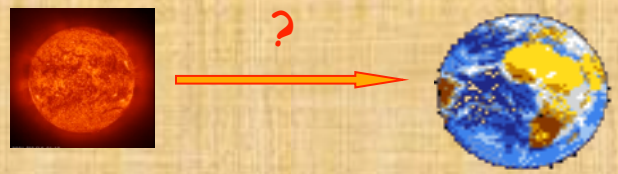
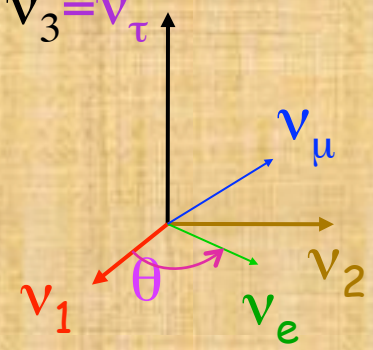
- CP violation effects in astrophysics and cosmology (BBN)

Neutrino Oscillations

B. Pontecorvo, 1957





mixing angle

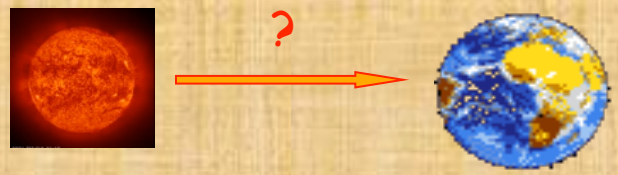
$$\begin{pmatrix} \nu_e \\ \nu_\mu \end{pmatrix} = \begin{pmatrix} \cos\theta & \sin\theta \\ -\sin\theta & \cos\theta \end{pmatrix} \begin{pmatrix} \nu_1 \\ \nu_2 \end{pmatrix}$$

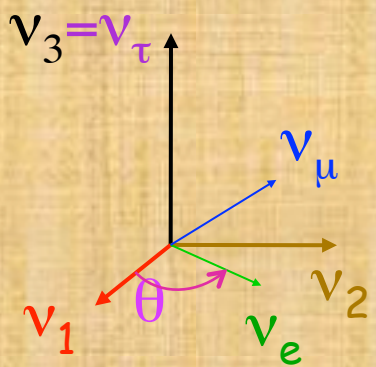
flavour basis — mass basis

$\Delta m^2 = m_2^2 - m_1^2$

Neutrino Oscillations

B. Pontecorvo, 1957





mixing angle

$$\begin{pmatrix} \nu_e \\ \nu_\mu \end{pmatrix} = \begin{pmatrix} \cos\theta & \sin\theta \\ -\sin\theta & \cos\theta \end{pmatrix} \begin{pmatrix} \nu_1 \\ \nu_2 \end{pmatrix}$$

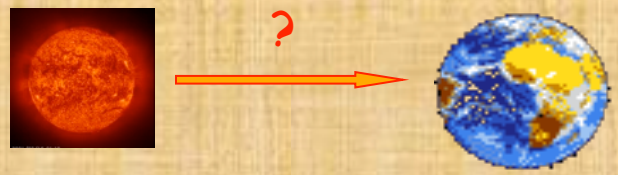
flavour basis — mass basis

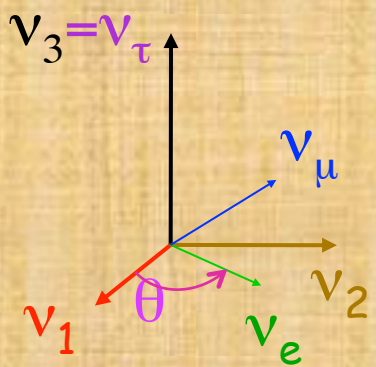
$\Delta m^2 = m_2^2 - m_1^2$

- The time evolution is : $|\nu_e(t)\rangle = \cos\theta \times e^{-iE_1 t}|\nu_1\rangle + \sin\theta e^{-iE_2 t}|\nu_2\rangle$

Neutrino Oscillations

B. Pontecorvo, 1957





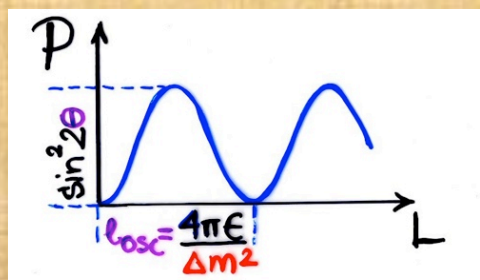
mixing angle

$$\begin{pmatrix} \nu_e \\ \nu_\mu \end{pmatrix} = \begin{pmatrix} \cos\theta & \sin\theta \\ -\sin\theta & \cos\theta \end{pmatrix} \begin{pmatrix} \nu_1 \\ \nu_2 \end{pmatrix} \qquad \Delta m^2 = m_2^2 - m_1^2$$

flavour basis — mass basis

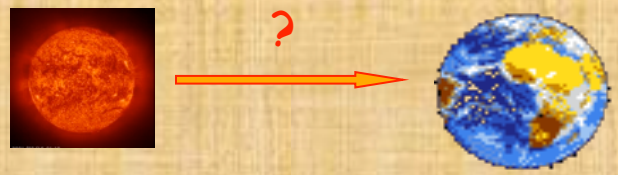
- The time evolution is : $|\nu_e(t)\rangle = \cos\theta \times e^{-iE_1 t}|\nu_1\rangle + \sin\theta e^{-iE_2 t}|\nu_2\rangle$

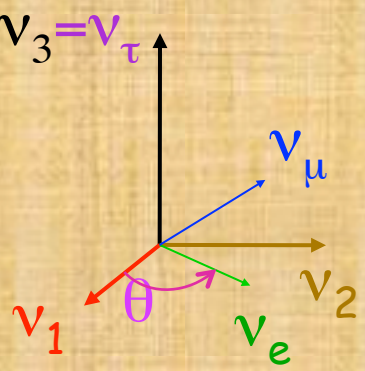
- $P(\nu_e \to \nu_\mu) = \sin^2 2\theta \sin^2\left(\frac{L}{4E}\Delta m^2\right)$ probability for neutrino oscillations



Neutrino Oscillations

B. Pontecorvo, 1957





mixing angle

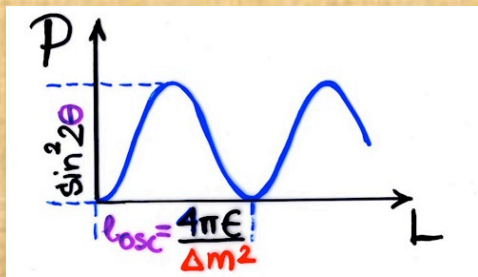
$$\begin{pmatrix} \nu_e \\ \nu_\mu \end{pmatrix} = \begin{pmatrix} \cos\theta & \sin\theta \\ -\sin\theta & \cos\theta \end{pmatrix} \begin{pmatrix} \nu_1 \\ \nu_2 \end{pmatrix}$$

flavour basis — mass basis

$\Delta m^2 = m_2^2 - m_1^2$

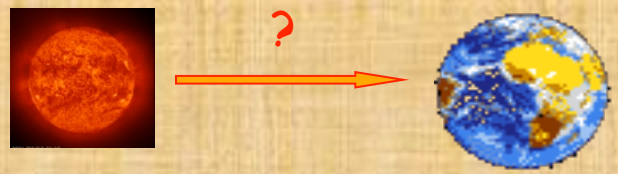
$$P(\nu_e \to \nu_\mu) = \sin^2 2\theta \sin^2\left(\frac{L}{4E}\Delta m^2\right)$$

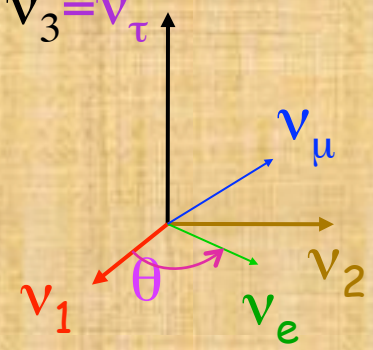
probability for neutrino oscillations



Neutrino Oscillations

B. Pontecorvo, 1957





mixing angle

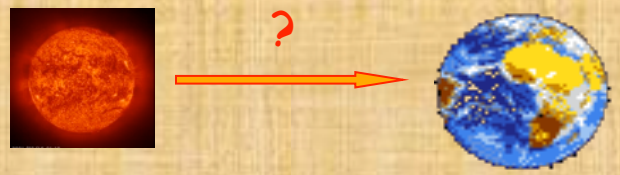
$$\begin{pmatrix} \nu_e \\ \nu_\mu \end{pmatrix} = \begin{pmatrix} \cos\theta & \sin\theta \\ -\sin\theta & \cos\theta \end{pmatrix} \begin{pmatrix} \nu_1 \\ \nu_2 \end{pmatrix}$$

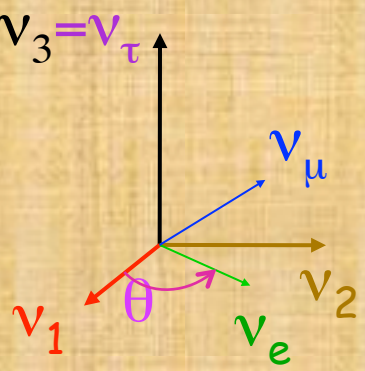
flavour basis — mass basis

$\Delta m^2 = m_2^2 - m_1^2$

Neutrino Oscillations

B. Pontecorvo, 1957





$$\begin{pmatrix} \nu_e \\ \nu_\mu \end{pmatrix} = \begin{pmatrix} \cos\theta & \sin\theta \\ -\sin\theta & \cos\theta \end{pmatrix} \begin{pmatrix} \nu_1 \\ \nu_2 \end{pmatrix}$$

mixing angle

flavour basis

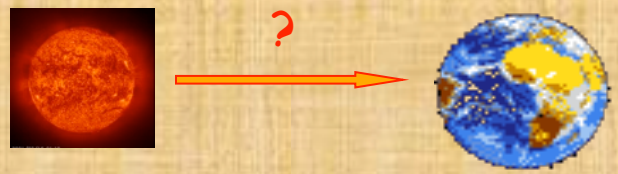
mass basis

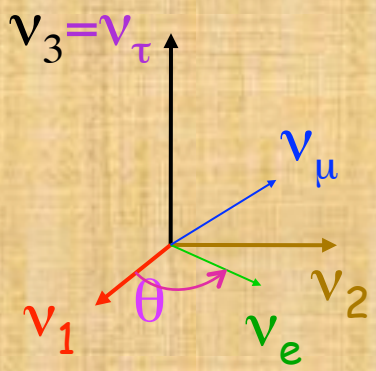
$\Delta m^2 = m_2^2 - m_1^2$

THE OSCILLATION PHENOMENON ESTABLISHED.

Neutrino Oscillations

B. Pontecorvo, 1957





mixing angle

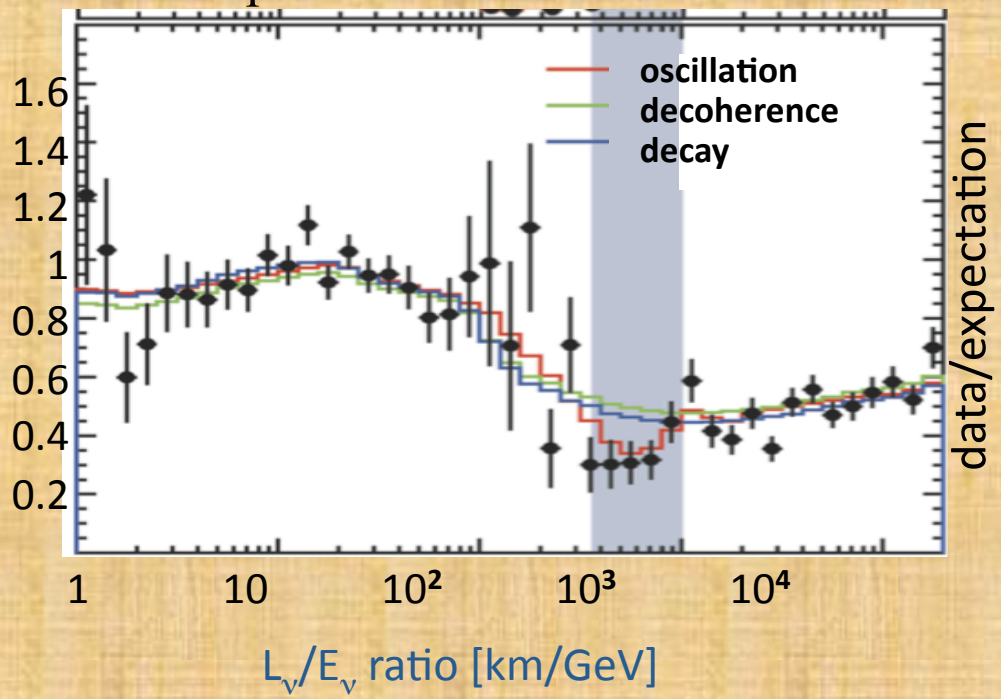
$$\begin{pmatrix} \nu_e \\ \nu_\mu \end{pmatrix} = \begin{pmatrix} \cos\theta & \sin\theta \\ -\sin\theta & \cos\theta \end{pmatrix} \begin{pmatrix} \nu_1 \\ \nu_2 \end{pmatrix}$$

flavour basis — mass basis

$\Delta m^2 = m_2^2 - m_1^2$

THE OSCILLATION PHENOMENON ESTABLISHED.

Super-Kamiokande results .



Neutrino properties : where we stand

Neutrino properties : where we stand

- In three flavours : $\nu_\alpha = U_{MNSP}\ \nu_i$ with α =e,μ,τ i =1,2,3 .

Neutrino properties : where we stand

- In three flavours : $\nu_\alpha = U_{MNSP}\ \nu_i$ with α =e,μ,τ i =1,2,3 .
- The mixing matrix depends upon :

  3 mixing angles, 1 CP Dirac phase, 2 Majorana phases

θ_{12}		$sin^2 2\theta_{12} = 0.86^{+0.03}_{-0.04}$	(SNO, Kamland)
θ_{23}		$sin^2 2\theta_{23} > 0.92$	(Super-Kamiokande, K2K, MINOS, …OPERA)
θ_{13}	?	$sin^2 2\theta_{13} < 0.19$	(CHOOZ,..., soon Double-CHOOZ, RENO, Daya-Bay, T2K, NOνA…)

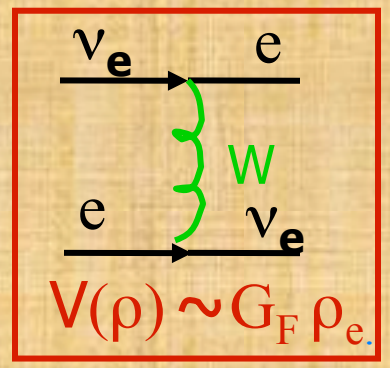
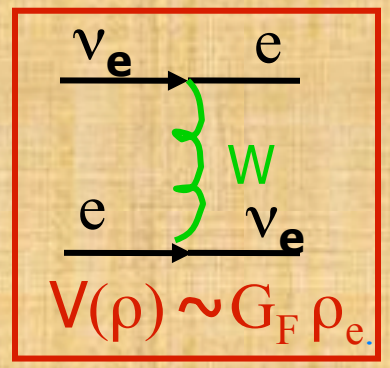
The Mikheev-Smirnov-Wolfenstein effect



The Mikheev-Smirnov-Wolfenstein (MSW) effect ('78, '86) : neutrino coupling with matter induces a resonant flavour conversion.

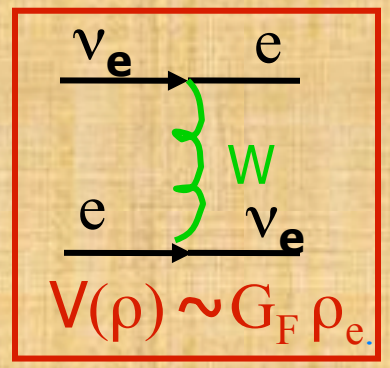
The Mikheev-Smirnov-Wolfenstein effect



The Mikheev-Smirnov-Wolfenstein (MSW) effect ('78, '86) : neutrino coupling with matter induces a resonant flavour conversion.

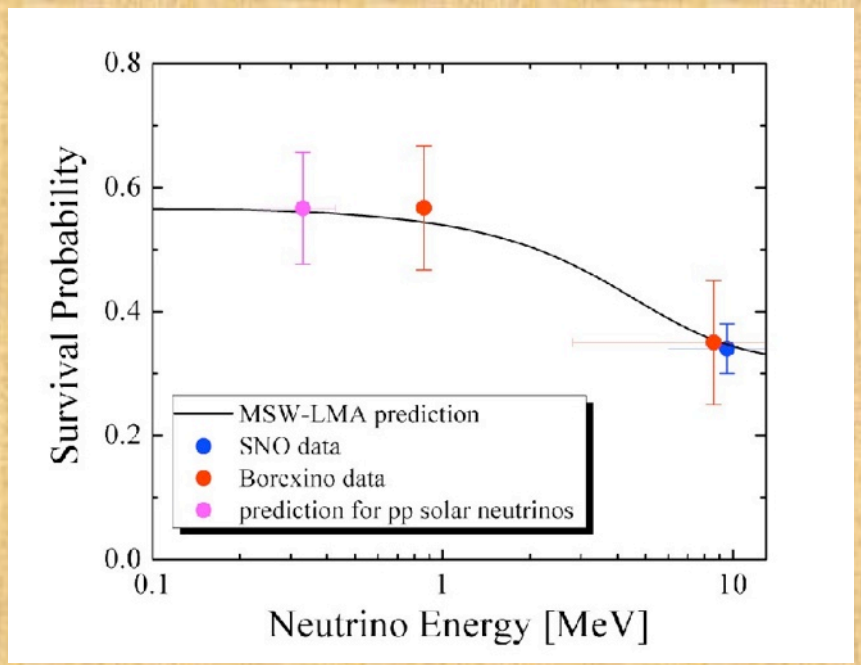
The flavour conversion depends on the adiabaticity of the propagation at the resonance (density profile and mixing parameters).

The Mikheev-Smirnov-Wolfenstein effect



The Mikheev-Smirnov-Wolfenstein (MSW) effect ('78, '86) : neutrino coupling with matter induces a resonant flavour conversion.

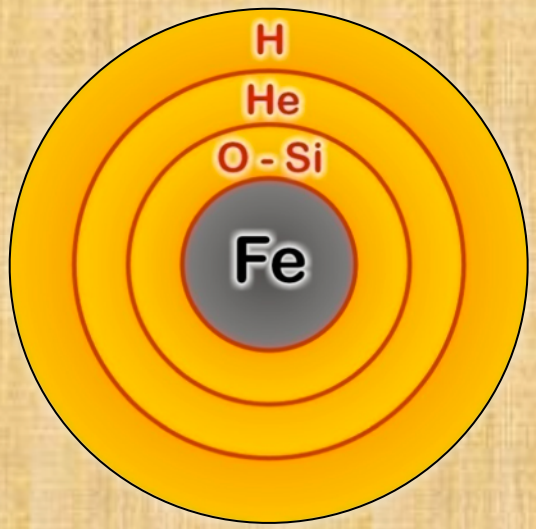
The flavour conversion depends on the adiabaticity of the propagation at the resonance (density profile and mixing parameters).



the beautiful explanation of the « solar neutrino deficit » problem !

Borexino Collaboration, J. Conf. Ser. 202, 012028 (2010)

Core-collapse supernovae (SN)



99 % of the energy is emitted as neutrinos of all flavours in a short burst of about 10 s.

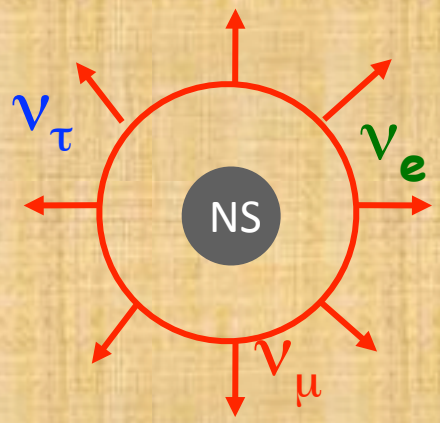
Core-collapse supernovae (SN)

99 % of the energy is emitted as neutrinos of all flavours in a short burst of about 10 s.

Core-collapse supernovae (SN)

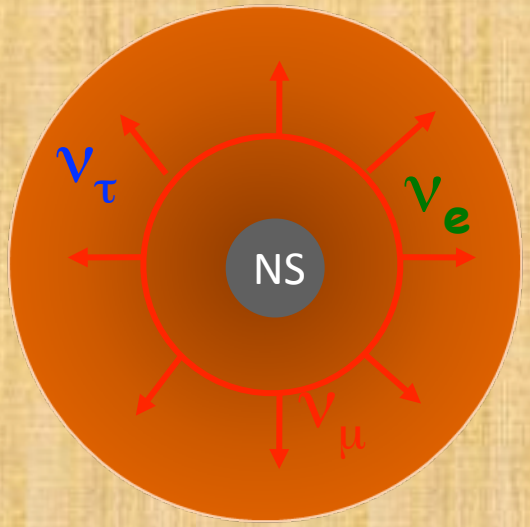
99 % of the energy is emitted as neutrinos of all flavours in a short burst of about 10 s.

Core-collapse supernovae (SN)



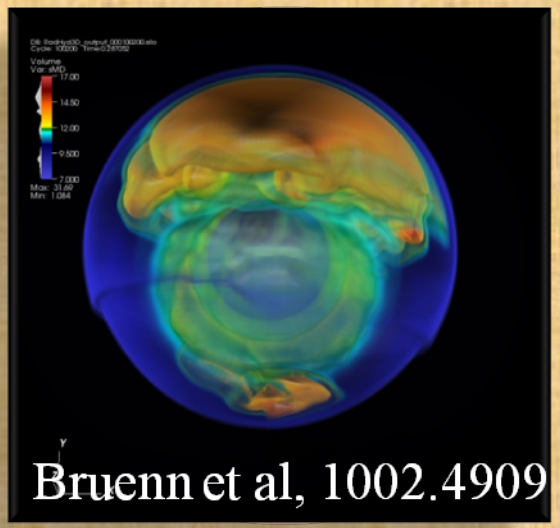
99 % of the energy is emitted as neutrinos of all flavours in a short burst of about 10 s.

Core-collapse supernovae (SN)



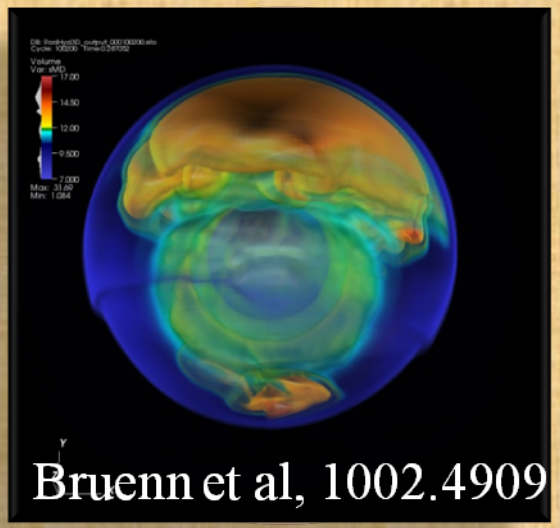
99 % of the energy is emitted as neutrinos of all flavours in a short burst of about 10 s.

Core-collapse supernovae (SN)



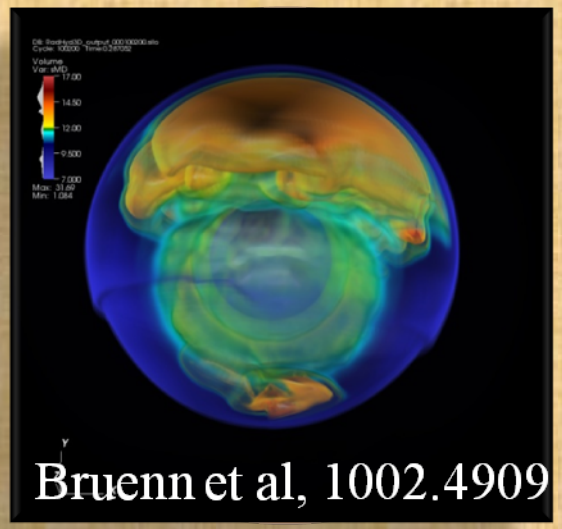
99 % of the energy is emitted as neutrinos of all flavours in a short burst of about 10 s.

Core-collapse supernovae (SN)



SN simulations have reached a high degree of complexity - 2D-3D, SASI, realistic nuclear networks and neutrino transport. The supernova explosion mechanism is being delineated for various progenitor masses.

Core-collapse supernovae (SN)



SN simulations have reached a high degree of complexity - 2D-3D, SASI, realistic nuclear networks and neutrino transport. The supernova explosion mechanism is being delineated for various progenitor masses.

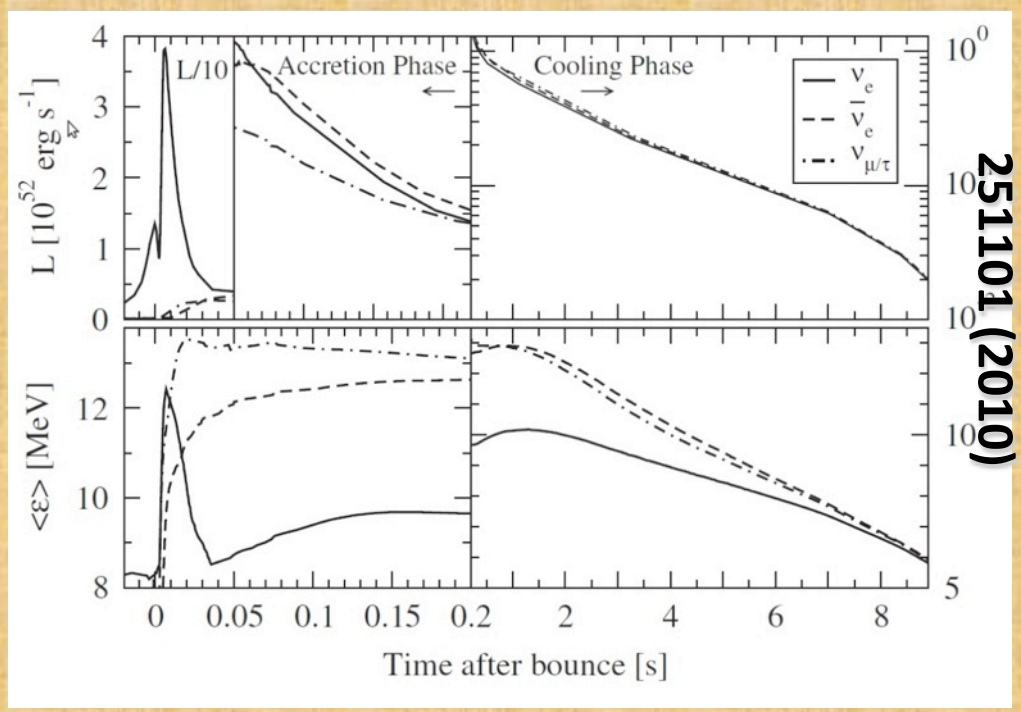
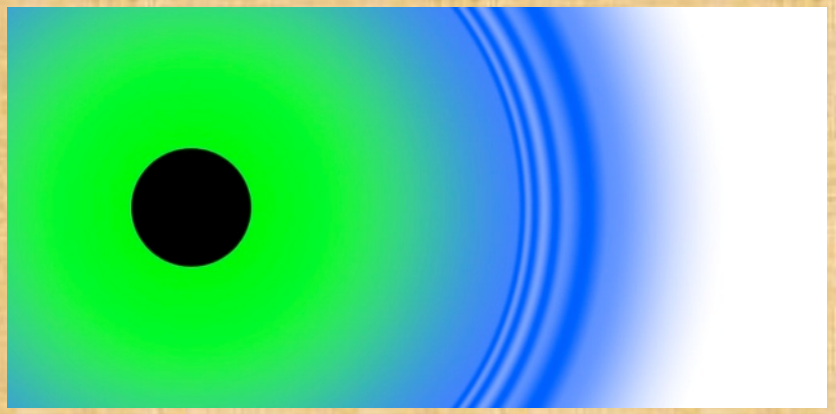
FUTURE OBSERVATIONS IMPORTANT !



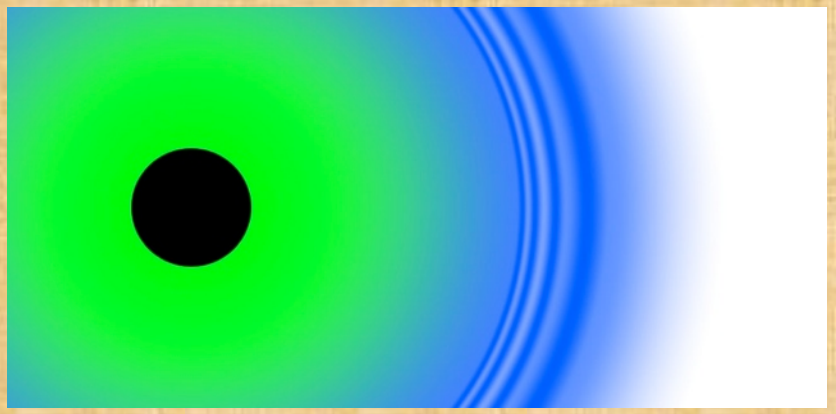
Hüdepohl *et al.* PRL 104, 251101 (2010)

Neutrinos follow closely the explosion.

Neutrino flavour conversion in SN

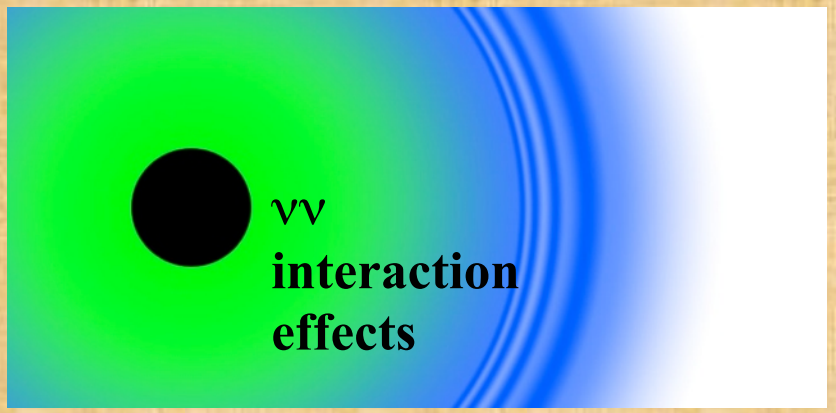


Neutrino flavour conversion in SN



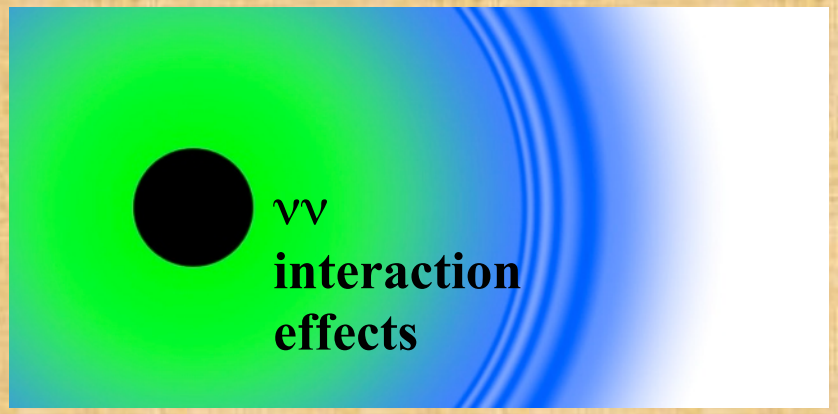
Neutrino-neutrino interaction is important :
Collective phenomena emerge.

Neutrino flavour conversion in SN



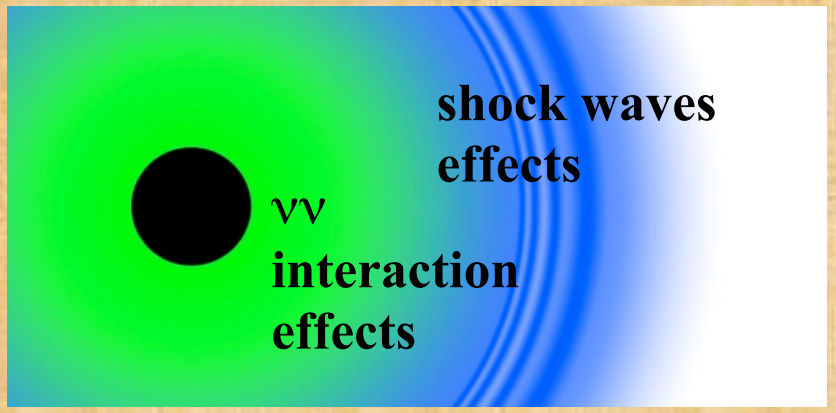
Neutrino-neutrino interaction is important :
Collective phenomena emerge.

Neutrino flavour conversion in SN



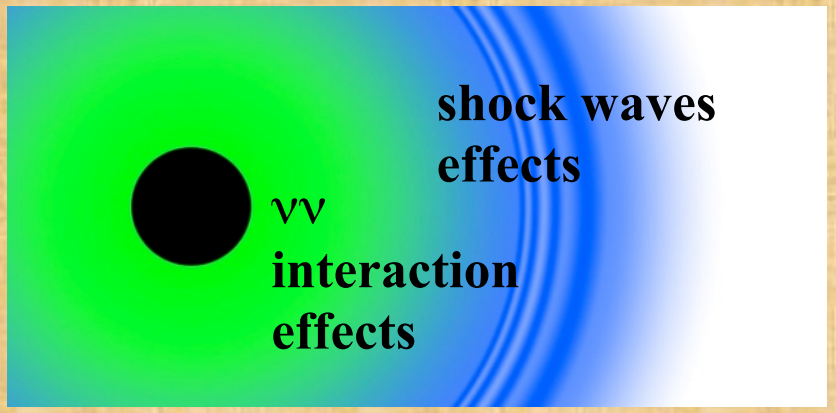
- Neutrino-neutrino interaction is important : Collective phenomena emerge.
- Temporally evolving density profiles with shock waves imply: Multiple resonances and phase effects appear.

Neutrino flavour conversion in SN



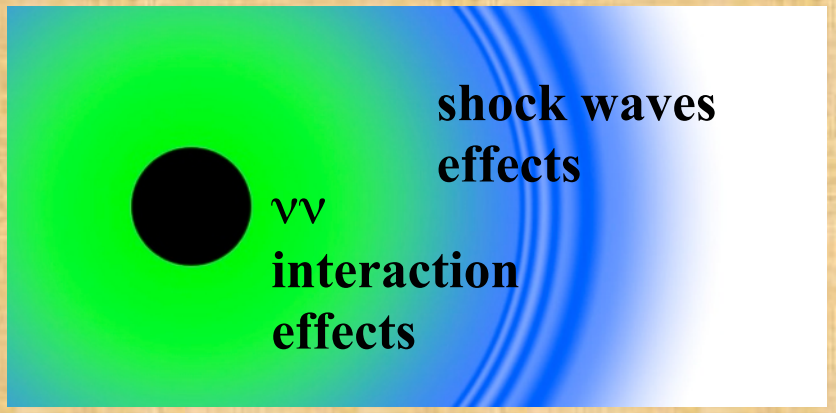
- Neutrino-neutrino interaction is important : Collective phenomena emerge.
- Temporally evolving density profiles with shock waves imply: Multiple resonances and phase effects appear.

Neutrino flavour conversion in SN



- Neutrino-neutrino interaction is important :
  Collective phenomena emerge.
- Temporally evolving density profiles with shock waves imply:
  Multiple resonances and phase effects appear.
- Turbulence effects:
  New effects in the non-resonant channel.

Neutrino flavour conversion in SN



- Neutrino-neutrino interaction is important :
  Collective phenomena emerge.
- Temporally evolving density profiles with shock waves imply:
  Multiple resonances and phase effects appear.
- Turbulence effects:
  New effects in the non-resonant channel.

NEW FLAVOUR CONVERSION PHENOMENA EMERGE.

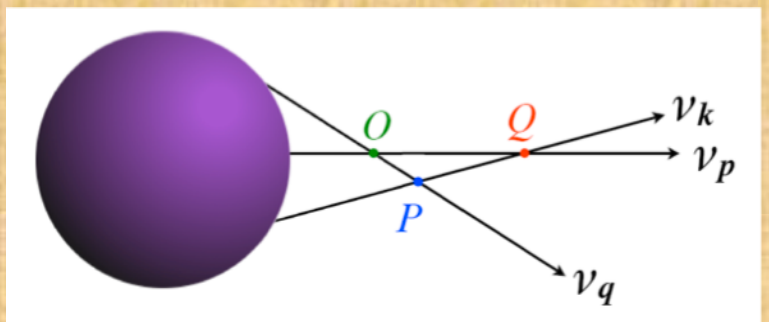
The ν–ν interaction

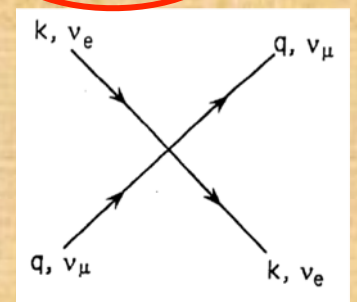
J. Pantaleone, PLB 287 (1992), Samuel,PRD 48 (1993), Sigl and Raffelt, NPB 406 (1993),

- Important progress since 2006 : Duan,Fuller,Qian PRD74 (2006

  the inclusion of the neutrino-neutrino interaction modifies signficantly the neutrino propagation in matter.

  H = Hvacuum + Hmatter + Hνν (ρ_ν)





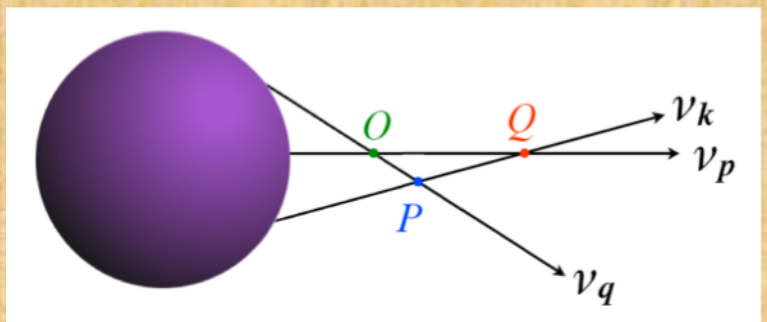
The ν–ν interaction

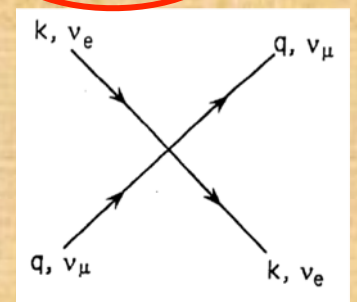
J. Pantaleone, PLB 287 (1992), Samuel,PRD 48 (1993), Sigl and Raffelt, NPB 406 (1993),

- Important progress since 2006 : Duan,Fuller,Qian PRD74 (2006

  the inclusion of the neutrino-neutrino interaction modifies signficantly the neutrino propagation in matter.

  H = Hvacuum + Hmatter + Hνν (ρ_ν)





- Involved numerically : large number of coupled stiff non-linear equations.

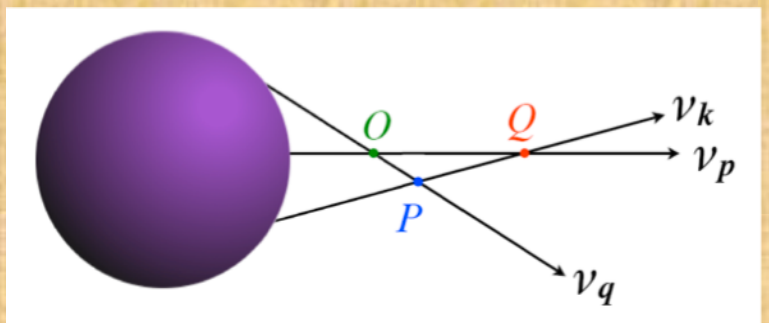
The ν–ν interaction

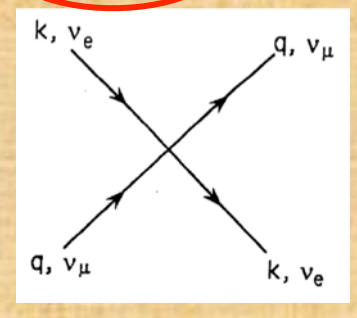
J. Pantaleone, PLB 287 (1992), Samuel,PRD 48 (1993), Sigl and Raffelt, NPB 406 (1993),

- Important progress since 2006 : Duan,Fuller,Qian PRD74 (2006

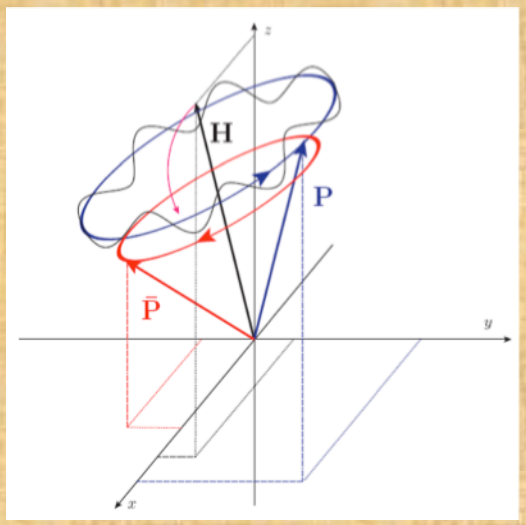
  the inclusion of the neutrino-neutrino interaction modifies signficantly the neutrino propagation in matter.

  $H = H_{vacuum} + H_{matter} + H_{\nu\nu}(\rho_\nu)$





- Involved numerically : large number of coupled stiff non-linear equations.

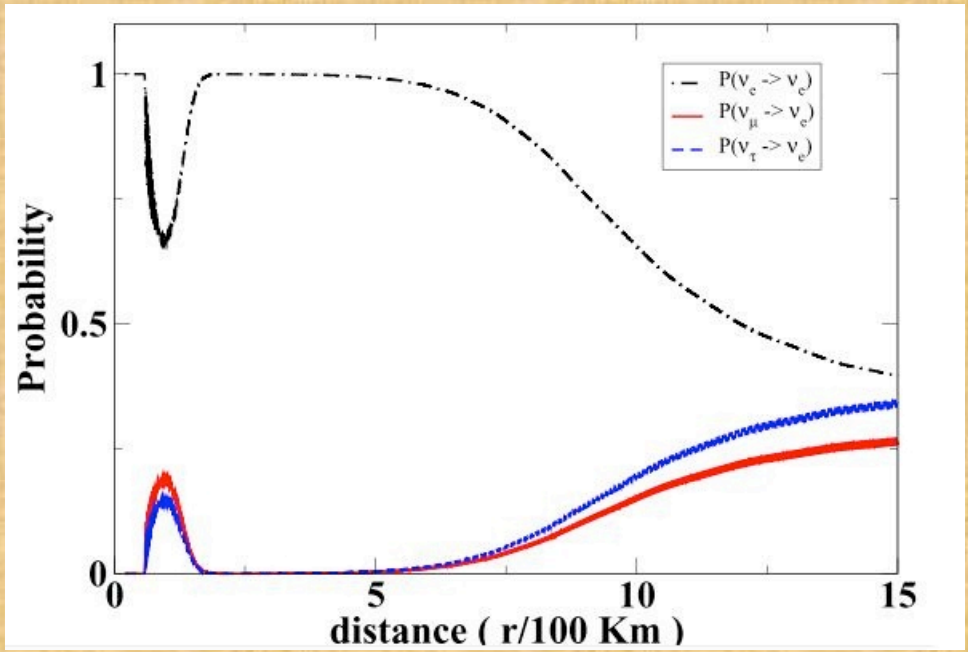


- Three regimes are identified :
  - -The synchronization regime
  - -The bipolar oscillations
  - - The spectral split

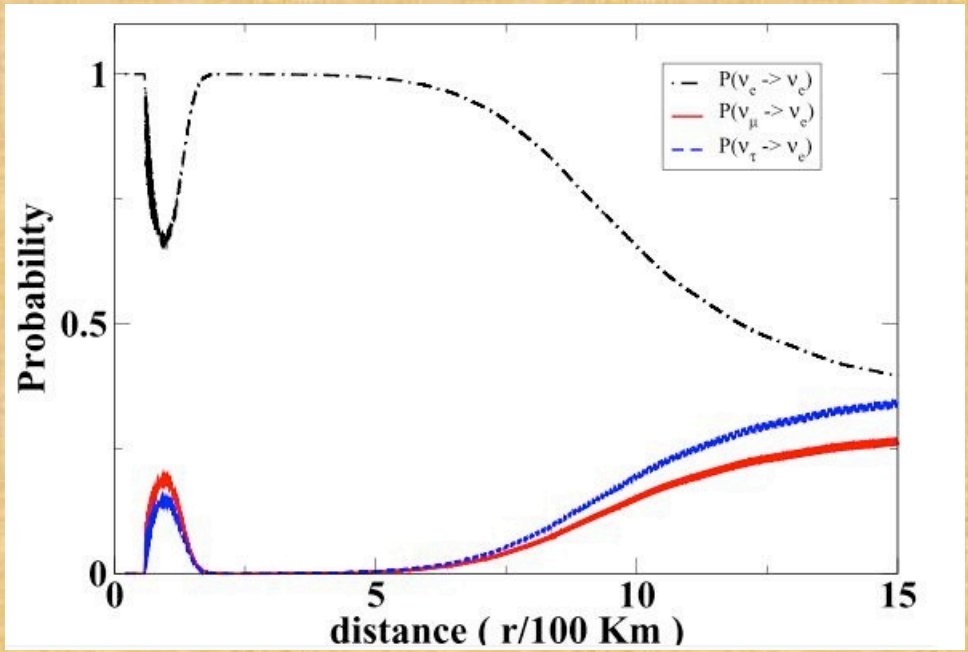
  Duan,Fuller,Qian PRD74 (2006), PRL 97 (2006), Hannestad, Raffelt, Sigl, Wong, PRD 74 (2006), Raffelt,Smirnov, PRD 76 (2007)

Important modifications of ν-fluxes

Important modifications of ν-fluxes



Important modifications of ν-fluxes



J. Gava and C.Volpe. PRD 78, 083007 (2008)

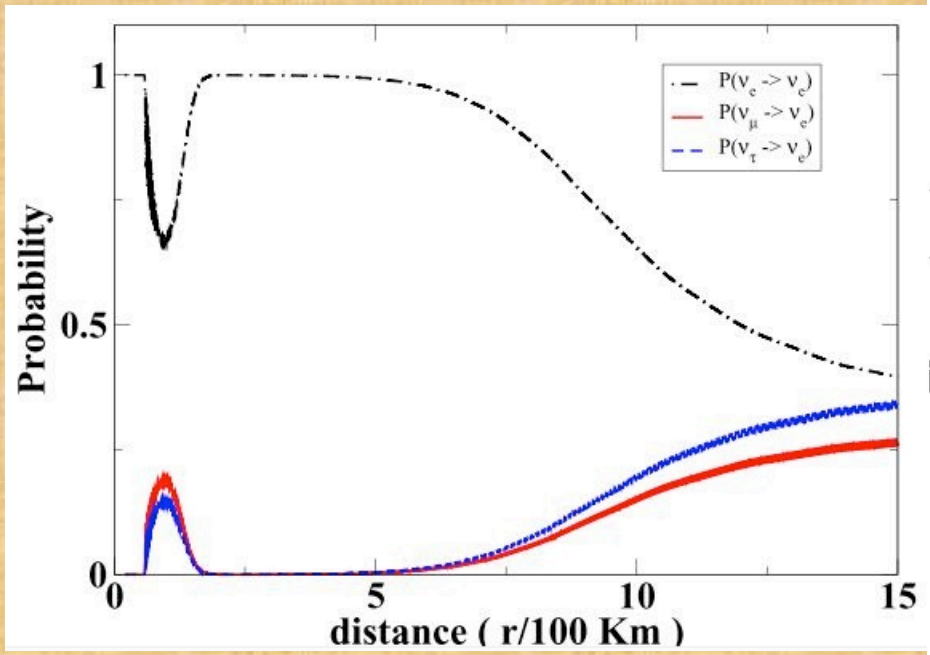
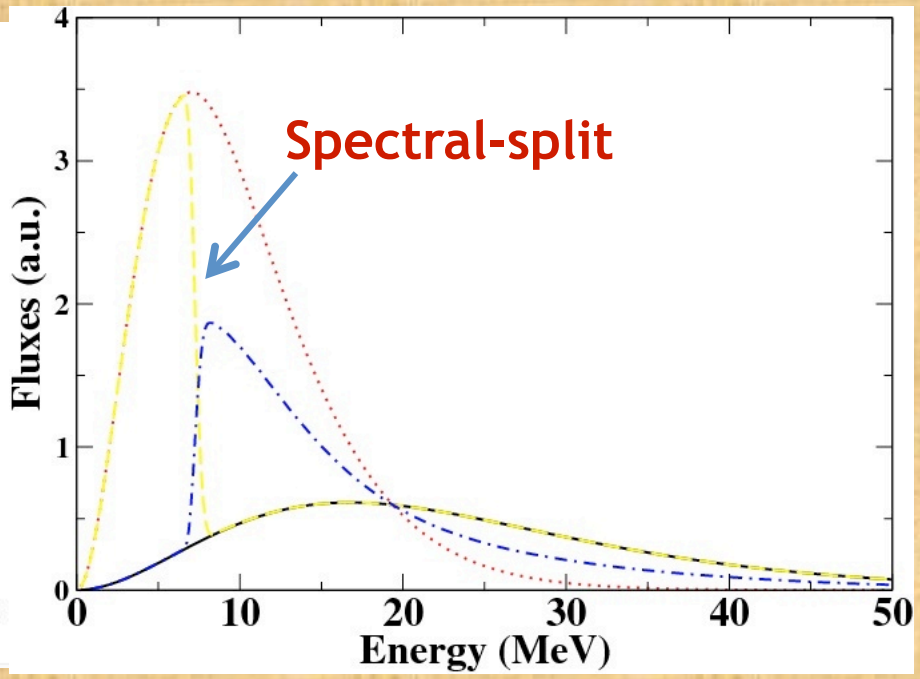
Many aspects have been unravelled in few years.
Open questions remain, e.g. the spectral split phenomenon?

Important modifications of ν-fluxes





J. Gava and C.Volpe. PRD 78, 083007 (2008)

Many aspects have been unravelled in few years.
Open questions remain, e.g. the spectral split phenomenon?

We have discovered that the spectral split is similar to a magnetic resonance phenomenon! ***See S. Galais' talk.***

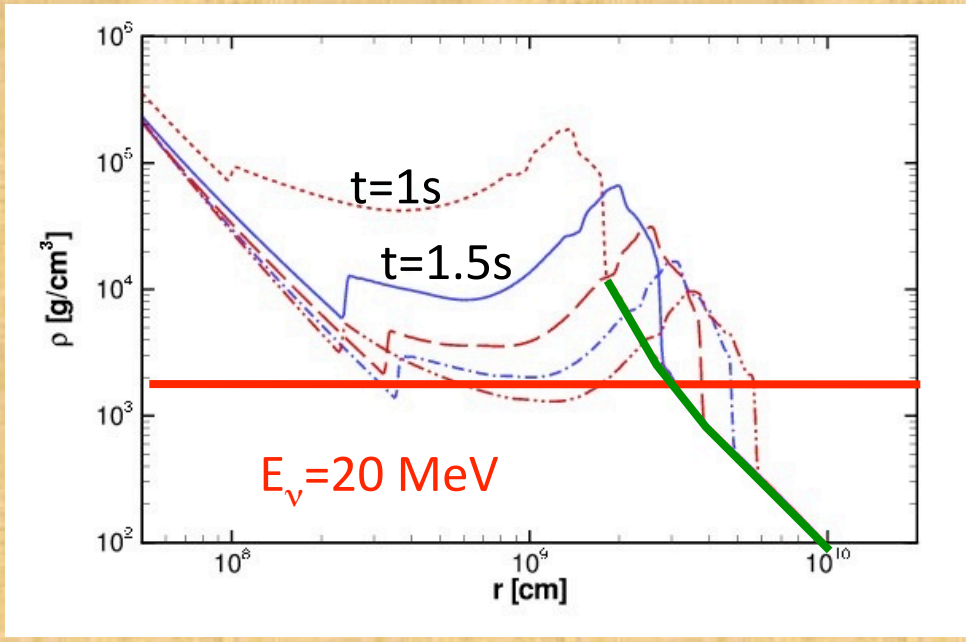
S. Galais and C.Volpe. in preparation.

The shock wave effects

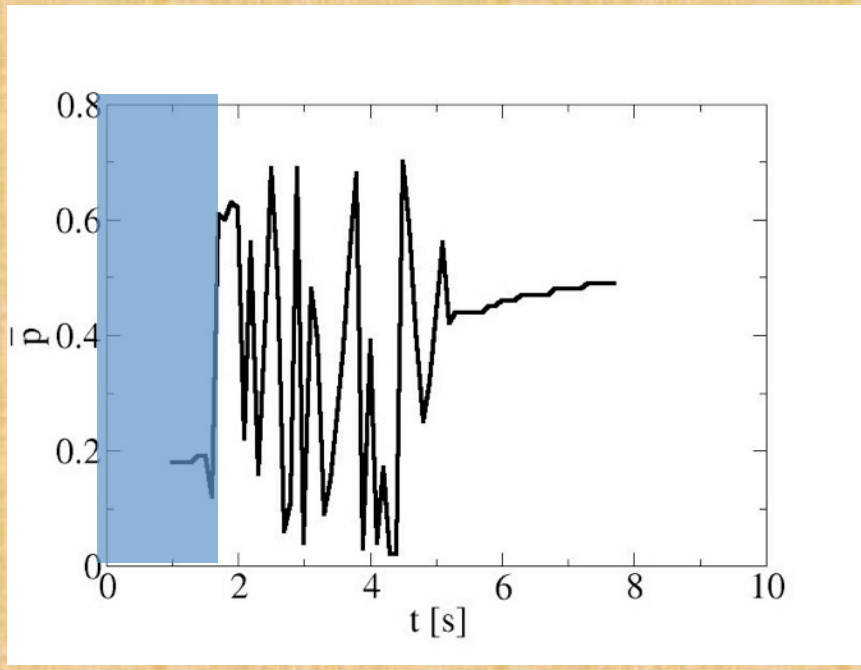
Schirato and Fuller (2002), arXiv : 0205390.

Neutrino evolution for a density profile including shoch waves

1. Before the shock (adiabatic ν propagation).



J. P. Kneller, G. C. McLaughlin, J. Brockman, PRD 77, 045023 (2008).



A simple analytical model proposed (it follows full numerical calculations at few % level).

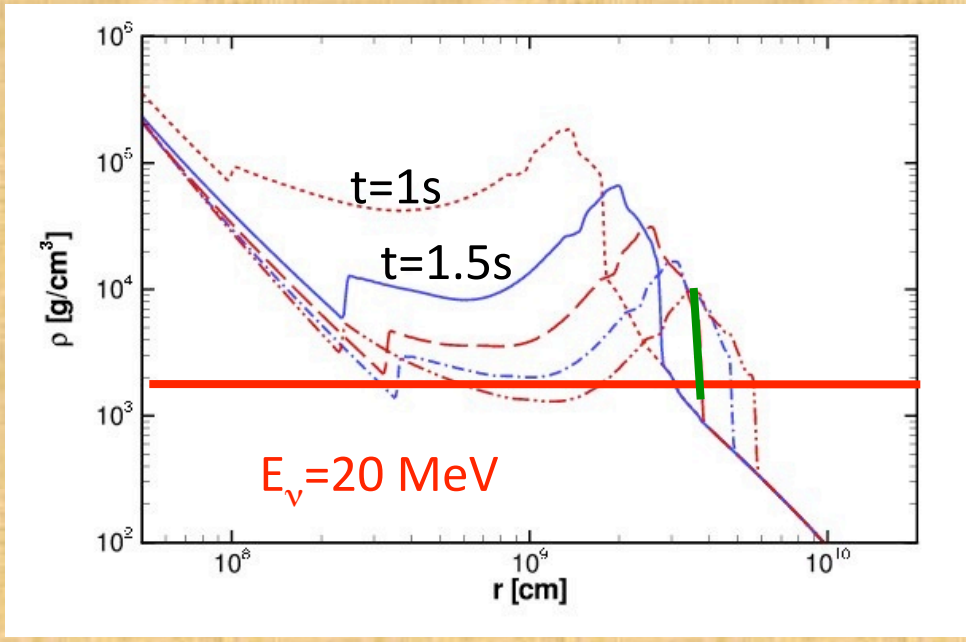
S. Galais et al., PRD 81 (2010) 053002, arXiv :0906.5294.

The shock wave effects

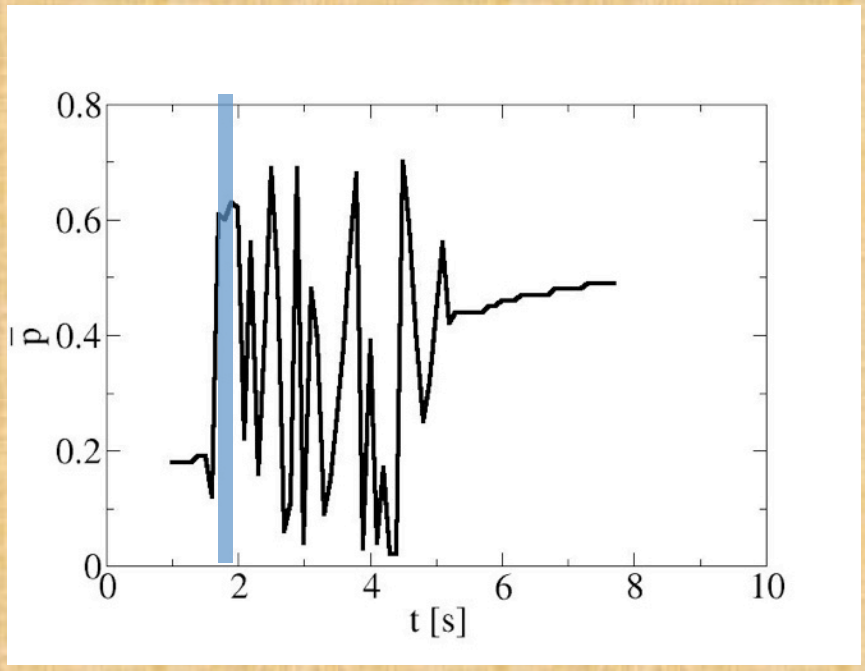
Schirato and Fuller (2002), arXiv : 0205390.

Neutrino evolution for a density profile including shoch waves

1. Before the shock (adiabatic ν propagation).
2. The shock arrives (non-adiabatic prop.).



J. P. Kneller, G. C. McLaughlin, J. Brockman, PRD 77, 045023 (2008).



A simple analytical model proposed (it follows full numerical calculations at few % level).

S. Galais et al., PRD 81 (2010) 053002, arXiv :0906.5294.

$$S^\dagger = \begin{pmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & e^{i\delta} \end{pmatrix}$$

factorizes out easily and gives:

CP violation and core-collapse SN

A. B. Balantekin, J. Gava, C. Volpe, PLB662, 396 (2008), arXiv:0710.3112
J. Gava, C. Volpe, Phys. Rev. D78, 083007(2008), arXiv:0807.3418.

- We have demonstrated under which conditions there can be CP violating effects in supernovae. Here the main steps :

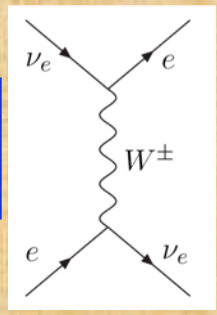
$$U = T_{23} S^\dagger T_{13}^0 S T_{12} = \begin{pmatrix} 1 & 0 & 0 \\ 0 & c_{23} & s_{23} \\ 0 & -s_{23} & c_{23} \end{pmatrix} \begin{pmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & e^{i\delta} \end{pmatrix} \begin{pmatrix} c_{13} & 0 & s_{13} \\ 0 & 1 & 0 \\ -s_{13} & 0 & c_{13} \end{pmatrix} \begin{pmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & e^{-i\delta} \end{pmatrix} \begin{pmatrix} c_{12} & s_{12} & 0 \\ -s_{12} & c_{12} & 0 \\ 0 & 0 & 1 \end{pmatrix}$$

The neutrino evolution equations in matter are

$$i\frac{\partial}{\partial t}\begin{pmatrix} \Psi_e \\ \tilde{\Psi}_\mu \\ \tilde{\Psi}_\tau \end{pmatrix} = \left[S^\dagger T_{13}^0 T_{12} \begin{pmatrix} E_1 & 0 & 0 \\ 0 & E_2 & 0 \\ 0 & 0 & E_3 \end{pmatrix} T_{12}^\dagger T_{13}^{0\,\dagger} S + \begin{pmatrix} V_c & 0 & 0 \\ 0 & 0 & 0 \\ 0 & 0 & 0 \end{pmatrix} \right] \begin{pmatrix} \Psi_e \\ \tilde{\Psi}_\mu \\ \tilde{\Psi}_\tau \end{pmatrix}$$

vacuum term

matterterm



with

$$\tilde{\Psi}_\mu = \cos\theta_{23}\Psi_\mu - \sin\theta_{23}\Psi_\tau \;\; and \;\; \tilde{\Psi}_\tau = \sin\theta_{23}\Psi_\mu + \cos\theta_{23}\Psi_\tau$$

the T23 basis

$$S^\dagger = \begin{pmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & e^{i\delta} \end{pmatrix}$$

factorizes out easily and gives:

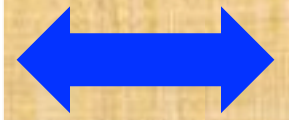
CP violation effect in SN

CP violation effect in SN

$$\tilde{H}(\delta) = S^{\dagger}\tilde{H}(\delta = 0)S$$

CP violation effect in SN

$$\tilde{H}(\delta) = S^{\dagger}\tilde{H}(\delta = 0)S$$

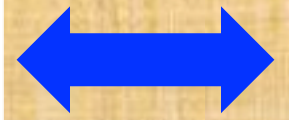


$$\tilde{U}(\delta) = S^{\dagger}\tilde{U}(\delta = 0)S$$

Evolution operator in the T_{23} basis

CP violation effect in SN

$$\tilde{H}(\delta) = S^{\dagger}\tilde{H}(\delta = 0)S$$



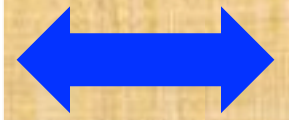
$$\tilde{U}(\delta) = S^{\dagger}\tilde{U}(\delta = 0)S$$

Evolution operator in the T_{23} basis

This leads to the two following relations:

CP violation effect in SN

$$\tilde{H}(\delta) = S^{\dagger}\tilde{H}(\delta = 0)S$$



$$\tilde{U}(\delta) = S^{\dagger}\tilde{U}(\delta = 0)S$$

Evolution operator in the T_{23} basis

This leads to the two following relations:

$$P(\nu_e \to \nu_e, \delta \neq 0) = P(\nu_e \to \nu_e, \delta = 0)$$

CP violation effect in SN

$$\tilde{H}(\delta) = S^{\dagger}\tilde{H}(\delta = 0)S \quad \Longleftrightarrow \quad \tilde{U}(\delta) = S^{\dagger}\tilde{U}(\delta = 0)S$$

Evolution operator in the T_{23} basis

This leads to the two following relations:

$$P(\nu_e \to \nu_e, \delta \neq 0) = P(\nu_e \to \nu_e, \delta = 0)$$

$$P(\nu_\mu \to \nu_e, \delta \neq 0) + P(\nu_\tau \to \nu_e, \delta \neq 0) = P(\nu_\mu \to \nu_e, \delta = 0) + P(\nu_\tau \to \nu_e, \delta = 0)$$

CP violation effect in SN

$$\tilde{H}(\delta) = S^{\dagger}\tilde{H}(\delta = 0)S \quad \Longleftrightarrow \quad \tilde{U}(\delta) = S^{\dagger}\tilde{U}(\delta = 0)S$$

Evolution operator in the T_{23} basis

This leads to the two following relations:

$$P(\nu_e \to \nu_e, \delta \neq 0) = P(\nu_e \to \nu_e, \delta = 0)$$

$$P(\nu_\mu \to \nu_e, \delta \neq 0) + P(\nu_\tau \to \nu_e, \delta \neq 0) = P(\nu_\mu \to \nu_e, \delta = 0) + P(\nu_\tau \to \nu_e, \delta = 0)$$

The electron neutrino flux in the SN:

$$\phi_{\nu_e}(\delta) = L_{\nu_e} P(\nu_e \to \nu_e) + L_{\nu_\mu} P(\nu_\mu \to \nu_e) + L_{\nu_\tau} P(\nu_\tau \to \nu_e)$$

CP violation effect in SN

$$\tilde{H}(\delta) = S^{\dagger}\tilde{H}(\delta = 0)S \quad \Longleftrightarrow \quad \tilde{U}(\delta) = S^{\dagger}\tilde{U}(\delta = 0)S$$

Evolution operator in the T_{23} basis

This leads to the two following relations:

$$P(\nu_e \to \nu_e, \delta \neq 0) = P(\nu_e \to \nu_e, \delta = 0)$$

$$P(\nu_\mu \to \nu_e, \delta \neq 0) + P(\nu_\tau \to \nu_e, \delta \neq 0) = P(\nu_\mu \to \nu_e, \delta = 0) + P(\nu_\tau \to \nu_e, \delta = 0)$$

The electron neutrino flux in the SN:

$$\phi_{\nu_e}(\delta) = L_{\nu_e} P(\nu_e \to \nu_e) + L_{\nu_\mu} P(\nu_\mu \to \nu_e) + L_{\nu_\tau} P(\nu_\tau \to \nu_e)$$

$$\phi_{\nu_e}(\delta) = L_{\nu_e} P(\nu_e \to \nu_e) + L_{\nu_\mu} (P(\nu_\mu \to \nu_e) + P(\nu_\tau \to \nu_e))$$

CP violation effect in SN

$$\tilde{H}(\delta) = S^{\dagger}\tilde{H}(\delta = 0)S \quad \Longleftrightarrow \quad \tilde{U}(\delta) = S^{\dagger}\tilde{U}(\delta = 0)S$$

Evolution operator in the T_{23} basis

This leads to the two following relations:

$$P(\nu_e \to \nu_e, \delta \neq 0) = P(\nu_e \to \nu_e, \delta = 0)$$

$$P(\nu_\mu \to \nu_e, \delta \neq 0) + P(\nu_\tau \to \nu_e, \delta \neq 0) = P(\nu_\mu \to \nu_e, \delta = 0) + P(\nu_\tau \to \nu_e, \delta = 0)$$

The electron neutrino flux in the SN:

$$\phi_{\nu_e}(\delta) = L_{\nu_e} P(\nu_e \to \nu_e) + L_{\nu_\mu} P(\nu_\mu \to \nu_e) + L_{\nu_\tau} P(\nu_\tau \to \nu_e)$$

$$\phi_{\nu_e}(\delta) = L_{\nu_e} P(\nu_e \to \nu_e) + L_{\nu_\mu}(P(\nu_\mu \to \nu_e) + P(\nu_\tau \to \nu_e)) \neq f(\delta)$$

CP violation effect in SN

$$\tilde{H}(\delta) = S^{\dagger}\tilde{H}(\delta = 0)S \quad \Longleftrightarrow \quad \tilde{U}(\delta) = S^{\dagger}\tilde{U}(\delta = 0)S$$

Evolution operator in the T_{23} basis

This leads to the two following relations:

$$P(\nu_e \to \nu_e, \delta \neq 0) = P(\nu_e \to \nu_e, \delta = 0)$$

$$P(\nu_\mu \to \nu_e, \delta \neq 0) + P(\nu_\tau \to \nu_e, \delta \neq 0) = P(\nu_\mu \to \nu_e, \delta = 0) + P(\nu_\tau \to \nu_e, \delta = 0)$$

The electron neutrino flux in the SN:

$$\phi_{\nu_e}(\delta) = L_{\nu_e} P(\nu_e \to \nu_e) + L_{\nu_\mu} P(\nu_\mu \to \nu_e) + L_{\nu_\tau} P(\nu_\tau \to \nu_e)$$

$$\phi_{\nu_e}(\delta) = L_{\nu_e} P(\nu_e \to \nu_e) + L_{\nu_\mu}(P(\nu_\mu \to \nu_e) + P(\nu_\tau \to \nu_e))$$

$\neq f(\delta)$ $\neq f(\delta)$

CP violation effect in SN

$$\tilde{H}(\delta) = S^{\dagger}\tilde{H}(\delta = 0)S \quad \Longleftrightarrow \quad \tilde{U}(\delta) = S^{\dagger}\tilde{U}(\delta = 0)S$$

Evolution operator in the T_{23} basis

This leads to the two following relations:

$$P(\nu_e \to \nu_e, \delta \neq 0) = P(\nu_e \to \nu_e, \delta = 0)$$

$$P(\nu_\mu \to \nu_e, \delta \neq 0) + P(\nu_\tau \to \nu_e, \delta \neq 0) = P(\nu_\mu \to \nu_e, \delta = 0) + P(\nu_\tau \to \nu_e, \delta = 0)$$

The electron neutrino flux in the SN:

$$\phi_{\nu_e}(\delta) = L_{\nu_e} P(\nu_e \to \nu_e) + L_{\nu_\mu} P(\nu_\mu \to \nu_e) + L_{\nu_\tau} P(\nu_\tau \to \nu_e)$$

$$\phi_{\nu_e}(\delta) = L_{\nu_e} P(\nu_e \to \nu_e) + L_{\nu_\mu}(P(\nu_\mu \to \nu_e) + P(\nu_\tau \to \nu_e))$$

$\neq f(\delta)$ $\neq f(\delta)$

At tree level no CP effects, however …

Neutrino properties leave an imprint on the neutron/proton ratio that sets the abundance of light elements.
Several properties have been studied in the past (ex. sterile neutrinos, non-standard interactions, …)

A.D. Dolgov, Phys. Rept 370, 333 (2002), hep-pth/0202122.

CP effects in the early Universe (BBN)

CP effects in the early Universe (BBN)

- A vaste literature exist on the possibility of a non-zero neutrino degeneracy parameter or neutrino asymmetry. Current best limit(s) come from BBN (He-4 abundance).

CP effects in the early Universe (BBN)

- A vaste literature exist on the possibility of a non-zero neutrino degeneracy parameter or neutrino asymmetry. Current best limit(s) come from BBN (He-4 abundance).

Calculations including mixing, e.g.

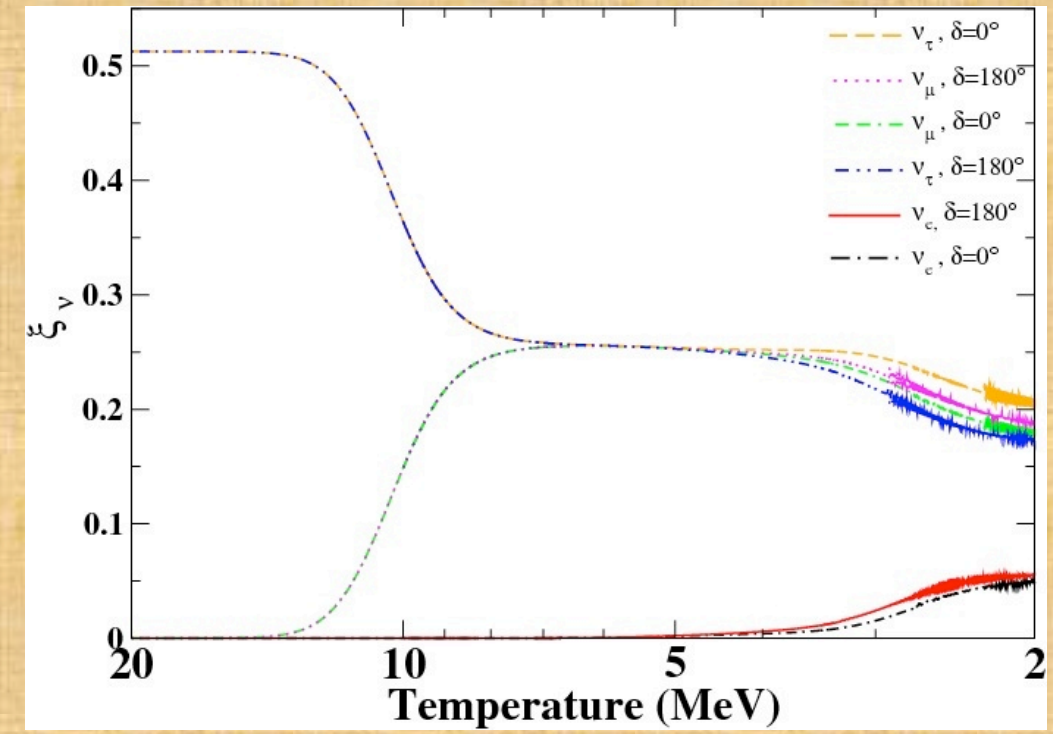
J. Gava, C. Volpe, Nucl. Phys. B 837 (2010) 50, arXiv:1002.0981.

Impact on the ν-degeneracy parameter

Our calculations include for the first time a non-zero CP violating Dirac phase in the neutrino evolution :



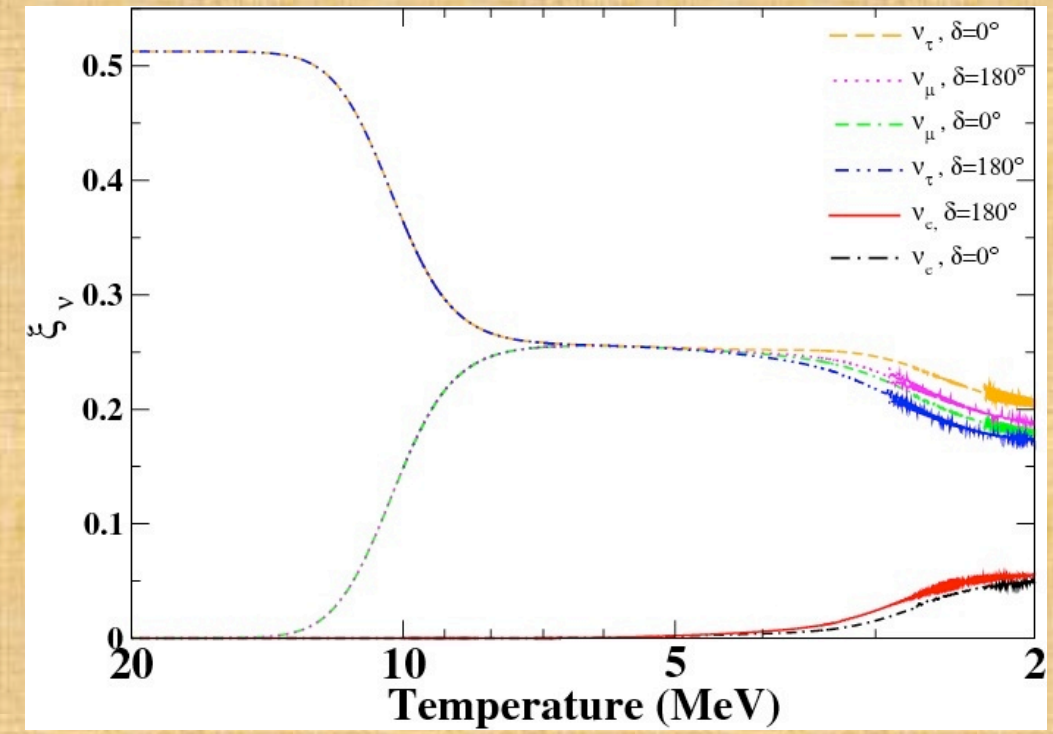
J. Gava, C. Volpe, Nucl. Phys. B 837 (2010) 50, arXiv:1002.0981.

WE have found CP EFFECTS UP TO 1% on ξ_e,

a few 10^{-3} on the He4 abundance.

Impact on the ν-degeneracy parameter

Our calculations include for the first time a non-zero CP violating Dirac phase in the neutrino evolution :



J. Gava, C. Volpe, Nucl. Phys. B 837 (2010) 50, arXiv:1002.0981.

WE have found CP EFFECTS UP TO 1% on ξ_e,

a few 10^{-3} on the He4 abundance.

In D. Horn's Master Thesis we are now implementing the full collision intergral.

Conclusions and Perspectives

Neutrino physics is entering a crucial phase where experiments will bring new results to key open issues.

Conclusions and Perspectives

Neutrino physics is entering a crucial phase where experiments will bring new results to key open issues.

Our understanding of neutrino propagation in media is undergoing major developments. Calculations have become demanding.

Conclusions and Perspectives

Neutrino physics is entering a crucial phase where experiments will bring new results to key open issues.

Our understanding of neutrino propagation in media is undergoing major developments. Calculations have become demanding.

Theoretical and phenomenological work still needed to come to an established framework.

Conclusions and Perspectives

Conclusions and Perspectives

We have set the basis for the exploration of CP violating effects in media.
In particular, radiative corrections and beyond the Standard Model physics can engender CP effects on the neutrino fluxes.

Further work is needed to study the possible impact e.g. on the r-process and in other Environments, such as the Early Universe.

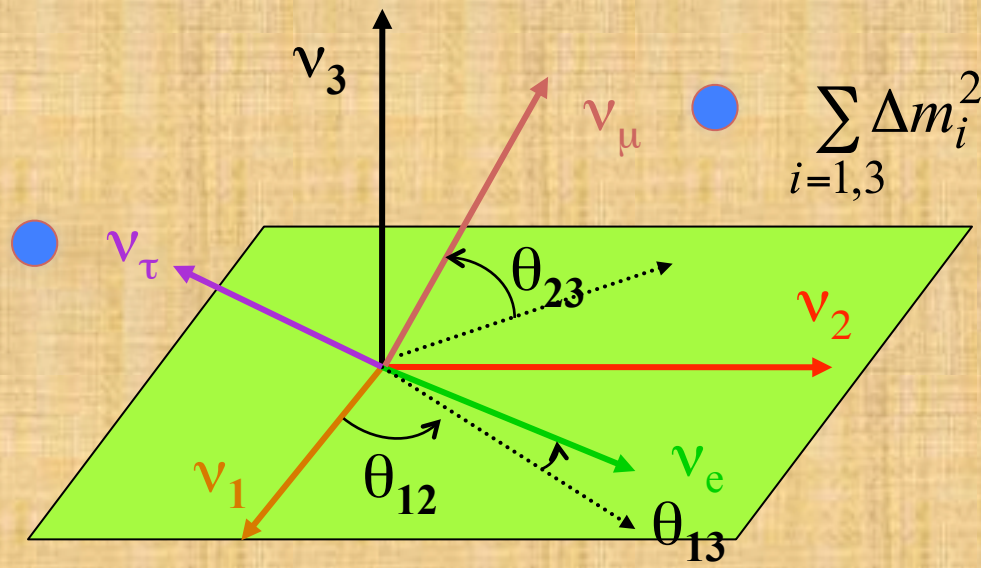
THE 3-flavours OSCILLATION PARAMETERS

- In the case of three families, there are three mass eigenstates (ν_1, ν_2, ν_3) and three flavour eigenstates (ν_e, ν_μ, ν_τ).



$$\sum_{i=1,3} \Delta m_i^2 = \underset{\Delta m_{21}^2}{m_2^2 - m_1^2} + \underset{\Delta m_{32}^2}{m_3^2 - m_2^2} + m_1^2 - m_3^2$$

Only two Δm^2 are independent.

The two basis are related by a unitary matrix, called the Maki-Nakagawa-Sakata-Pontecorvo (MNSP) matrix.

$$c_{ij} = \cos\theta_{ij} \quad s_{ij} = \sin\theta_{ij}$$

$$\begin{pmatrix} \nu_e \\ \nu_\mu \\ \nu_\tau \end{pmatrix} = \begin{pmatrix} 1 & 0 & 0 \\ 0 & c_{23} & s_{23} \\ 0 & -s_{23} & c_{23} \end{pmatrix} \begin{pmatrix} c_{13} & 0 & s_{13}e^{-i\delta} \\ 0 & 1 & 0 \\ -s_{13}e^{i\delta} & 0 & c_{13} \end{pmatrix} \begin{pmatrix} c_{12} & s_{12} & 0 \\ -s_{12} & c_{12} & 0 \\ 0 & 0 & 1 \end{pmatrix} \begin{pmatrix} \nu_1 \\ \nu_2 \\ \nu_3 \end{pmatrix}$$
