

W and Z production measured using the ATLAS detector, and impact on partons densities of the proton

Friday, July 22, 2011 6:00 PM (15 minutes)

Cross sections, both inclusive and differential, and ratios of cross sections for W and Z boson production in proton-proton collisions are presented. The measurements are compared to the predictions of precise QCD calculations using a range of PDF fits. The impact of these measurements on event generators, future fits and their uncertainties is studied.
