

Other searches for a high mass Higgs boson at Tevatron.

Thursday, July 21, 2011 5:20 PM (15 minutes)

We present the result of searches for the Standard Model Higgs boson at the Tevatron in channels which provide additional sensitivity in the high mass region. These include specialized searches for the $H \rightarrow WW^{(*)} \rightarrow \ell^+ \ell'^-$ associated production with a W or a Z boson, resulting in three-leptons final states, searches for the $H \rightarrow WW^{(*)}$ decay in final states with 2 jets, a lepton and missing transverse energy, and searches for the $H \rightarrow ZZ^{(*)}$ decay in final states with four leptons or two leptons and two jets. These searches complement the main search channel $H \rightarrow WW^{(*)} \rightarrow \ell^+ \ell'^-$.
