Angular Power Spectrum of the dark matter induced gamma ray background measured by Fermi

mercredi 7 novembre 2012 09:35 (25 minutes)

I will describe our approach to evaluate the dark matter induced gamma ray background angular power spectrum using up-to-date results from N-body simulations of our local environment and of the whole Universe. In light of recent Fermi-LAT measurements the Angular Power Spectrum is an interesting way to adress the dark matter indirect detection issue
