

Top quark physics at CDF

Thursday, July 21, 2011 4:30 PM (30 minutes)

We present the recent results of top-quark physics using up to 8fb^{-1} of ppbar collisions analyzed by the CDF collaboration. The large number of top quark events analyzed, of the order of several thousands, allows stringent checks of the Standard Model predictions. Also, the top quark is widely believed to be a window to new physics. We will present the latest measurements of top quark intrinsic properties as well as direct searches for new physics in the top sector.

Primary author: Dr CDF, Collaboration (Purdue University)

Presenter: Mr POTAMIANOS, Karolos (Purdue University)

Session Classification: Top and Electroweak Physics

Track Classification: Top and Electroweak Physics
