

Higgs bosons in the Next-to-Minimal Supersymmetric Standard Model

Friday, 22 July 2011 16:30 (15 minutes)

We review possible properties of Higgs bosons which are specific to the NMSSM as light CP-even scalars consistent with LEP bounds, decays into a pair of light CP-odd scalars, and enhanced branching ratios into two photons. The status of analyses to detect such unconventionally decaying Higgs bosons is discussed.
