ZZ cross section measurement at 8 TeV

vendredi 8 mars 2013 19:30 (5 minutes)

The latest measurement of the SM ZZ production cross section at 8 TeV using data recorded by the ATLAS experiment at the Large Hadron Collider is presented. Events are selected consistent with two Z bosons decaying to electrons or muons. The cross section is measured in the experimental fiducial volume and then used to extract the total ZZ production cross section.
