

Higgs bosons of R-symmetric supersymmetric theories

Saturday, 23 July 2011 10:00 (15 minutes)

The Higgs sector of the R -symmetric supersymmetric model includes two iso-doublets $R_{\{d,u\}}$ in addition to the standard iso-doublets $H_{\{d,u\}}$. Masses and interactions of these novel states are analysed and their decay modes and production channels at the LHC and $e+e-$ colliders are calculated.
