## Low Power Multi-Dynamics Front End Architecture for the Optical Module of a Neutrino Underwater Telescope

*mercredi 23 avril 2008 08:30 (10 minutes)*

A proposal for a new front-end architecture intended to capture signals in the optical module of an underwater neutrino telescope is described. It concentrates on the problem of high dynamic range, power consumption, signal reconstruction, charge and time precision. Preliminary test results on a demonstration board are shown.

**Auteur principal:** Dr LO PRESTI, Domenico (Catania University)

**Co-auteurs:** Dr CAPONETTO, Luigi (I.N.F.N. Catania); Dr RANDAZZO, Nunzio (I.N.F.N. Catania)

**Orateur:** Dr LO PRESTI, Domenico (Catania University)
