## Basics

## in Misibles

neutrinos, dark matter \& dark energy physics

Invisibles School 2014
8-13 July, Gif-sur-Yvette, France
"False facts are highly injurious to the progress of science, for they often endure long; but false views, if supported by some evidence, do little harm, for every one takes a salutary pleasure in proving their falseness."

## Nuclear Reactors

Accelerators

The Imponderable

Lightness
Cosmic Gall
by John Updike (1963)
Neutrinos, they are very small.
They have no charge and have no mass,
And do not interact at all.
The earth is just a silly ball
To them, through which they simply pass
Like dirt maids down a drafty hall,
Or photons through a sheet of glass.
They snub the most exquisite gas,
Ignore the most substantial wall, cold shoulder steel and sounding brass,

Insult the stallion in his stall, And, scorning barriers of class, Infiltrate you and me! Like tall And painless guillotines, they fall Down through our heads into the grass.
At night, they enter from Nepal And pierce the lover and his lass From underneath the bed. You call It wonderful; I call it crass.
Lectures:

1. Basic Neutrino Properties
2. Neutrino Oscillations

Lecture 1

Basic Neutrino Properties

1. From Discovery to the Standard Model

ELEMENTARY PARTICLES

## Discovery of the First <br> Neutrino

1956 : Fred Reines \& Clyde Cowan
C.L. Cowan Jr, et al. Science 124, 103 (1956)
F. Reines and C.L. Cowan Jr, Nature 178, 446 (1956)

[^0]
## Discovery of the <br> Second Neutrino

1962 : Steinberger, Lederman \& Schwartz
the mulon neutrino

$$
p+p \rightarrow \pi+X
$$

$$
\nu_{\mu}+N \rightarrow \mu+Y
$$

## Discovery of the Third <br> Neutrino the tau neutrino

 2000: DONUT CollaborationDONUT Detector

Parity \& Charge
Conjugation Violation

The Standard Model

$$
S U(3)_{C} \times S U(2)_{L} \times U(1)_{Y}
$$

Electroweak Symmetry Group

- SU(2) $\mathrm{L}:$ weak isospin Group Generators: $I_{a}(a=1,2,3)$ with $\left[I_{a}, I_{b}\right]=i \varepsilon_{a b c} I_{c}$

$$
\text { egg. in 2D representation } I_{a}=\tau_{a} / 2
$$

- $U(1)_{Y}$ : hypercharge Group Generator: Y

The action of $Y$ on fermion fields is constrained by
Gell-Mann-Nishijima Relation

$$
Q=I_{3}+Y
$$

## The Standard Model

Representations of the fermion fields（which lead to the correct phenomenology）is

```
left-handed (L) chiral components: weak isospin doublets
```

$$
\begin{aligned}
& \boldsymbol{\sim} \mathbf{L}_{\mathbf{e}}=\binom{\nu_{e L}}{e_{L}} \\
& \mathbf{L}_{\mu}=\binom{\nu_{\mu L}}{\mu_{L}} \\
& \stackrel{\text { 山 }}{\text { 山 }} \mathbf{L}_{\tau}=\binom{\nu_{\tau L}}{\tau_{L}}
\end{aligned}
$$

$$
\begin{aligned}
& \mathrm{L}_{\alpha} \equiv(2,-1 / 2) \\
& Q_{\alpha} \equiv(2,1 / 6)
\end{aligned}
$$

The Standard Model

Representations of the fermion fields (which lead to the correct phenomenology) is
right-handed (R) chiral components: weak isospin singlets

$$
\begin{gathered}
e_{R}, \mu_{R}, \tau_{R} \\
\mathrm{E}_{\alpha} \equiv(1,-1) \\
\nu_{\text {ep }}, \tau_{\tau_{R}}
\end{gathered}
$$

not present in the SM

$$
\begin{aligned}
& \text { ( } u_{R}, c_{R}, t_{R} \\
& \mathrm{U}_{\alpha} \equiv(1,2 / 3) \\
& \alpha=u, c, t \\
& d_{R}, s_{R}, b_{R} \\
& \mathrm{D}_{\alpha} \equiv(1,-1 / 3) \\
& \alpha=d, s, b
\end{aligned}
$$

## Standard Model

## Quarks

| $u$ | $c$ | $t$ |
| :--- | :--- | :--- |
| $d$ | $s$ | $b$ |

## $e \mu \tau$

$\boldsymbol{V}_{e} \quad \boldsymbol{v}_{\mu} \quad \boldsymbol{V}_{\tau}$
Leptons
$j_{\mathrm{cc}}^{\mu}=\bar{f}_{\alpha} \gamma^{\mu} P_{L} f_{\alpha}^{\prime}$
$j_{\mathrm{nc}}^{\mu}=\bar{f}_{\alpha} \gamma^{\mu} P_{L} f_{\alpha}$ flavor diagonal

The Standard Model
Since $L$ and $R$ components of the fermion fields transform in different way, the presence of a bare mass term

$$
\mathcal{L}_{\text {mass }} \propto \overline{\mathbf{f}} \mathbf{f}=\overline{\mathbf{f}}_{\mathbf{L}} \mathbf{f}_{\mathbf{R}}+\overline{\mathbf{f}}_{\mathbf{R}} \mathrm{f}_{\mathrm{L}}
$$

in the SM Lagrangian is forbidden by $S U(2)_{L} \times U(1)_{Y}$ symmetry $\Rightarrow$ Fermion masses generated by the WIGS MECHANISM

$$
\begin{gathered}
S U(2)_{L} \times U(1)_{Y} \Rightarrow U(1)_{Q} \quad \text { after spontaneous symmetry breaking } \\
E W S B
\end{gathered}
$$

## The Standard Model

fermion masses arise from Yukawa interactions
$-\mathcal{L}_{\mathrm{Y}}=\mathbf{y}_{\alpha \beta}^{\mathbf{d}} \overline{\mathbf{Q}}_{\alpha} \boldsymbol{\Phi} \mathbf{D}_{\beta}+\mathbf{y}_{\alpha \beta}^{\mathbf{u}} \overline{\mathbf{Q}}_{\alpha} \tilde{\boldsymbol{\Phi}} \mathbf{U}_{\beta}+\mathbf{y}_{\alpha \beta}^{\ell} \overline{\mathbf{L}}_{\alpha} \boldsymbol{\Phi} \mathbf{E}_{\beta}+$ h.c.

$$
\begin{aligned}
& \boldsymbol{\Phi}(\mathbf{x})=\binom{\Phi^{+}(x)}{\Phi^{0}(x)} \equiv(\mathbf{2}, \mathbf{1} / \mathbf{2}) \quad \tilde{\mathbf{\Phi}}(\mathbf{x})=\mathbf{i} \tau_{2} \mathbf{\Phi}(\mathbf{x})^{*} \equiv(\mathbf{2},-\mathbf{1} / \mathbf{2}) \\
& \mathbf{\Phi} \rightarrow\langle\boldsymbol{\Phi}\rangle=\frac{\mathbf{1}}{\sqrt{\mathbf{2}}}\binom{0}{\mathbf{v}} \quad \mathbf{\Phi}=\frac{\mathbf{1}}{\sqrt{\mathbf{2}}}\binom{0}{\mathbf{v}+\mathbf{h}}
\end{aligned}
$$

tings acquires a vel
Unitary Gauge
since we do not $V_{R}$ have no mass etree-level
but can they acquire mass by loop corrections?

Can we have $m_{\nu} \neq 0$ in the
SM?
a loop correction could induce an effective mass term like .... $\frac{\mathbf{y}_{\alpha \beta}^{\nu}}{\mathbf{v}} \Phi \Phi \mathbf{L}_{\alpha} \mathbf{L}_{\beta}$

But the SM has an accidental global symmetry

$$
\mathbf{G}_{\mathrm{SM}}=\mathbf{U}(\mathbf{1})_{\mathbf{B}} \times \mathbf{U}(\mathbf{1})_{\mathbf{L}_{\mathbf{e}}} \times \mathbf{U}(\mathbf{1})_{\mathbf{L}_{\mu}} \times \mathbf{U}(\mathbf{1})_{\mathbf{L}_{\tau}}
$$

No! Neutrinos have no mass in the SM!

Can we have $m_{\nu} \neq 0$ in the
SM?
a loop correction could induce an effective mass term like.... $\frac{\mathbf{y}_{\alpha \beta}^{\nu}}{\mathbf{v}} \boldsymbol{\Phi} \Phi \mathbf{L}_{\alpha} \mathbf{L}_{\beta}$
this term violates GSM
But the SM has an accidental global
symmetry

$$
\mathbf{G}_{\mathrm{SM}}=\mathbf{U}(\mathbf{1})_{\mathbf{B}} \times \mathbf{U}(\mathbf{1})_{\mathbf{L}_{\mathbf{e}}} \times \mathbf{U}(\mathbf{1})_{\mathbf{L}_{\mu}} \times \mathbf{U}(\mathbf{1})_{\mathbf{L}_{\tau}}
$$

No! Neutrinos have no mass in the SM!

## LEPTON NUMBER

$$
L \equiv L_{e}+L_{\mu}+L_{\tau}
$$

|  | $L_{e}$ | $L_{\mu}$ | $L_{\tau}$ |  | $L_{e}$ | $L_{\mu}$ | $L_{\tau}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $e, \nu_{e}$ | +1 | 0 | 0 | $\bar{e}, \bar{\nu}_{e}$ | -1 | 0 | 0 |
| $\mu, \nu_{\mu}$ | 0 | +1 | 0 | $\bar{\mu}, \nu_{\mu}$ | 0 | -1 | 0 |
| $\tau, \nu_{\tau}$ | 0 | 0 | +1 | $\bar{\tau}, \bar{\nu}_{\tau}$ | 0 | 0 | -1 | conservation of each lepton number $L_{\alpha}$ related through Noether's Theorem to the invariance of the Lagrangian under a global $U(1)$ transformation

$$
\ell_{\alpha} \rightarrow e^{i \theta_{\alpha}} \ell_{\alpha} \quad \partial_{\mu} j^{\mu}=0
$$

associated to a conserved current and the conserved charge $L_{\alpha}$

Neutrino Oscillations w Need Masses \& Mixings

Neutrino Oscillations w Need Masses \& Mixings

Reactor $\nu$

2. Dirac versus Majorana

Majorana $\times$ Dirac $\nu$

Dirac spinor
$\Psi=P_{L} \Psi+P_{R} \Psi=\Psi_{L}+\Psi_{R} 4$ independent components
Dirac equation
$i \gamma_{\mu} \partial^{\mu} \Psi_{L}=m \Psi_{R}$
$i \gamma_{\mu} \partial^{\mu} \Psi_{R}=m \Psi_{L}$

Majorana $\times$ Dirac $\nu$

Dirac spinor
$\Psi=P_{L} \Psi+P_{R} \Psi=\Psi_{L}+\Psi_{R} 4$ independent components

Dirac equation
Weyl (1929)
$i \gamma_{\mu} \partial^{\mu} \Psi_{L}=m \Psi_{R}$ if $m=0 \quad$ 2-component spinor is $i \gamma_{\mu} \partial^{\mu} \Psi_{R}=m \Psi_{L} \quad$ enough ( $\Psi_{L}$ or $\left.\Psi_{R}\right)$

Pauli (1933) rejected this idea because leads to Parity Violation

Landau, Lee-Yang, Salam (1957) propose to describe the massless neutrino by a Weyl spinor $V_{L} \quad \begin{aligned} & \text { introduced in the SM } \\ & \text { in the } 60^{\circ} \text { 's }\end{aligned}$

Majorana $\times$ Dirac $v$
Can we also describe a massive fermion using a 2-component spinor?
(E. Majorana, 1937)

Majorana $\times$ Dirac $\nu$
Can we also describe a massive fermion using a 2-component spinor?
(E. Majorana, 1937)

$$
\begin{array}{ll}
\Psi^{C}=C \bar{\Psi}^{T} & \text { charge conjugate field } \\
\left(\Psi_{L}\right)^{C}=\left(\Psi^{C}\right)_{R} & \left(\Psi_{R}\right)^{C}=\left(\Psi^{C}\right)_{L}
\end{array}
$$

charge conjugation change chirality

$$
\begin{array}{r}
i \gamma_{\mu} \partial^{\mu}\left(\Psi_{L}\right)^{c}=m\left(\Psi_{R}\right)^{c} \Leftrightarrow i \gamma_{\mu} \partial^{\mu}\left(\Psi_{R}\right)^{c}=m\left(\Psi_{L}\right)^{c} \\
\Psi_{L, R} \equiv \xi\left(\Psi_{R, L}\right) c=\xi \subset \bar{\Psi}_{R, L} \tau \\
\xi \equiv e^{-i \alpha} \quad \text { phase factor }
\end{array}
$$

Majorana $\times$ Dirac $\nu$
Can we also describe a massive fermion using a 2-component spinor? Yes!
(E. Majorana, 1937)
$\xi$ is unphysical - can be eliminated by rephasing
Majorana Condition: $\Psi \equiv(\Psi)^{C}$ particle $\equiv$ antiparticle
Majorana Field: $\quad \Psi=\Psi_{L}+\Psi_{R}=\Psi_{L}+\left(\Psi_{L}\right)^{C}$
Majorana Equation: $\mathbf{i} \gamma_{\mu} \partial^{\mu} \mathbf{\Psi}_{\mathbf{L}}=\mathbf{m} \mathbf{C}{\overline{\mathbf{\Psi}_{\mathbf{L}}}}^{\mathbf{T}}$

Majorana $\times$ Dirac $\nu$
Can we also describe a massive fermion using a 2-component spinor? Yes!
(E. Majorana, 1937)
$\xi$ is unphysical - can be eliminated by rephasing
Majorana Condition: $\Psi \equiv(\Psi)$ C particle $\equiv$ antiparticle
Majorana Field: $\quad \Psi=\Psi_{L}+\Psi_{R}=\Psi_{L}+\left(\Psi_{L}\right) C$ Majorana Equation: $\quad \mathbf{i} \gamma_{\mu} \partial^{\mu} \mathbf{\Psi}_{\mathbf{L}}=\mathbf{m} \mathbf{C} \overline{\mathbf{\Psi}}_{\mathbf{L}} \mathbf{T}$
em. Current vanishes $Q \equiv 0 \quad$ neutral particle

$$
\overline{\mathbf{\Psi}} \gamma^{\mu} \mathbf{\Psi}=\overline{\mathbf{\Psi}^{\mathbf{c}}} \gamma^{\mu} \mathbf{\Psi}^{\mathbf{c}}=-\boldsymbol{\Psi}^{\mathbf{T}} \mathbf{C}^{\dagger} \gamma^{\mu} \mathbf{C} \overline{\boldsymbol{\Psi}}^{\mathbf{T}}=\overline{\mathbf{\Psi}} \mathbf{C}^{\mathbf{T}} \gamma^{\mu \mathbf{T}} \mathbf{C}^{*} \boldsymbol{\Psi}=-\overline{\mathbf{\Psi}} \gamma^{\mu} \mathbf{\Psi}
$$

Some Properties

$$
\begin{gathered}
\gamma^{\circ} \gamma^{\mu t}=\gamma^{\mu} \gamma^{\circ} \\
C^{\top}=C^{+}=C^{-1}=-C \\
C^{-1} \gamma^{\mu}=-\gamma^{\mu \top} C^{-1} \\
\frac{\Psi^{C}}{C}=\left(C \gamma^{\circ} \Psi^{*}\right)^{t} \gamma^{0}=\Psi^{\top} \gamma^{\circ} C^{+} \gamma^{0}=\Psi^{\top} C \\
C^{\top} \gamma^{\mu \top} C^{*}=(-C) \gamma^{\mu \top}\left(-C^{-1}\right)=C \gamma^{\mu \top} C^{-1} \\
\therefore C^{\top} \gamma^{\mu \top} C^{*}=-C C^{-1} \gamma^{\mu}=-\gamma^{\mu}
\end{gathered}
$$

Majorana $\times$ Dirac $\nu$
Dirac:

$$
\nu(\vec{p}, h) \stackrel{\hat{p}}{\Rightarrow} \nu(-\vec{p},-h) \stackrel{\hat{C}}{\leftrightarrows} \nu(\vec{p},-h) \stackrel{\hat{T}}{\Rightarrow} \bar{\nu}(\vec{p},-h)
$$

$\angle \psi_{1}$ neutrino $(h=-1)$
$P_{H}$ antineutrino $(h=+1)$
Majorana:

$$
\nu(\vec{p}, h) \stackrel{\hat{p}}{\Rightarrow} \nu(-\vec{p},-h) \stackrel{\hat{C}}{\Rightarrow} \nu(\vec{p},-h) \stackrel{\hat{T}}{\Rightarrow} \nu(\vec{p},-h)
$$

$\angle \psi$ neutrino $(h=-1)$ $R H$ neutrino $(h=+1)$
interactions involve on $\angle \psi \mid$ fields

$$
\begin{aligned}
& \nu_{L}\left\langle\begin{array}{l}
\text { destroys } L H \text { neutrino } \\
\text { creates } R H \text { antineutrino }
\end{array}\right. \\
& \bar{\nu}_{L} \text { distal } \text { dirac antineutrino } \\
& \text { creates } L H \text { neutrino }
\end{aligned}
$$

Majorana $\times$ Dirac $\nu$
Dirac:

$$
\nu(\vec{p}, h) \stackrel{\hat{p}}{\vec{p}} v(-\vec{p},-h) \stackrel{\hat{C}}{\leftrightharpoons} \bar{\nu}(-\vec{p},-h) \stackrel{\hat{T}}{\Rightarrow} \bar{v}(\vec{p},-h)
$$

$\angle H$ neutrino ( $h=-1$ )
RH/ antineutrino $(h=+1)$
Majorana:

$$
\nu(\vec{p}, h) \stackrel{\hat{p}}{\Rightarrow} \nu(-\vec{p},-h) \stackrel{\hat{C}}{\Leftrightarrow} \nu(\vec{p},-h) \stackrel{\hat{T}}{\Rightarrow} \nu(\vec{p},-h)
$$

$\angle H$ neutrino ( $h=-1$ )
RH/ neutrino $(h=+1)$
interactions involve on $\angle H$ fields

$$
\begin{aligned}
& \nu L \text { destroys } \angle H \text { neutrino } \begin{array}{l}
\text { creates } R H \text { neutrino }
\end{array} \quad \text { Majorana } \\
& \bar{\nu}_{L} \text { destroys } R H \text { neutrino } \\
& \text { creates } L H \text { neutrino }
\end{aligned}
$$

3. Mass Terms for Neutrinos

(1) "Poor man's" extension of the SM

## If $\nu \neq \nu^{\mathrm{c}}=\mathrm{C} \bar{\nu}^{\mathrm{T}} \quad$ Dirac Particle

symmetrize the model, offers no explanation to the smallness of $M v$

$$
L_{\alpha} \equiv(2,-1 / 2) \quad E_{\alpha} \equiv(1,-1) \quad N_{\alpha} \equiv(1,0)
$$

$$
-\mathcal{L}_{\mathrm{Y}}=\mathbf{y}_{\alpha \beta}^{\mathbf{d}} \overline{\mathbf{Q}}_{\alpha} \boldsymbol{\Phi} \mathbf{D}_{\beta}+\mathbf{y}_{\alpha \beta}^{\mathbf{u}} \overline{\mathbf{Q}}_{\alpha} \tilde{\boldsymbol{\Phi}} \mathbf{U}_{\beta}+\mathbf{y}_{\alpha \beta}^{\ell} \overline{\mathbf{L}}_{\alpha} \boldsymbol{\Phi} \mathbf{E}_{\beta}+\text { h.c. }
$$

$$
+\mathbf{y}_{\alpha \beta}^{\nu} \overline{\mathbf{L}}_{\alpha} \tilde{\boldsymbol{\Phi}} \mathbf{N}_{\beta}+\text { h.c. }
$$

$E W S B$
*riggs acquires aver $\quad \Rightarrow-m_{\mathbf{D}} \bar{\nu}_{\mathbf{L}} \nu_{\mathbf{R}}+$ h.c.
(1) "Poor man's" extension of the SM $-\mathcal{L}_{\mathrm{Y}}=\left(\frac{\mathbf{v}+\mathbf{h}}{\sqrt{\mathbf{2}}}\right)\left[\overline{\ell_{\mathbf{L}}^{\prime}} \mathbf{y}^{\ell^{\prime}} \ell_{\mathbf{R}}^{\prime}+\overline{\mathbf{N}_{\mathbf{L}}^{\prime}} \mathbf{y}^{\nu^{\prime}} \mathbf{N}_{\mathbf{R}}^{\prime}\right]+$ h.c.
$\ell_{\mathbf{L}, \mathbf{R}}^{\prime} \equiv\left(\begin{array}{c}e^{\prime} \\ \mu^{\prime} \\ \tau^{\prime}\end{array}\right)_{\mathbf{L}, \mathbf{R}} \begin{array}{ll}\ell_{\mathbf{L}, \mathbf{R}}=\mathbf{V}_{\mathbf{L}, \mathbf{R}}^{\ell \dagger} \ell_{\mathbf{L}, \mathbf{R}}^{\prime} & \begin{array}{c}\text { real positive } \\ \mathbf{y}^{\ell}=\mathbf{V}_{\mathbf{t}}^{\ell \dagger} \mathbf{y}^{\mathbf{y}^{\prime}} \mathbf{V}_{\mathbf{R}}^{\ell} \\ \text { unites } \\ \text { unitary matrices }\end{array} \\ \mathbf{y}_{\alpha \beta}^{\ell}=\mathbf{y}_{\alpha}^{\ell} \delta_{\alpha \beta}\end{array}$

$$
\mathbf{N}_{\mathbf{L}, \mathbf{R}}^{\prime} \equiv\left(\begin{array}{c}
\nu_{e}^{\prime} \\
\nu_{\mu}^{\prime} \\
\nu_{\tau}^{\prime}
\end{array}\right)_{\mathbf{L}, \mathbf{R}} \quad \mathbf{N}_{\mathbf{L}, \mathbf{R}}=\mathbf{V}_{\mathbf{L}, \mathbf{R}}^{\nu}=\mathbf{V}_{\mathbf{L}}^{\nu \dagger} \mathbf{N}_{\mathbf{L}, \mathbf{R}}^{\prime} \mathbf{y}^{\nu^{\prime}} \mathbf{V}_{\mathbf{R}}^{\nu} \quad \begin{gathered}
\text { real positive } \\
\mathbf{y}_{\alpha \beta}^{\nu}=\mathbf{y}_{\alpha}^{\nu} \delta_{\alpha \beta}
\end{gathered}
$$

(1) "Poor man's" extension of the SM

$$
\begin{gathered}
\text { masses } \\
\ell_{\mathbf{L}, \mathbf{R}} \equiv\left(\begin{array}{c}
e \\
\mu \\
\tau
\end{array}\right)_{\mathbf{L}, \mathbf{R}} \equiv\left(\begin{array}{c}
e_{e} \\
e_{\mu} \\
e_{\tau}
\end{array}\right)_{\mathbf{L}, \mathbf{R}} \text { nesses } \\
\text { new } \\
\mathbf{N}_{\mathbf{L}, \mathbf{R}} \equiv\left(\begin{array}{c}
\nu_{1} \\
\nu_{2} \\
\nu_{3}
\end{array}\right)_{\mathbf{L}, \mathbf{R}}
\end{gathered}
$$

Yukawas have to be fine-tuned to explain smallness of neutrino masses
Ok. But what happens to the CC and NC?
(1) "Poor man's" extension of the SM
charged current for leptons
$\mathbf{j}_{\mathbf{W}, \mathbf{L}}^{\mu}=\mathbf{2} \bar{\nu}_{\alpha}^{\prime} \gamma^{\mu} \mathbf{P}_{\mathbf{L}} \mathbf{e}_{\alpha}^{\prime}=\mathbf{2} \bar{\nu}_{\alpha \mathbf{L}}^{\prime} \gamma^{\mu} \mathbf{e}_{\alpha \mathbf{L}}^{\prime}=\mathbf{2} \overline{\mathbf{N}}_{\mathbf{L}}^{\prime} \gamma^{\mu} \ell_{\mathbf{L}}^{\prime}$ chiral flavor diagonal interaction
$=\mathbf{2} \overline{\mathbf{N}_{\mathbf{L}}} \mathbf{V}_{\mathbf{L}}^{\nu \dagger} \mathbf{V}_{\mathbf{L}}^{\ell} \gamma^{\mu} \ell_{\mathbf{L}}=\mathbf{2} \overline{\nu_{\mathbf{i} \mathbf{L}}} \mathbf{U}_{\alpha \mathbf{i}}^{*} \gamma^{\mu} \mathbf{e}_{\alpha \mathbf{L}}$
Mixing Matrix (Pontecorvo, Maki, Sakata, Nakagawa)
define $\angle \psi \mid$ flavor neutrinos as

$$
\nu_{\alpha \mathbf{L}}=\mathbf{U}_{\alpha \mathbf{i}} \nu_{\mathbf{i} \mathbf{L}}
$$

Mixing $\Rightarrow$ family Lepton Number $\left(L_{e}, L_{\mu}, L_{\tau}\right)$ violated but Total Lepton Number ( $L$ ) conserved
(1) "Poor man's" extension of the SM
neutral current for neutrinos

$$
\begin{aligned}
& \mathbf{j}_{\mathbf{Z}, \nu}^{\mu}=\bar{\nu}_{\alpha \mathbf{L}} \gamma^{\mu} \nu_{\alpha \mathbf{L}} \quad \text { chirod flacor diggonou interaction } \\
& =\bar{\nu}_{\mathbf{i} \mathbf{L}} \gamma^{\mu} \nu_{\mathbf{i} \mathbf{L}} \quad \text { Nomiximg here: }
\end{aligned}
$$

NC is the same (GIM Mechanism)
[S.L.Glashow, J. Iliopolos, L. Maiani, Phys. Rev. D 2, 1285 (1970)]
$\nu_{p}$ is sterile!
$L_{\alpha}$ Violating Processes
Dirac mass term allows for $K_{e}, K_{\mu}, K_{\tau}$ processes such as: $\mu^{ \pm} \rightarrow e^{ \pm} \gamma$ or $\mu^{ \pm} \rightarrow e^{ \pm} e^{+} e^{-}$
eg. $\mu^{ \pm} \rightarrow e^{ \pm} \gamma \quad \sum_{\mathbf{j}} \mathbf{U}_{\mu \mathbf{j}}^{*} \mathbf{U}_{\mathbf{e j}}=\mathbf{0} \quad$ GIM Mechanism

Phases of $U$

$$
\mathbf{j}_{\mathbf{W}, \mathbf{L}}^{\mu}=\mathbf{2} \overline{\nu_{\mathbf{i L}}} \mathbf{U}_{\alpha \mathbf{i}}^{*} \gamma^{\mu} \mathbf{e}_{\alpha \mathbf{L}}
$$

Can re-phase $\mathbf{e}_{\alpha \mathbf{L}} \rightarrow \mathbf{e}^{\mathbf{i} \phi_{\alpha}} \mathbf{e}_{\alpha \mathbf{L}} \quad \nu_{\mathbf{i L}} \rightarrow \mathbf{e}^{\mathbf{i} \phi_{\mathbf{i}}} \nu_{\mathbf{i L}}$

$$
\mathbf{j}_{\mathbf{W}, \mathbf{L}}^{\mu}=\mathbf{2} \overline{\nu_{\mathbf{i} \mathbf{L}}} \mathbf{e}^{-\mathbf{i}\left(\phi_{\mathbf{1}}-\phi_{\mathbf{e}}\right)} \mathbf{e}^{-\mathbf{i}\left(\phi_{\mathbf{i}}-\phi_{\mathbf{1}}\right)} \mathbf{e}^{\mathbf{i}\left(\phi_{\alpha}-\phi_{\mathbf{e}}\right)} \mathbf{U}_{\alpha \mathbf{i}}^{*} \gamma^{\mu} \mathbf{e}_{\alpha \mathbf{L}}
$$

$1+2(N-1)=2 N-1$ phases can be arbitrarily chosen
$N=3 \rightarrow 5$ phases can be eliminated from $U$ only I physical phase

Basic Points:
we need to introduce singlet $R$ neutrino fields ( $\nu R$ )
we make use of the SM Higgs Mechanism

$$
\mathcal{L}_{\mathrm{mass}}^{\mathrm{D}}=-m \bar{\nu} \nu=-m\left(\bar{\nu}_{R} \nu_{L}+\bar{\nu}_{L} \nu_{R}\right)
$$

mass hierarchy problem remains $m_{j}^{\nu}=\frac{y_{j}^{\nu} v}{\sqrt{2}}$
$L_{e}, L_{\mu}, L_{\tau}$ are violated
$L$ is conserved (exact global symmetry at the classical level, just like B)
generates a mixing matrix analogous to $V_{C K M}$
(2) + Clever extensions of the SM

If $\nu=\nu^{\mathrm{c}}=\mathrm{C} \bar{\nu}^{\mathrm{T}} \quad$ Majorana Particle
if we introduce $\nu_{R}$ we can have
Majorana Mass Term

El.

$$
-\frac{1}{2} \mathrm{~m}_{\mathbf{R}} \overline{\nu_{\mathbf{R}}^{\mathrm{c}}} \nu_{\mathbf{R}}+\text { h.c. }
$$

$L$ is violated by 2 units
$\mathbf{P}_{\mathbf{L}} \nu_{\mathbf{R}}^{\mathbf{c}}=\nu_{\mathbf{R}}^{\mathrm{c}} \quad$ this is invariant under $S U(2)_{L} \times U(1)_{Y}$

Dirac-Majorana

$$
\mathbf{M}^{\mathbf{D}+\mathbf{M}}=\left(\begin{array}{cc}
0 & \left(M^{D}\right)^{T} \\
M^{D} & M^{R}
\end{array}\right) \quad \text { complex symmetric }
$$

$M_{D}$ is a $3 \times m$ complex matrix $M_{R}$ is a $m \times m$ symmetric matrix
(a) mass eigenvalues of $M^{R} \gg v \Rightarrow$ framework of seesaw mechanism sterile neutrinos integrated out \& get a low energy effective theory with 3 light active Majorana neutrinos
(b) Some mass eigenvalues of $M^{R} \leq v \Rightarrow$ more than 3 light Majorana neutrinos
(c) $M^{R}=0 \Rightarrow$ equivalent to impose $L$ conservation, $m=3$ and we can identify the 3 sterile neutrinos $C / R H$ components of the LH fields (Dirac Neutrinos)
(2) + Clever extensions of the SM If $\nu=\nu^{\mathrm{c}}=\mathrm{C} \bar{\nu}^{\mathrm{T}} \quad$ Majorana Particle if we don't introduce $v_{p}$ we can have Majorana Mass Term

$$
\begin{aligned}
& \text { Et. } \quad-\frac{1}{2} \mathrm{~m}_{\mathrm{L}} \overline{\nu_{\mathrm{L}}^{\mathrm{c}}} \nu_{\mathrm{L}}+\text { h.c. } \quad \text { Lis violated } \\
& \text { by } 2 \text { units }
\end{aligned}
$$

$\mathrm{P}_{\mathrm{R}} \nu_{\mathrm{L}}^{\mathrm{C}}=\nu_{\mathrm{L}}^{\mathrm{C}}$ but not invariant under $\mathrm{S} U(2)_{L} \times U(1)_{Y}$ need to extend the SM ...

## Majorana Mass Term

we can write a Majorana mass term with only $\nu_{L}$

$$
\text { (or } \nu R)
$$

$\mathbf{P}_{\mathbf{R}} \nu_{\mathbf{L}}^{\mathbf{c}}=\nu_{\mathbf{L}}^{\mathbf{c}}$
$\nu^{\mathbf{c}}=\nu \Longrightarrow \nu=\nu_{\mathbf{L}}+\nu_{\mathbf{L}}^{\mathbf{c}} \Longrightarrow \mathcal{L}_{\text {mass }}^{\mathrm{ML}}=-\frac{1}{\mathbf{2}} \mathbf{m}_{\mathbf{L}} \overline{\nu_{\mathbf{L}}^{\mathbf{c}}} \nu_{\mathbf{L}}+$ h.c.
the $1 / 2$ factor avoids double counting since $\nu_{L}$ and $\nu_{L}$
are not independent

$$
\begin{gathered}
\mathcal{L}^{\mathrm{ML}}=\frac{\mathbf{1}}{\mathbf{2}}\left[\bar{\nu}_{\mathbf{L}} \imath \not \partial \nu_{\mathbf{L}}+\bar{\nu}_{\mathbf{L}}^{\mathbf{c}} \imath \not \partial \nu_{\mathbf{L}}^{\mathbf{c}}-\mathbf{m}_{\mathbf{L}}\left(\bar{\nu}_{\mathbf{L}}^{\mathbf{c}} \nu_{\mathbf{L}}+\bar{\nu}_{\mathbf{L}} \nu_{\mathbf{L}}^{\mathbf{c}}\right)\right] \\
\mathcal{L}_{\text {mass }}^{\mathrm{ML}}=\frac{\mathbf{m}_{\mathbf{L}}}{\mathbf{2}}\left(\nu_{\mathbf{L}}^{\mathbf{T}} \mathbf{C}^{\dagger} \nu_{\mathbf{L}}+\nu_{\mathbf{L}}^{\dagger} \mathbf{C} \nu_{\mathbf{L}}^{*}\right)
\end{gathered}
$$

Basic Points:

- no need to introduce singlet $R$ fields $(\nu, R)$
- use $\nu_{\mathbf{R}} \rightarrow \nu_{\mathbf{L}}^{\mathbf{c}}=\mathbf{C}{\overline{\nu_{\mathbf{L}}}}^{\mathbf{T}}$ and $\nu=\nu^{\mathbf{c}}$

$$
\begin{array}{r}
\nu=\nu_{\mathbf{L}}+\nu_{\mathbf{R}}=\nu_{\mathbf{L}}+\mathbf{C}{\overline{\nu_{\mathbf{L}}}}^{\mathbf{T}} \\
\mathcal{L}_{\text {mass }}^{\mathrm{ML}}=-\frac{\mathbf{m}}{\mathbf{2}}\left(\overline{\nu_{\mathbf{L}}^{\mathbf{c}}} \nu_{\mathbf{L}}+\text { h.c. }\right)
\end{array}
$$

need a Wigs triplet $(Y=1)$ to form a $S U(2)_{L} \otimes U(1)_{Y}$ invariant term ( $\angle \Delta L$ )
$L_{e}, L_{\mu}, L_{\tau}$ are violated
$L$ is also violated by 2 units

The most general mass term is a Dirac-Majorana Mass Term

Ez.

$$
\mathcal{L}_{\text {mass }}^{\mathrm{D}+\mathrm{M}}=\mathcal{L}_{\text {mass }}^{\mathrm{D}}+\mathcal{L}_{\text {mass }}^{\mathrm{ML}}+\mathcal{L}_{\text {mass }}^{\mathrm{MR}}
$$

$\mathcal{L}_{\text {mass }}^{\mathrm{D}}=-\mathbf{m}_{\mathbf{D}} \bar{\nu}_{\mathbf{R}} \nu_{\mathbf{L}}+$ h.c. $\quad$ Dirac Mass Term $\mathcal{L}_{\text {mass }}^{\mathrm{ML}}=\frac{\mathbf{1}}{\mathbf{2}} \mathbf{m}_{\mathbf{L}} \nu_{\mathbf{L}}^{\mathbf{T}} \mathbf{C}^{\dagger} \nu_{\mathbf{L}}+$ h.c. $\quad$ Majorana Mass Term

$$
\mathcal{L}_{\text {mass }}^{\mathrm{MR}}=\frac{1}{\mathbf{2}} \mathbf{m}_{\mathbf{R}} \nu_{\mathbf{R}}^{\mathrm{T}} \mathbf{C}^{\dagger} \nu_{\mathbf{R}}+\text { h.c. } \quad \text { Majorana Mass Term }
$$

## Mixing in General

$$
\begin{gathered}
\mathbf{N}_{\mathbf{L}}^{\prime} \equiv\binom{\nu_{L}^{\prime}}{\nu_{R}^{\prime c}} \quad \nu_{\mathbf{L}}^{\prime} \equiv\left(\begin{array}{c}
\nu_{e L}^{\prime} \\
\nu_{\mu L}^{\prime} \\
\nu_{\tau L}^{\prime}
\end{array}\right) \quad \nu_{\mathbf{R}}^{\prime \mathbf{c}} \equiv\left(\begin{array}{c}
\nu_{1 R}^{\prime c} \\
\cdot \\
\cdot \\
\nu_{N_{s} R}^{\prime c}
\end{array}\right) \\
\mathcal{L}_{\text {mass }}^{\mathrm{D}+\mathrm{M}} \equiv \frac{\mathbf{1}}{\mathbf{2}} \mathbf{N}_{\mathbf{L}}^{\prime \prime \mathbf{T}} \mathbf{C}^{\dagger} \mathbf{M}^{\mathrm{D}+\mathrm{M}} \mathbf{N}_{\mathbf{L}}^{\prime}+\text { h.c. } \mathbf{M}^{\mathrm{D}+\mathbf{M}}=\left(\begin{array}{cc}
M^{L} & \left(M^{D}\right)^{T} \\
M^{D} & M^{R}
\end{array}\right)
\end{gathered}
$$

4. Some Consequences of Masses and Mixing

Single $\boldsymbol{\beta}$-Decay - Effective $\boldsymbol{\nu}_{e}$ Mass ${ }^{3} \mathrm{H} \rightarrow{ }^{3} \mathrm{He}+\mathrm{e}^{-}+\bar{\nu}_{\mathrm{e}} \quad Q=M_{\mathrm{H}}-M_{\mathrm{He}}-m_{e}=18.58 \mathrm{keV}$
$\frac{d \Gamma}{d T} \propto|\mathcal{M}|^{2} F(E) p E(Q-T) \sqrt{(Q-T)^{2}-m_{\bar{\nu}_{e}}^{2}}$
Kurie plot:
$K(T)=\sqrt{(Q-T) \sqrt{(Q-T)^{2}-m_{\bar{\nu}_{e}}^{2}}}$

$$
\mathbf{m}_{\bar{\nu}_{\mathbf{e}}} \rightarrow \mathbf{m}_{\beta}
$$

$$
m_{\nu_{e}}<2.2 \mathrm{eV}
$$

Troitsk \& Mainz (2002)

Future KATRIN sensitivity 0.2 eV

## Two Neutrino Double- $\beta$ Decay

$$
\Delta \mathrm{L}=0
$$

$$
\left(T_{1 / 2}^{2 \nu}\right)^{-1}=G_{2 \nu}\left|M_{2 \nu}\right|^{2}
$$

$N(A, Z) \rightarrow N(A, Z+2)+e^{-}+e^{-}+\bar{\nu}_{e}+\bar{\nu}_{e}$
second order weak interaction process

Neutrinoless Double- $\beta$ Decay

$\Delta L=2$
if Majorana particle

$$
\left(T_{1 / 2}^{0 \nu}\right)^{-1}=G_{0 \nu}\left|M_{0 \nu}\right|^{2}\left|m_{\beta \beta}\right|^{2}
$$

sensitive to phases
$N(A, Z) \rightarrow N(A, Z+2)+e^{-}+e^{-}$
effective Majorana mass

5. Effective Lagrangian Approach and Seesaw Mechanism

Effective Lagrangian

+ H. Georgi Lectures

SM is an Effective Lower Energy Theory

$$
\mathcal{L}_{\mathrm{eff}}=\mathcal{L}_{\mathrm{SM}}+\delta \mathcal{L}^{\mathrm{d}=5}+\delta \mathcal{L}^{\mathrm{d}=6}+\ldots
$$

non-renormalizable higher-dimension operators invariant under $S U(2)_{L} \times U(1)_{Y}$ made of SM fields active e low energies with coefficients (model dependent) weighted by inverse powers of $\Lambda$ (new physics scale)

$$
\delta \mathcal{L}^{\mathrm{d}=5}=\frac{\mathbf{g}}{\Lambda}\left(\mathrm{L}^{\mathrm{T}} \sigma_{2} \Phi\right) \mathrm{C}^{\dagger}\left(\Phi^{\mathrm{T}} \sigma_{2} \mathrm{~L}\right)+\text { h.c. }
$$

[S. Weinberg, Phys. Rev. Lett. 43, 1566 (1979)] only possible $d=5$ operator

$$
\delta \mathcal{L}^{\mathrm{d}=5} \underset{\text { EWSB }}{\Longrightarrow} \delta \mathcal{L}_{\mathrm{mass}}^{\mathrm{M}}=\frac{1}{2} \frac{\mathrm{gv}^{2}}{\Lambda} \nu_{\mathrm{L}}^{\mathrm{T}} \mathrm{C}^{\dagger} \nu_{\mathrm{L}}+\mathrm{hajorana} \mathrm{Mass}^{\mathrm{h} . \mathrm{c} .}
$$

$$

Majorana Mass Matrix for light neutrinos

Proposed Problems:

El.
Show explicitly why we need $1 / 2$ in the Majorana mass term

E2. Show that the most general mass term Lagrangian for a 4-component field

$$
\mathcal{L}_{D+M}=-m_{D} \overline{\Psi_{L}} \Psi_{R}-a \overline{\Psi_{L}^{c}} \Psi_{L}-b \overline{\Psi_{R}^{c}} \Psi_{R}+h . c .
$$

describes two Majorana particles with different masses. Discuss in what limit the 4-component Dirac formalism can be recovered.

Ez. How many physical phases there are in the mixing matrix if neutrinos are Major ana particles?

Proposed Problems:

EM.
Show that a Majorana mass matrix is, in general, a complex symmetric matrix that can be diagonalized by an orthogonal matrix.

Es.
Show that neutrinoless double beta decay implies in Majorana neutrinos. Can we distinguish Majorana from Dirac using neutrino interactions?

El.
Consider the two body decay $\pi^{-} \rightarrow \mu^{-}+\bar{\nu}_{\mu}$ at rest. Calculate the momentum $p_{i}$ and energy $E_{i}$ of mass $m_{i}$. as a function of the masses of the pion, the muon and $m_{i}$. Estimate, to first non-zero order in mi, the difference between $E_{i}$ and $p_{i}$. Can we assume the neutrinos produced in this decay have the same energy or momentum?

[^0]:    "We are happy to inform you that we have definitely detected neutrinos ..."
