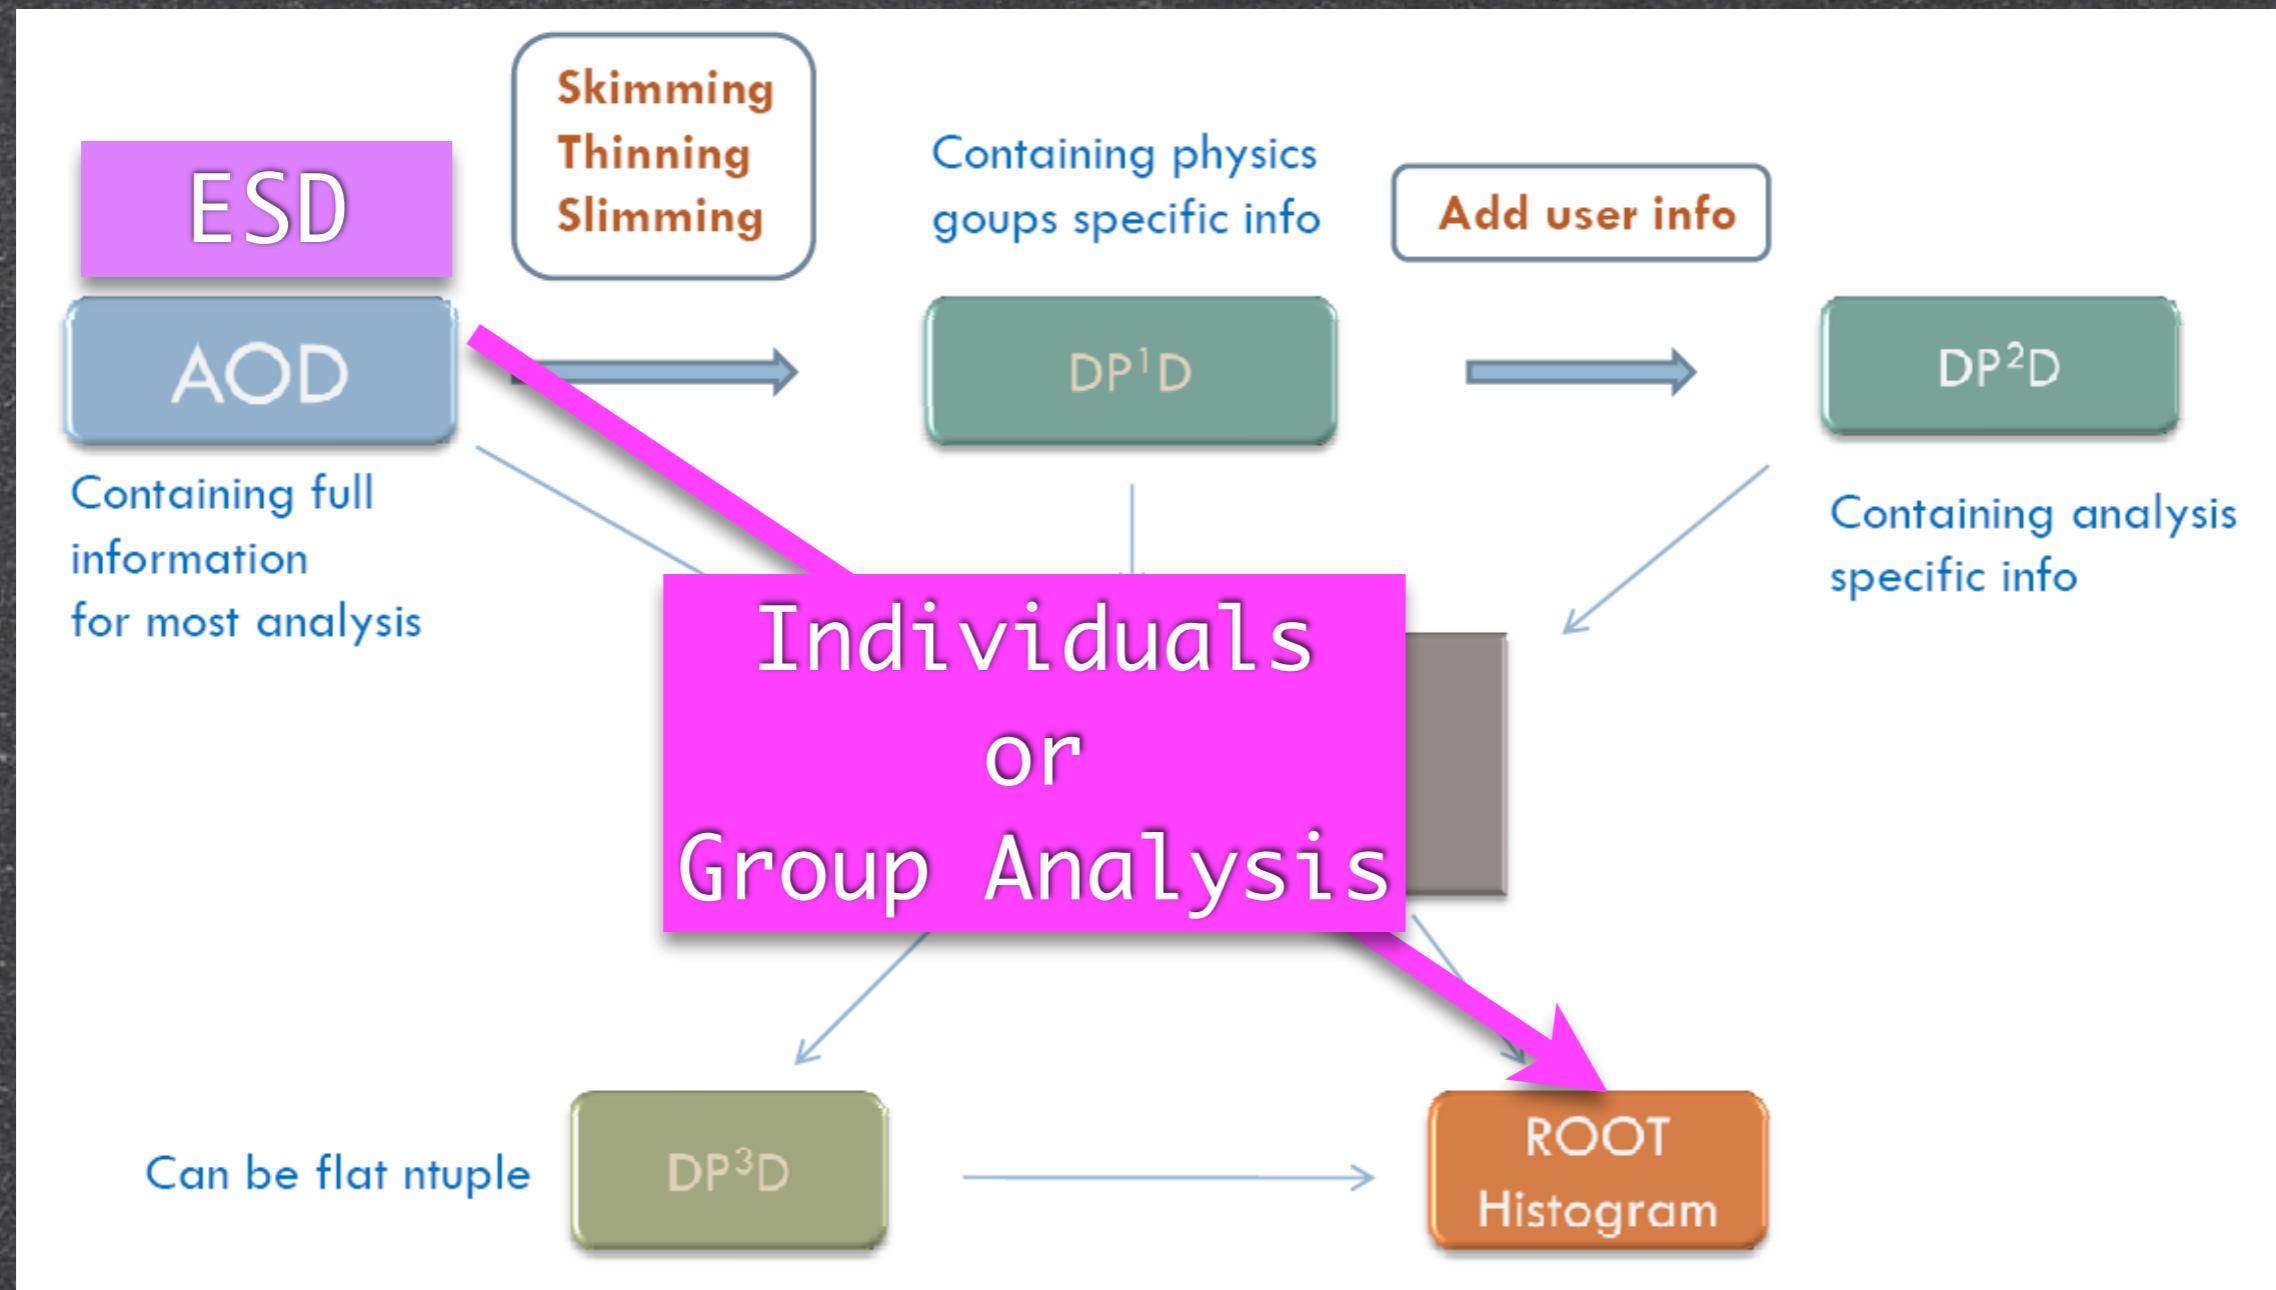

80% ROOT

# PROOF @ Lyon

- Experimental farm
  - Might be useful for dedicated applications
  - 100TB dedicated Xrootd storage
  - Handful of users
  - Future of the facility evaluated in 2011
    - Stop or Continue?

# The actual analysis model

Is it Scalable?

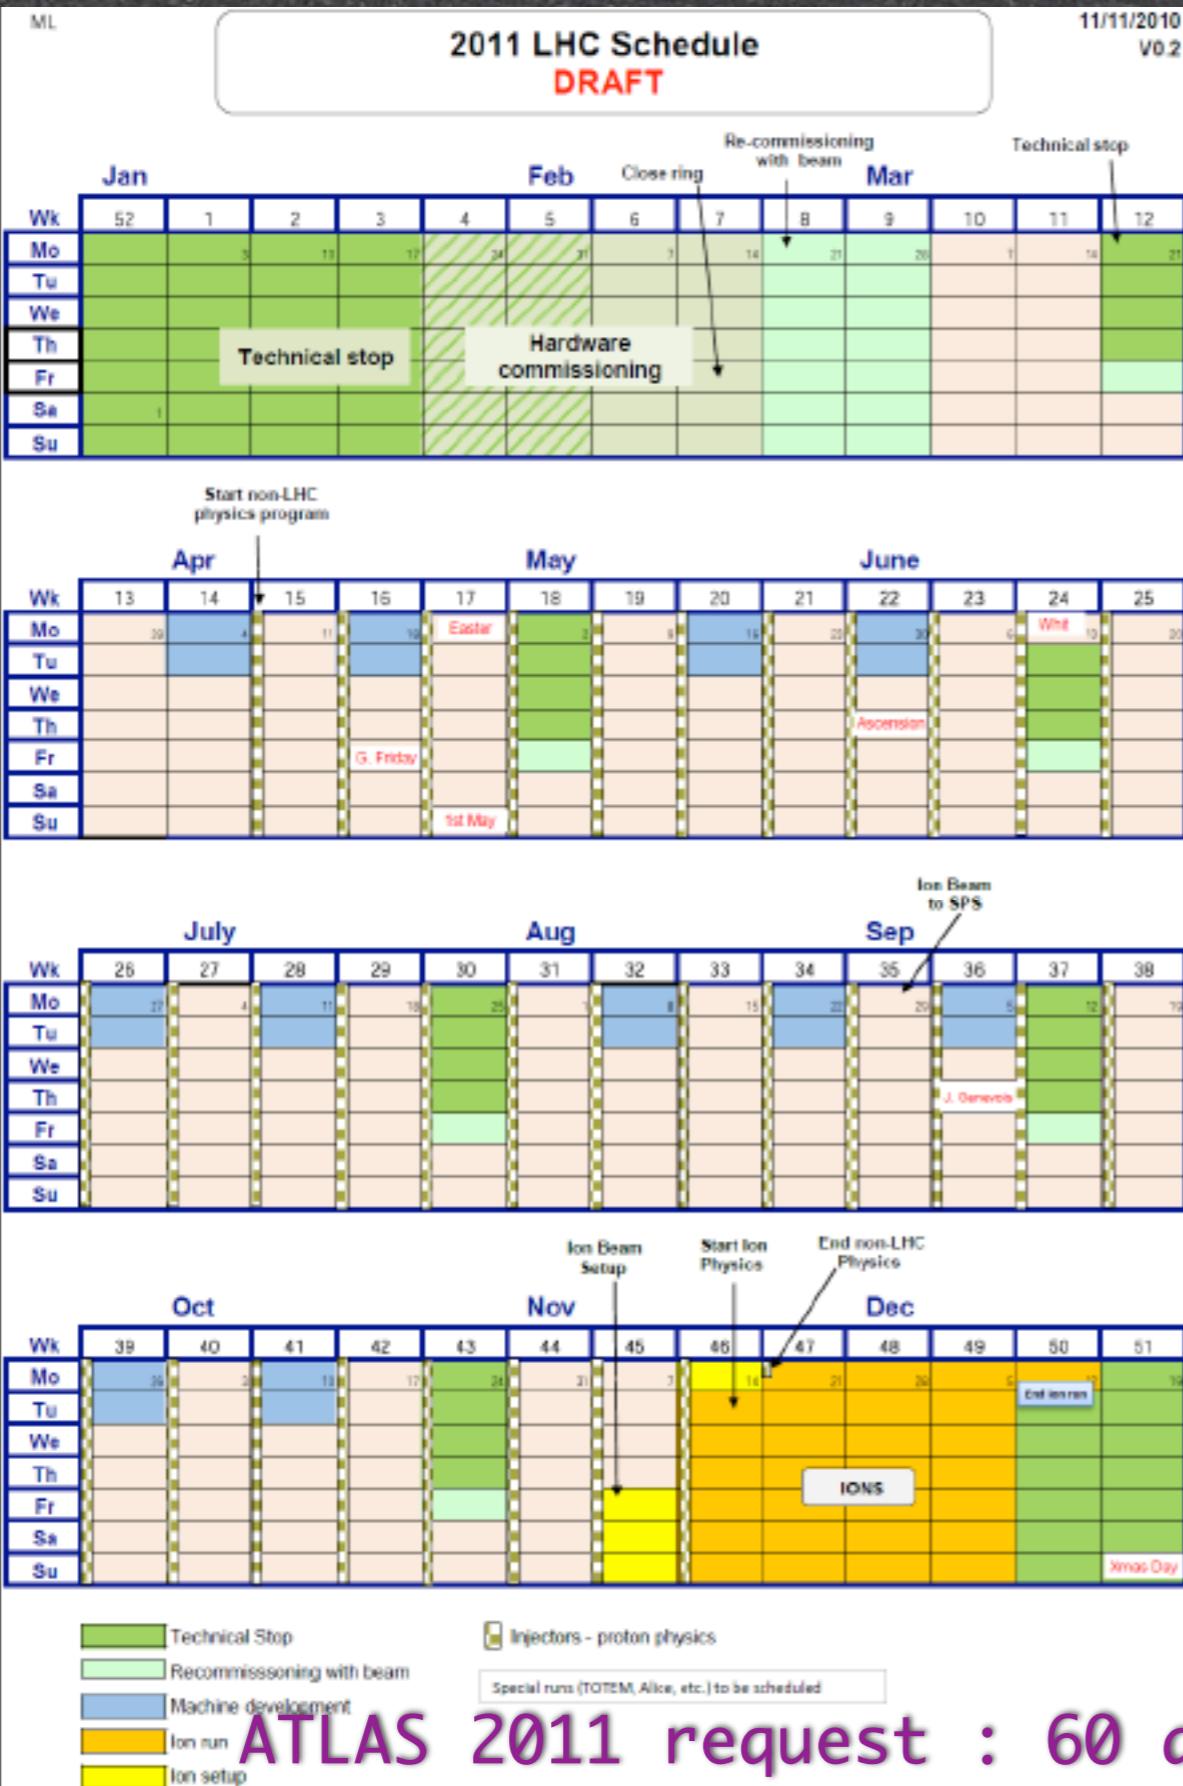

Individual User Analysis  
(mostly at T3)

# Summary

- Much more Grid analysis jobs than anticipated
  - France has provided a bit less than its share
- Mature Grid and monitoring tools :
  - Adaptability
  - Will go away from rigid cloud model and data pre-placement
- Users go directly to ROOT
  - Scalability? Common ATLAS framework needed?

What next ?

# 2011

- Beam back around 21<sup>st</sup> February
- 2 weeks re-commissioning with beam (at least)
- 4 day technical stop every 6 weeks
- Count 1 day to recover from TS (optimistic)
- 2 days machine development every 2 weeks or so
- 4 days ions set-up
- 4 weeks ion run
- End of run – 12<sup>th</sup> December

**~200 days proton physics**

# 2011

## 2011: “reasonable” numbers

- 4 TeV (to be discussed at Chamonix)
- 936 bunches (75 ns)
- 3 micron emittance
- $1.2 \times 10^{11}$  protons/bunch
- $\beta^* = 2.5$  m, nominal crossing angle

Peak luminosity	$6.4 \times 10^{32}$
Integrated per day	$11 \text{ pb}^{-1}$
200 days	$2.2 \text{ fb}^{-1}$
Stored energy	72 MJ

*Usual warnings apply – see problems, problems above*

- 50 times more data than 2010 ‘guaranteed’
- 2 times more than anticipated for resource planning

## Which resources for LCG-France?

<http://indico.cern.ch/conferenceDisplay.py?confId=112439>

## Ultimate reach

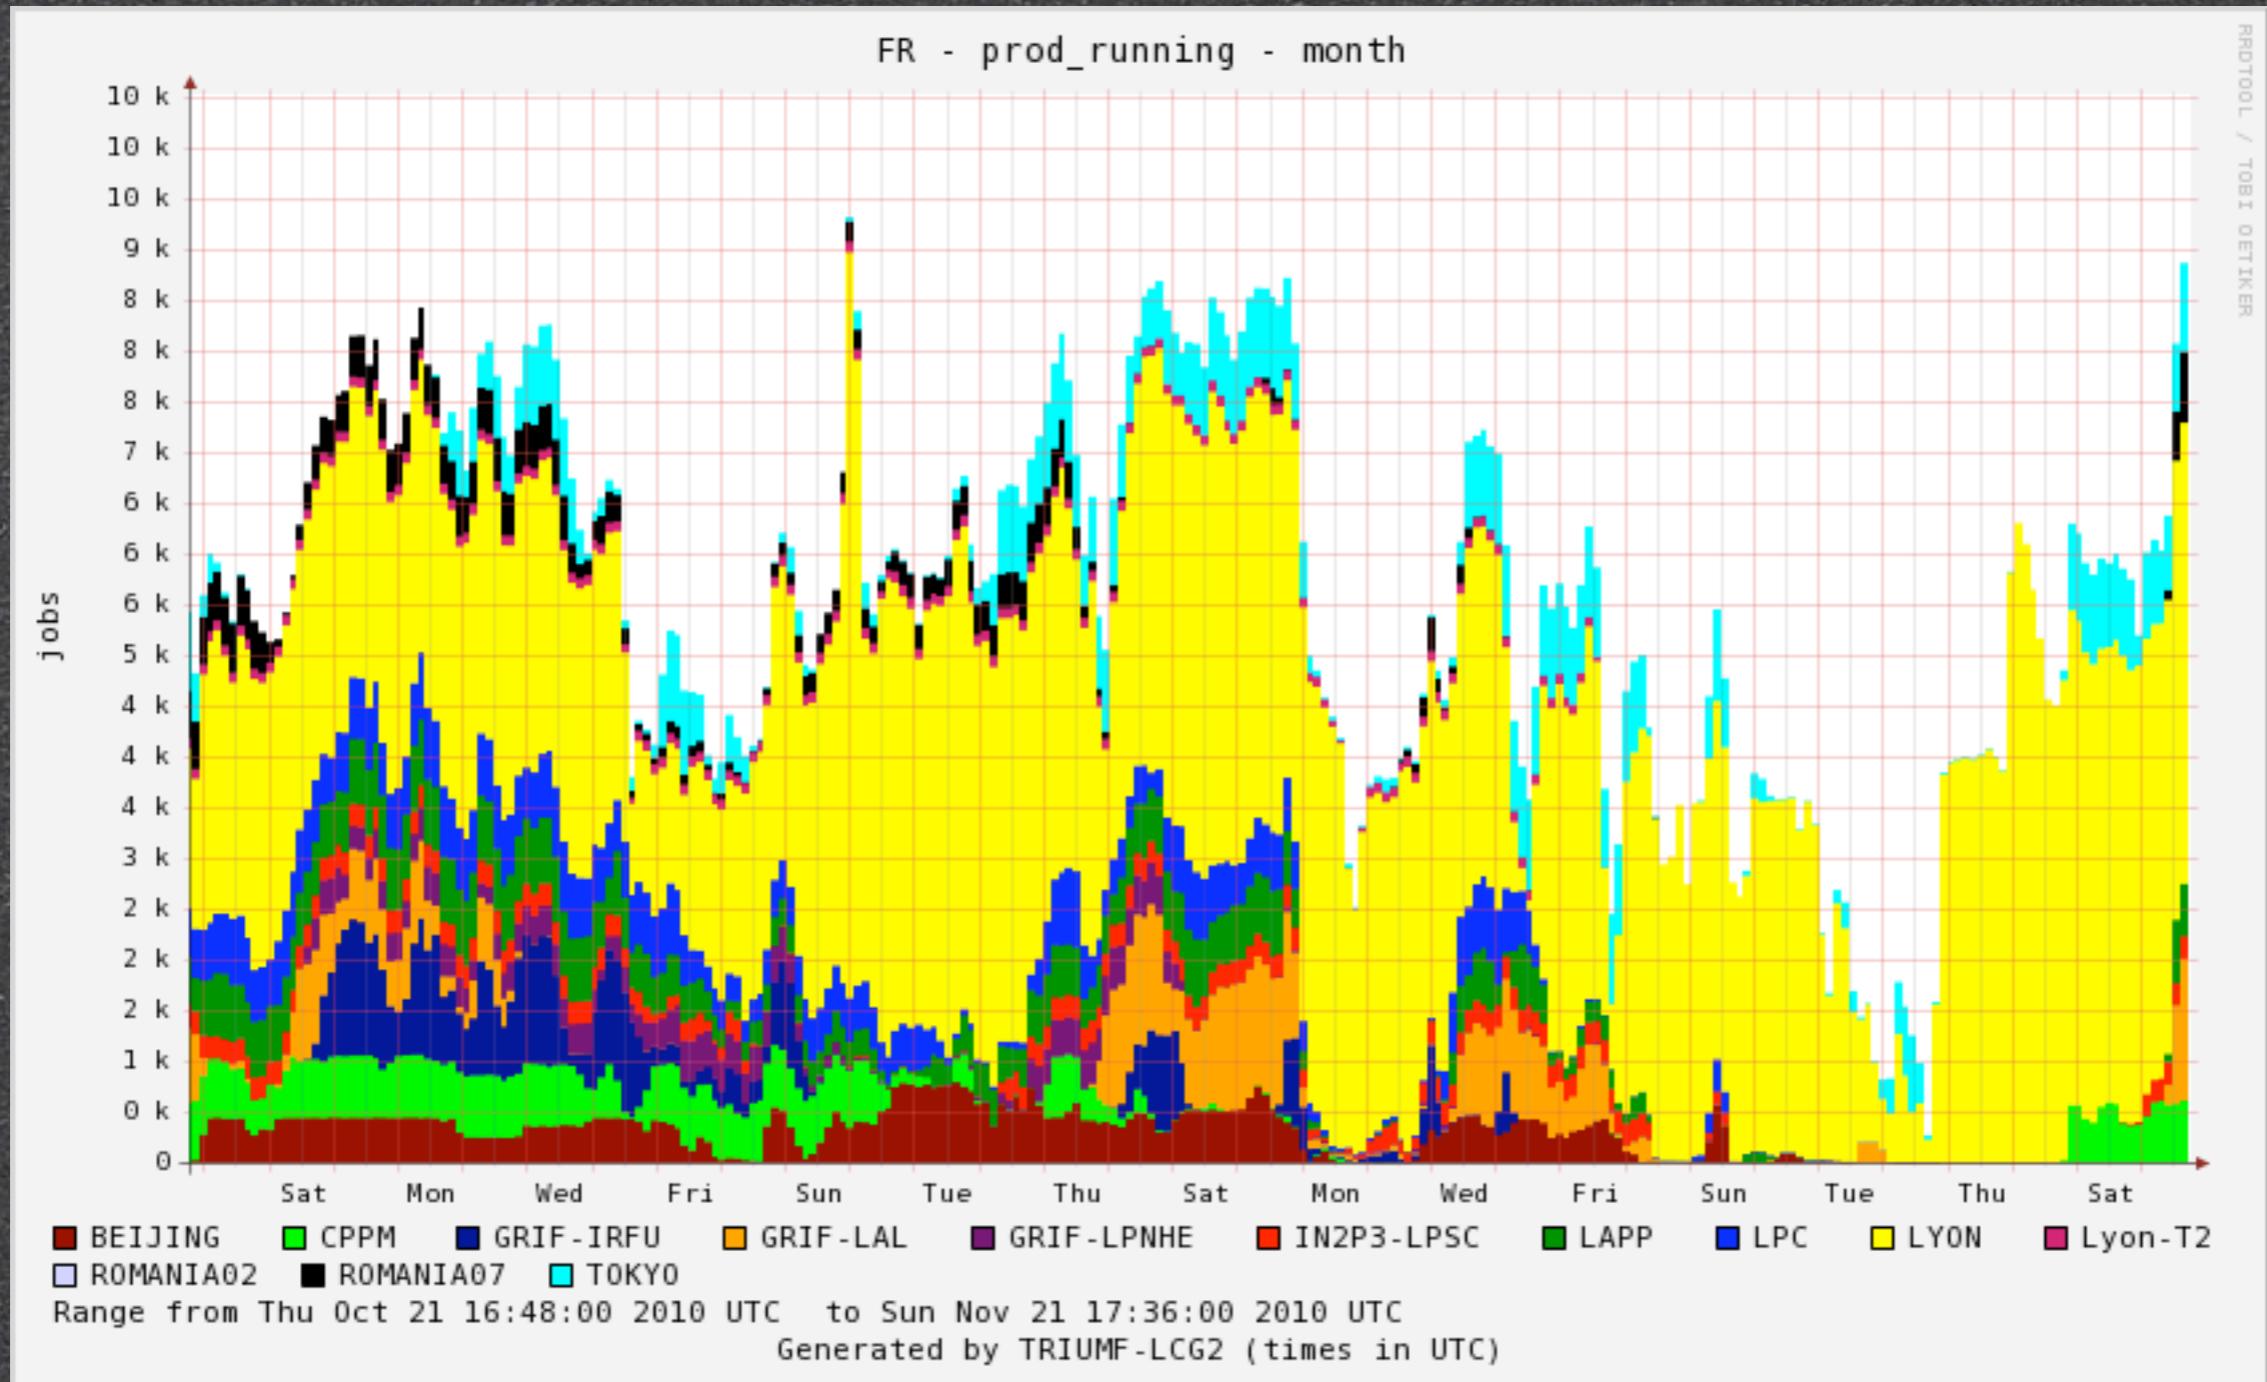

- 4 TeV
- 1400 bunches (50 ns)
- 2.5 micron emittance
- $1.5 \times 10^{11}$  protons/bunch
- $\beta^* = 2.0$  m, nominal crossing angle

Peak luminosity	$2.2 \times 10^{33}$
Integrated per day	$38 \text{ pb}^{-1}$
200 days	$7.6 \text{ fb}^{-1}$
Stored energy	134 MJ

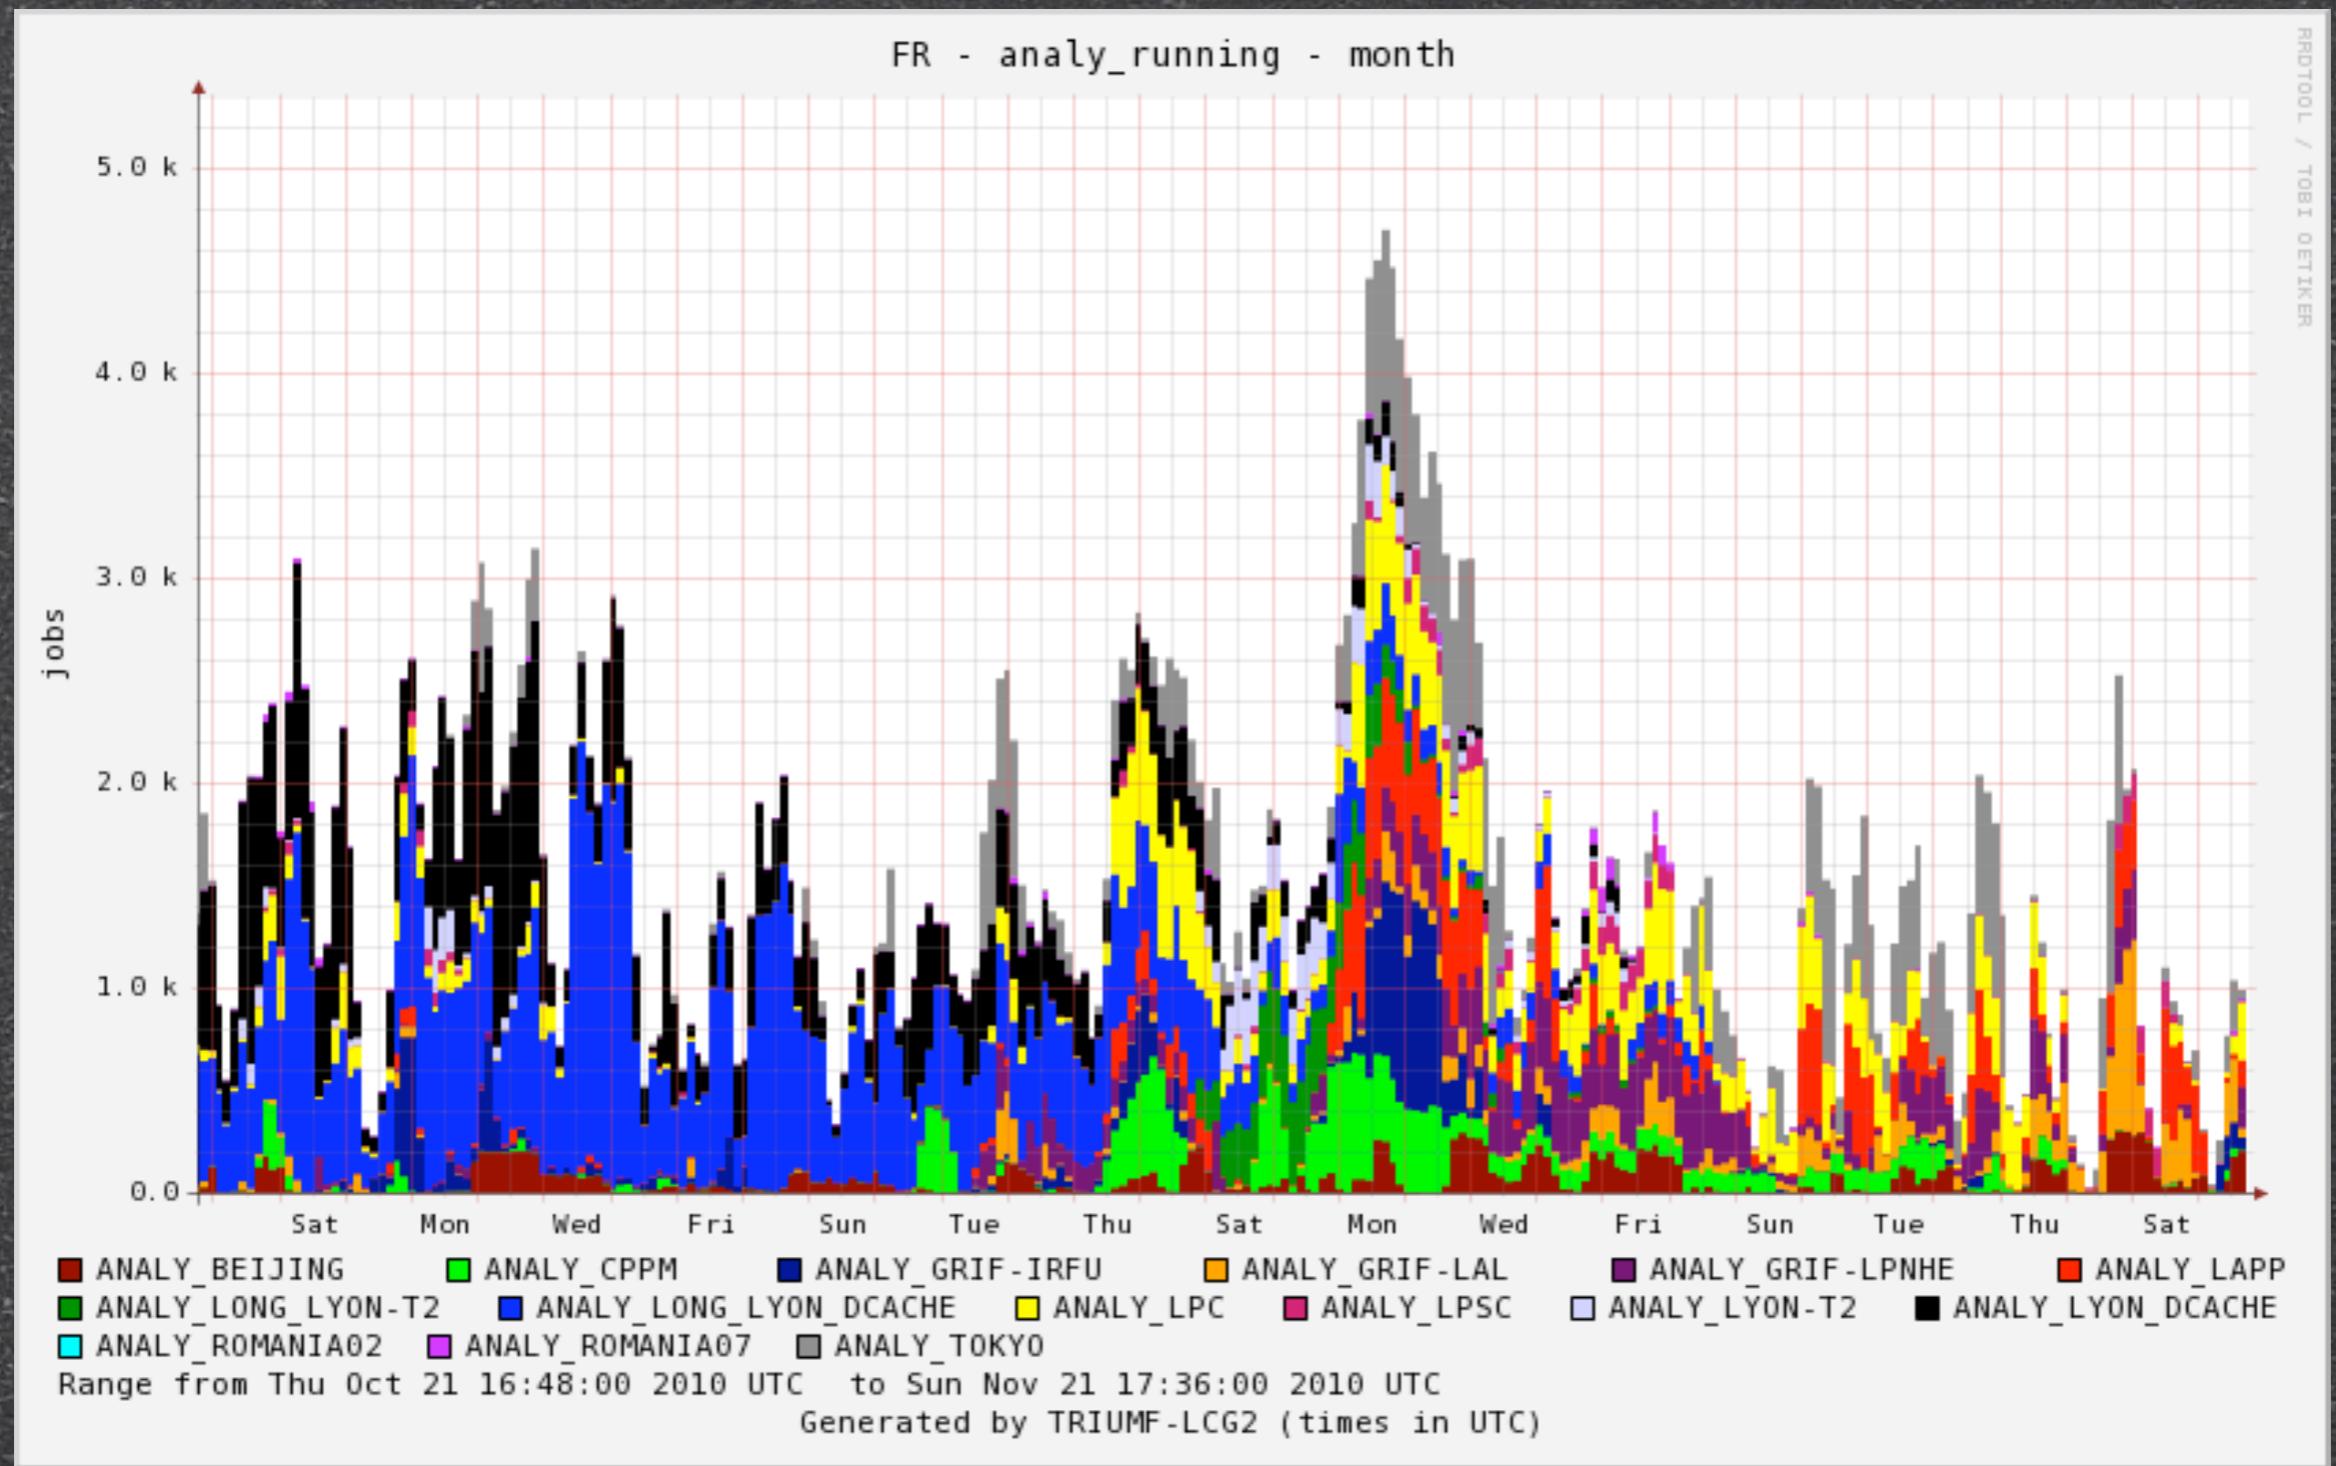

██████████ ooppss

*Usual warnings particularly apply – see problems, problems above*

And if LHC runs in  
2012 ?

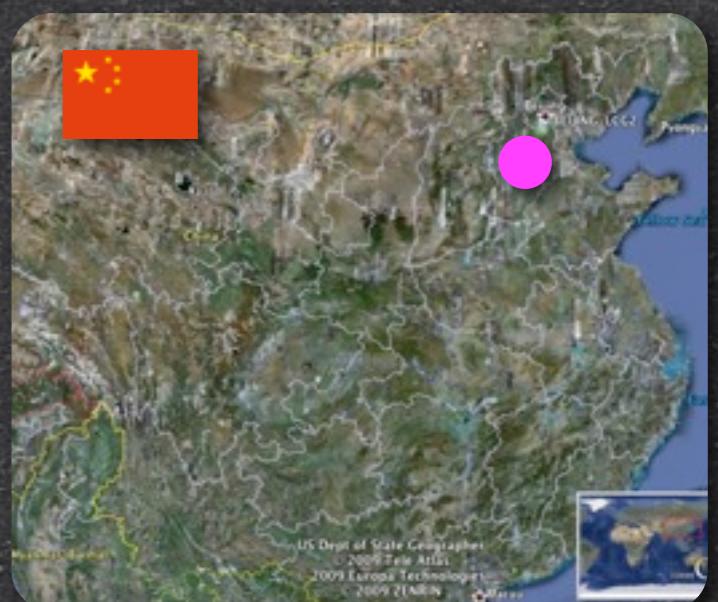

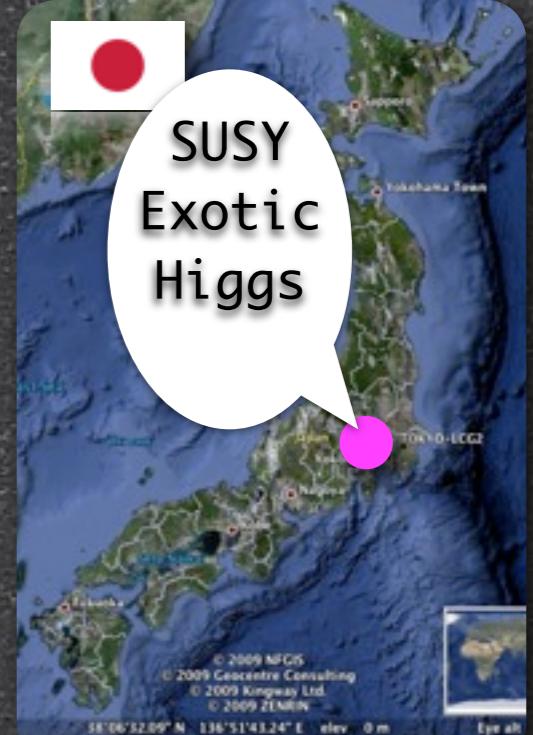

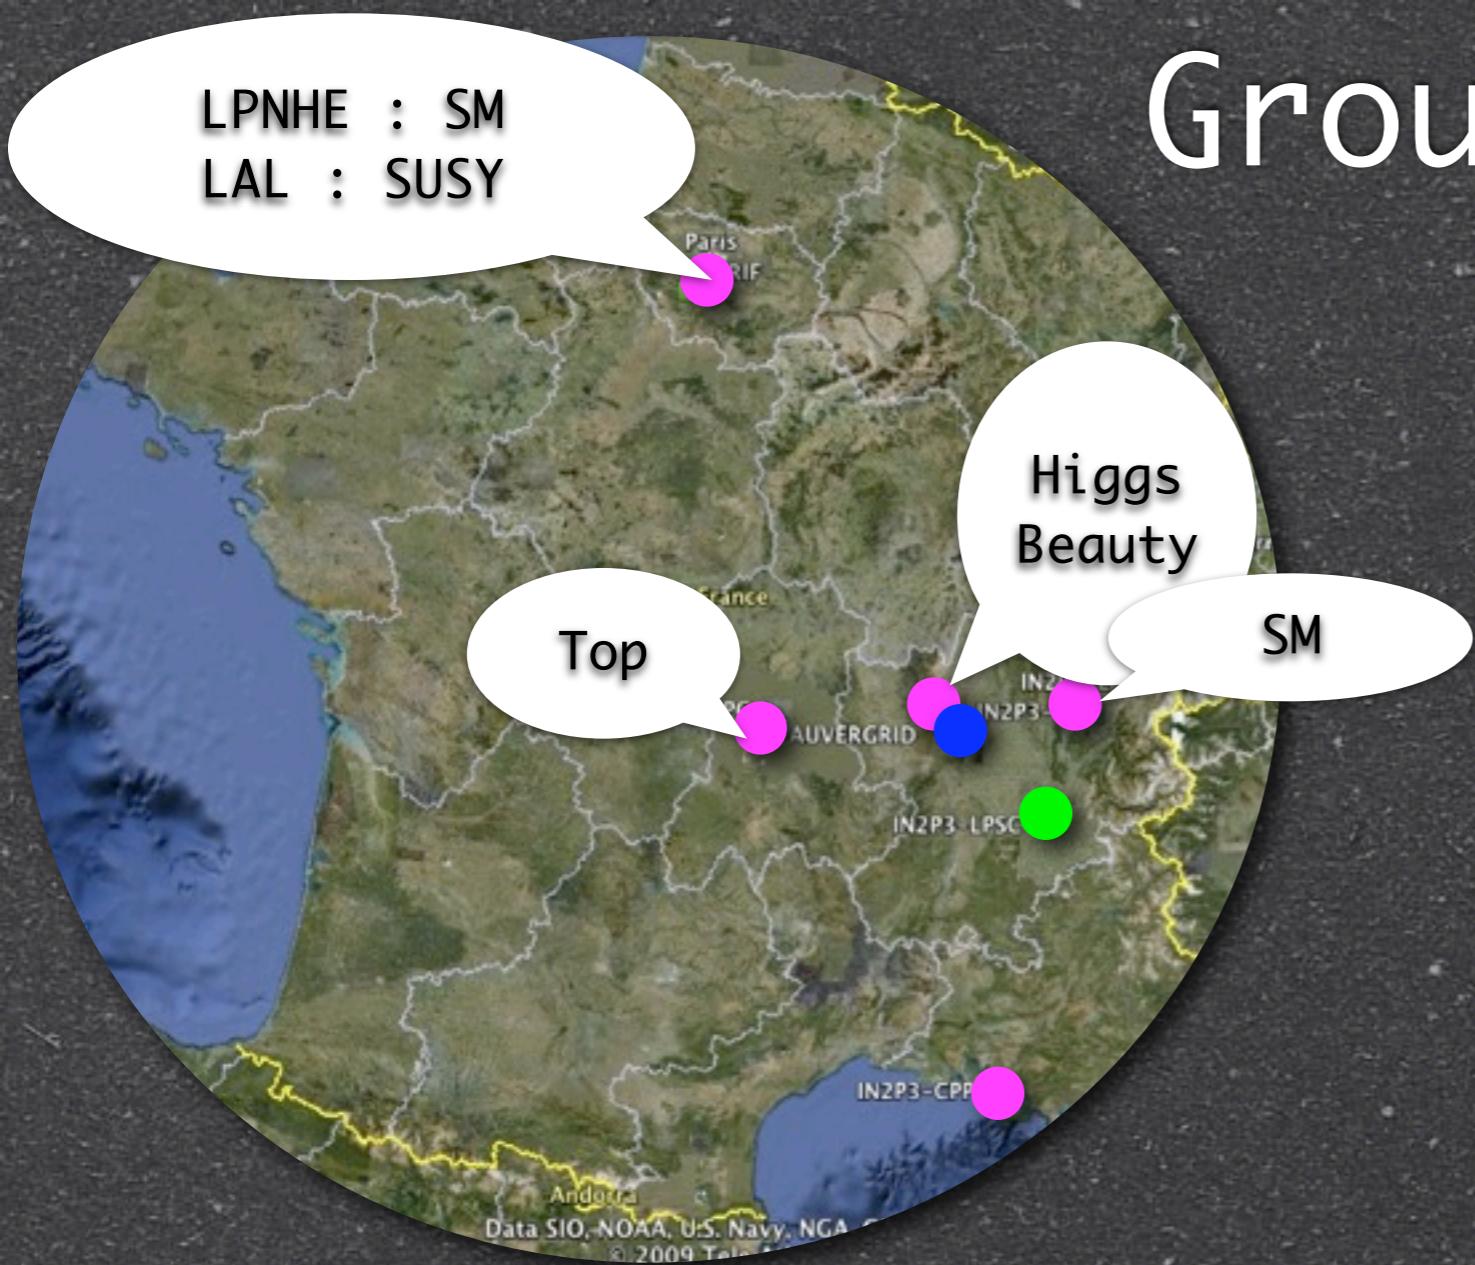

# Last month on FR

# GroupDisk : PHYS

LPNHE : SM  
LAL : SUSY

# 7 TeV data on DISK

## Status before summer...Rigid Pre-placement

- RAW : 1 copy over 9 T1s (lyon : 15 %)
- ESD : 2 copies over 9 T1s (BNL 100%, extra. is secondary)
- Lyon : 32%
- To T2s on some clouds (where no analysis at T1)
- AODs : 2 primary copies over T1s
  - Lyon 100%
  - GRID : 100%
  - Tokyo 100%
  - LAPP, LPC : 15%
  - R0, Beijing : 10%
- DESDs follow AODs but are secondaries

Secondaries : deleted if space is needed
