

The MEUST Project

jeudi 19 avril 2012 15:00 (20 minutes)

The Mediterranean Eurocentre for Underwater Sciences and Technologies (MEUST) plans to deploy a second generation deep sea cabled infrastructure offshore of Toulon, France, within the framework of the European networks of neutrino telescopes KM3NeT and deep sea observatories EMSO. The project will be presented with emphasis on the layout of the deep sea infrastructure, its regional context and its multidisciplinary applications in environmental sciences.
