## **The Status of the PICO Dark Matter Experiment**

*mardi 18 mars 2014 17:50 (15 minutes)*

This talk will present the current status of the PICO dark matter experimental program. PICO arose from the recent merger of the PICASSO and COUPP collaborations. They are currently operating two superheated liquid bubble chambers, PICO-2L and COUPP-60 at SNOLAB. The most recent results on the performance of these two detectors will be presented.
