

First SND detector results on hadron cross sections at VEPP-2000 e+e- collider

samedi 23 juillet 2011 09:00 (15 minutes)

The results of the first data taking run in the 1-2 GeV range with SND detector at VEPP-2000 e+e- collider are presented. The reported data are based on the integrated luminosity of 5.5pb^{-1} . The preliminary results on multihadron cross sections, e.g., $e+e-\rightarrow\pi^+\pi^-\pi^0$, $2\pi^0\gamma$, $\pi^+\pi^-\pi^0\pi^0$ are obtained. The future program is discussed.
