

Recent BABAR results on CP violation in B decays

jeudi 21 juillet 2011 11:15 (15 minutes)

We report on the study of the decay $B^+ \rightarrow D^0(D^0\text{bar}) K^+$ where the D^0 or $D^0\text{bar}$ decaying to $K\pi\pi^0$, with the Atwood Dunietz and Soni (ADS) method. We measure the ratios R_{ads} , R^+ , and R^- that, since the processes $B^+ \rightarrow D^0\text{bar}K^+$ and $B^+ \rightarrow D^0K^+$ are proportional to V_{cb} and V_{ub} , respectively, are sensitive to α and to the weak phase γ . We also report the results of CP violation studies of $B \rightarrow D\pi\pi$ and $B^0 \rightarrow DD$.
