

Status of the results of double beta decay experiments

mercredi 10 octobre 2012 13:45 (40 minutes)

In my talk, I will present a status of various double beta decay experiments. Especially, I will focused on the various experimental approaches, the background of these experiments, their results or expected results on double-beta 2 and 0-neutrino half-lives and the corresponding limit on the effective neutrino mass.

Auteur principal: PERROT, Frédéric (CNRS/IN2P3/Bordeaux1)

Orateur: PERROT, Frédéric (CNRS/IN2P3/Bordeaux1)

Classification de Session: Double-beta decay and other rare processes

Classification de thématique: Beta-beta decays and other rare processes
