

Introduction

DIRAC Tutorial

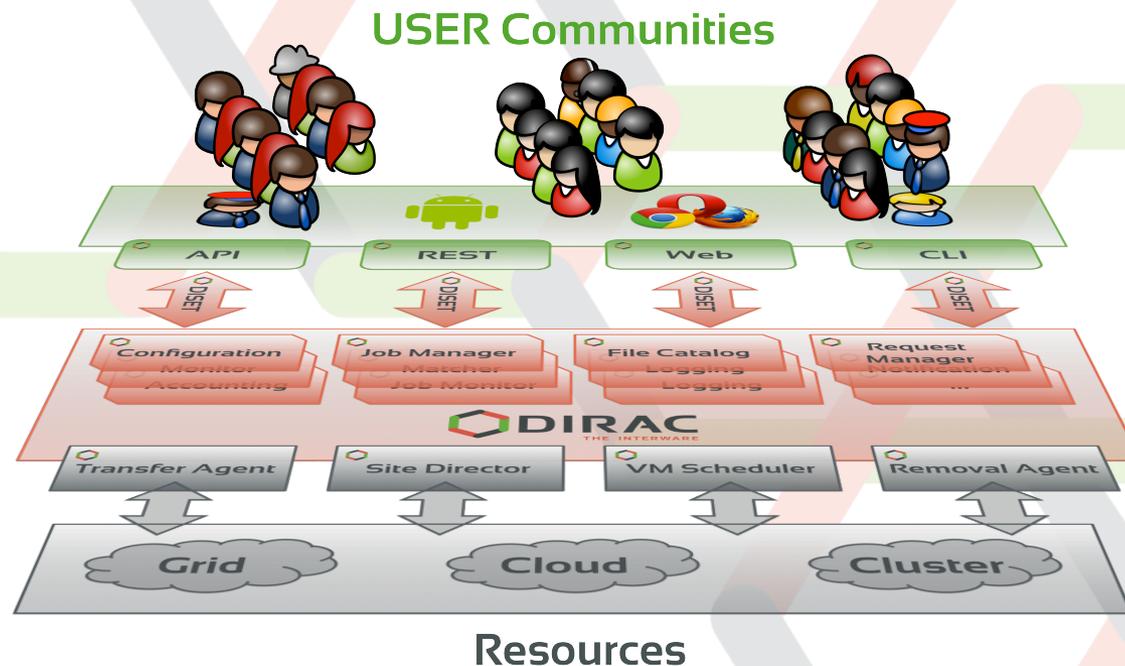

- ▶ DIRAC Project
- ▶ DIRAC interware
- ▶ DIRAC as a Service
- ▶ Tutorial plan

- ▶ LHC experiments pioneered the massive use of computational grids
 - ▶ 10s of PBytes of data per year
 - ▶ 100s of thousands CPUs in 100s of centers
 - ▶ 10s GB/sec network transfers
 - ▶ 100s of users from 100s of institutions
- ▶ CERN Director General Rolf Heuer about the Higgs discovery:

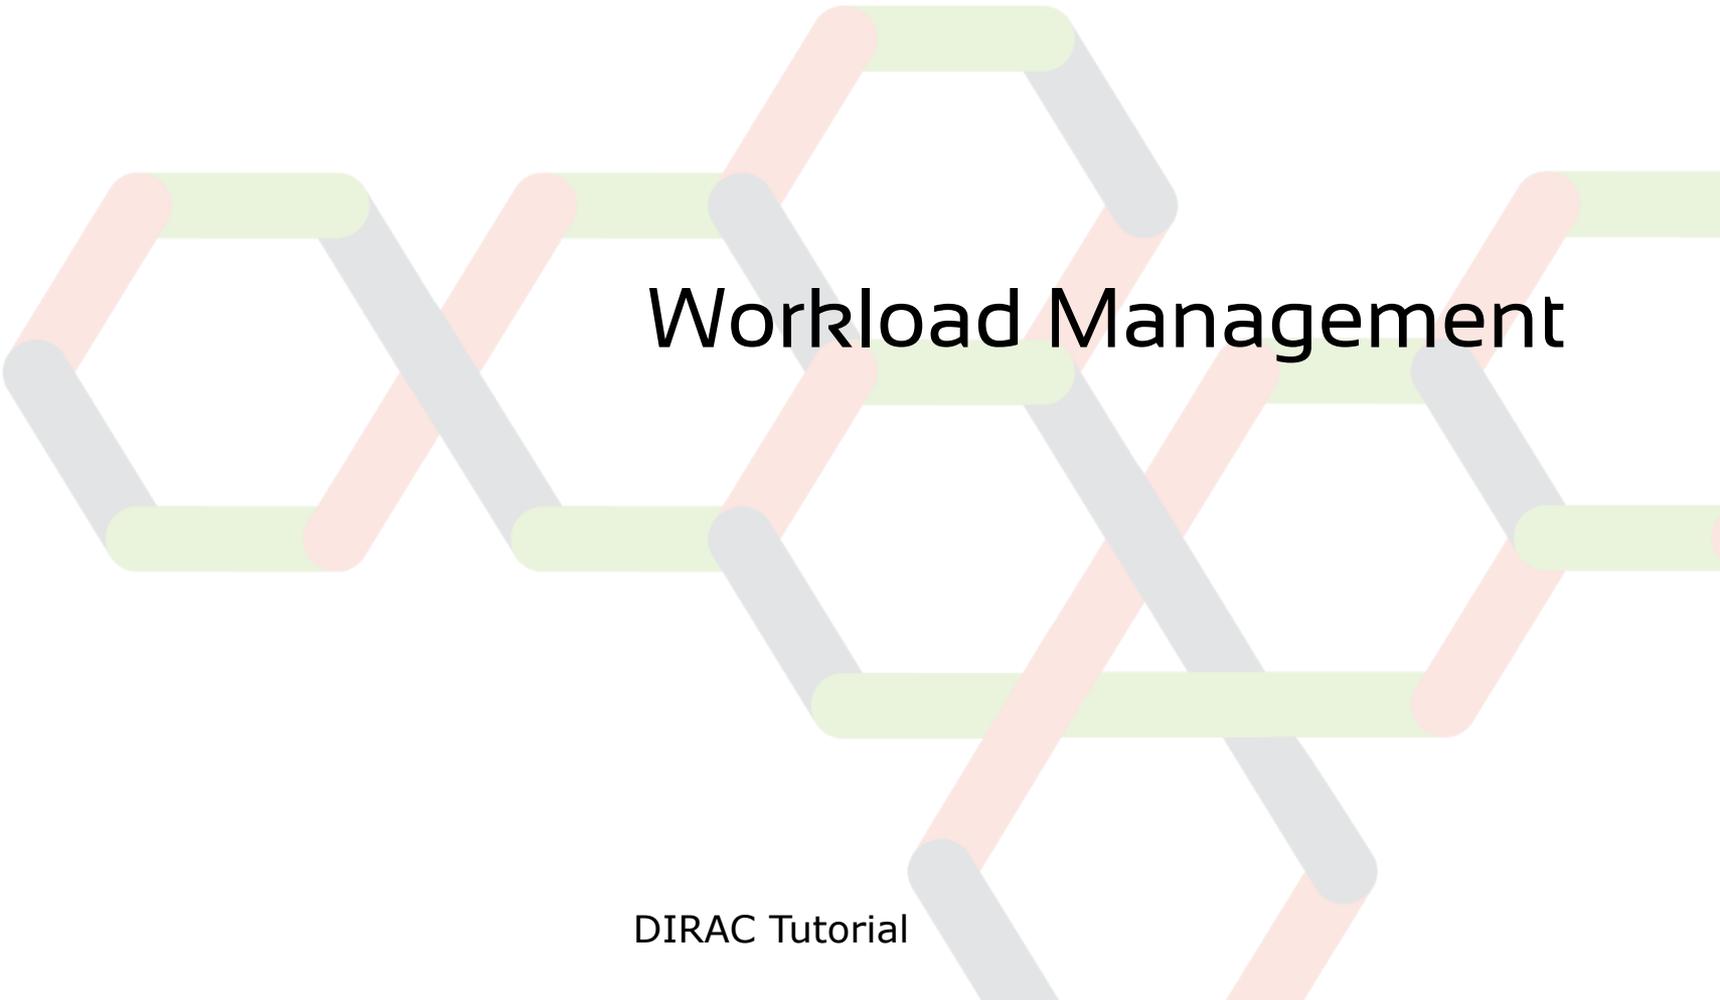

"It was a global effort and it is a global success. The results today are only possible because of the extraordinary performance of the accelerators, including the infrastructure, the experiments, and the *Grid computing*."
- ▶ Other domains are catching up quickly with the HEP experiments
 - ▶ Life sciences, earth sciences, astrophysics, social sciences, etc

- ▶ The computing expertise level in non-HEP scientific domains is relatively lower
 - ▶ Grouped around well known applications and scientific portals
 - ▶ Moving existing applications to run in distributed environments is still difficult
- ▶ Convenient tools for small research groups with no local gurus are clearly needed
- ▶ All LHC experiments developed their own middleware
 - ▶ PanDA, AliEn, glideIn WMS, PhEDEx, DIRAC, ...
 - ▶ WMS with pilot jobs, intelligent data management, software distribution, ...
- ▶ Experience of the LHC experiments in using distributed computing infrastructures should now be made available for non-LHC user communities

- ▶ DIRAC provides all the necessary components to build ad-hoc distributed computing infrastructures interconnecting resources of different types, allowing interoperability and simplifying interfaces. This allows to speak about the DIRAC *interware*.

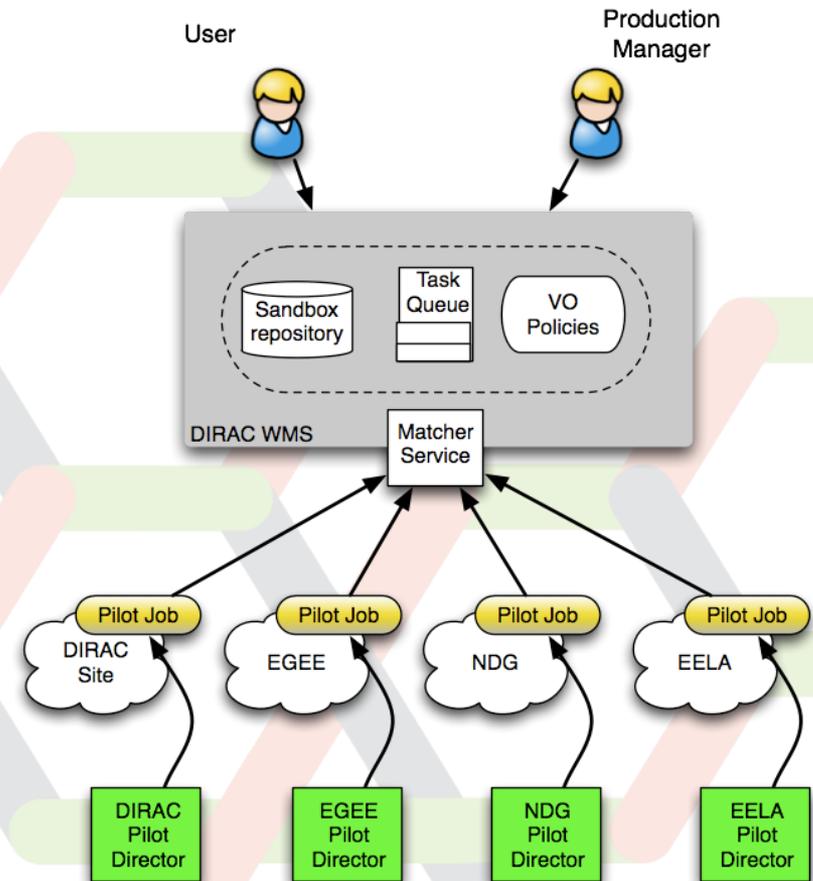

- ▶ Several new experiments expressed interest in using this software relying on its proven functionality
- ▶ In 2009 the core DIRAC development team decided to generalize the software to make it suitable for any user community.
 - ▶ Separate LHCb specific functionality into a set of extensions
 - ▶ Introduce new services to make it a complete solution
 - ▶ Support for multiple small groups by a single DIRAC installation
 - ▶ General refurbishing of the code, code management, deployment, documentation, etc
- ▶ DIRAC Consortium founded in 2013
 - ▶ CNRS, University of Barcelona and CERN
 - ▶ Development, maintenance and promotion of the DIRAC software
 - ▶ Consortium is the software copyright holder (GPL v3)
- ▶ This work made it possible to offer general-purpose DIRAC services to any scientific community

Workload Management

- ◆ Jobs are submitted to the DIRAC Central Task Queue with credentials of their owner (VOMS proxy)
- ◆ Pilot Jobs are submitted by specific Directors to a Grid WMS with credentials of a user with a special Pilot role
- ◆ The Pilot Job fetches the user job and the job owner's proxy
- ◆ The User Job is executed with its owner's proxy used to access SE, catalogs, etc

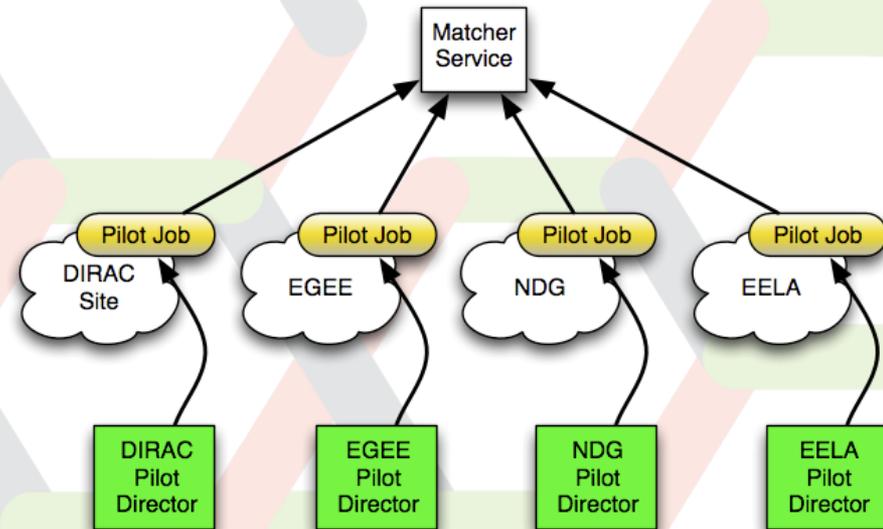

- ▶ Including resources in different grids and standalone clusters is simple with Pilot Jobs

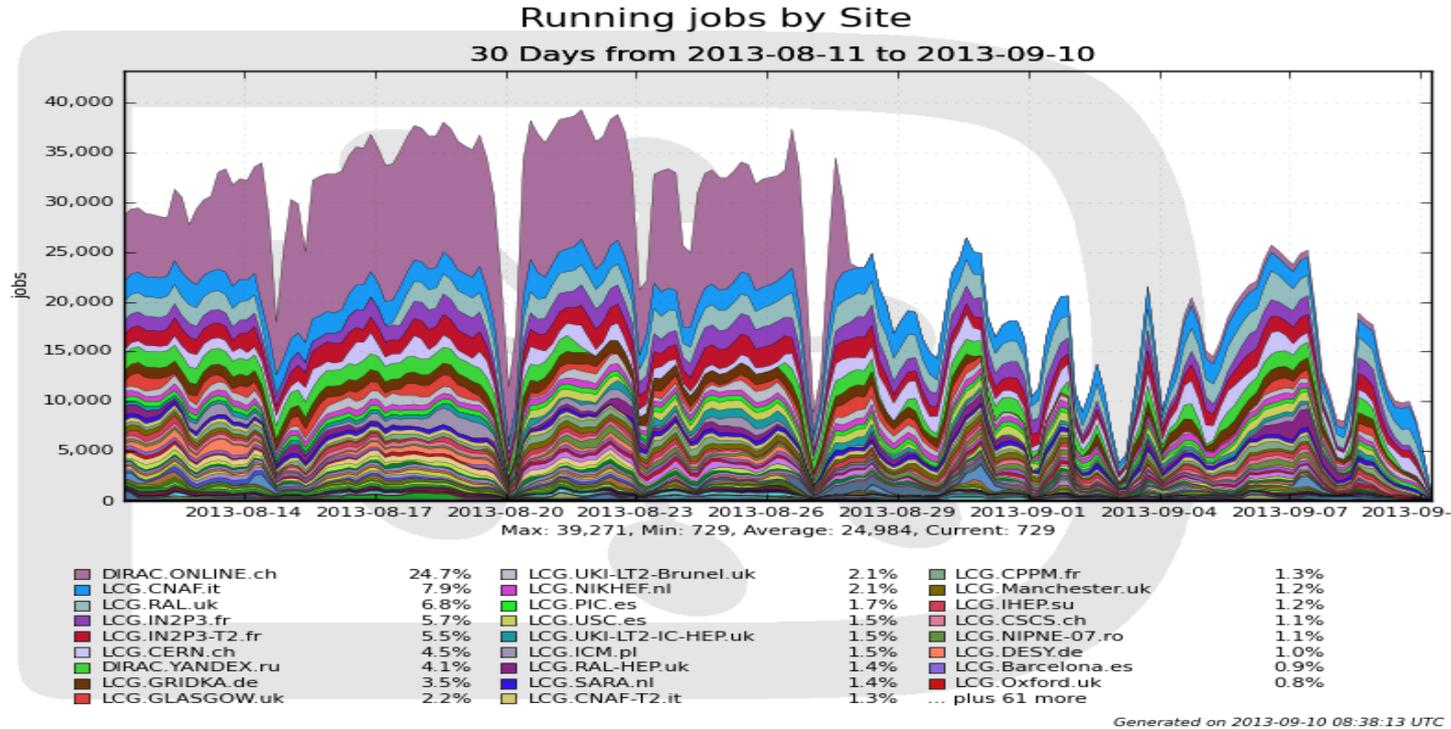

Needs a specialized Pilot Director per resource type

Demonstrated with various grid sites, clouds, etc

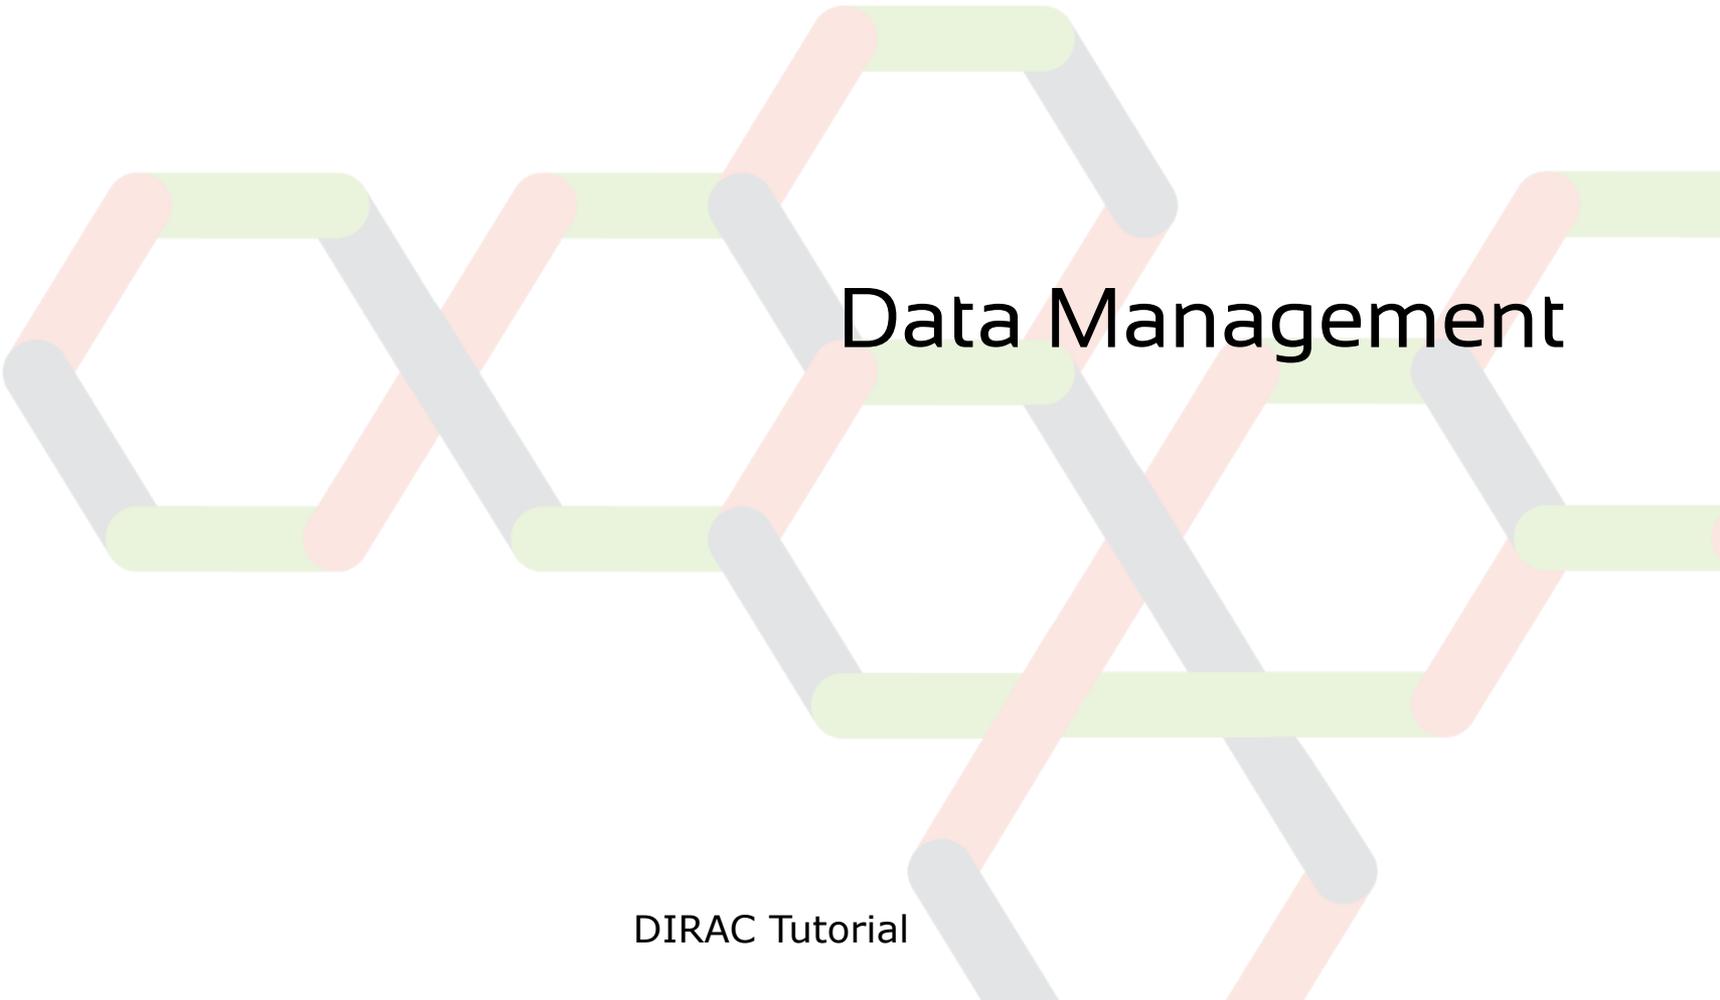

Users just see new sites appearing in the job monitoring

- ▶ DIRAC middleware facilitates access to various types of resources
 - ▶ gLite and ARC middleware based grids (EGI, NDGF, etc)
 - ▶ Standalone clusters
 - ▶ Simple SSH accessible account is sufficient to include the site
 - ▶ Clouds (Amazon, OpenStack, OpenNebula, OCCI compliant)
 - ▶ Automatic virtual machine scheduling
 - ▶ Desktop Grid
 - ▶ Based on BOINC technology
 - ▶ Support for multiple platforms with virtualization

- ▶ DIRAC performance in production
 - ▶ Up to 50K concurrent jobs in ~120 distinct sites
 - ▶ 10 mid-range central servers hosting DIRAC services
 - ▶ Further optimizations to increase capacity are possible

Data Management

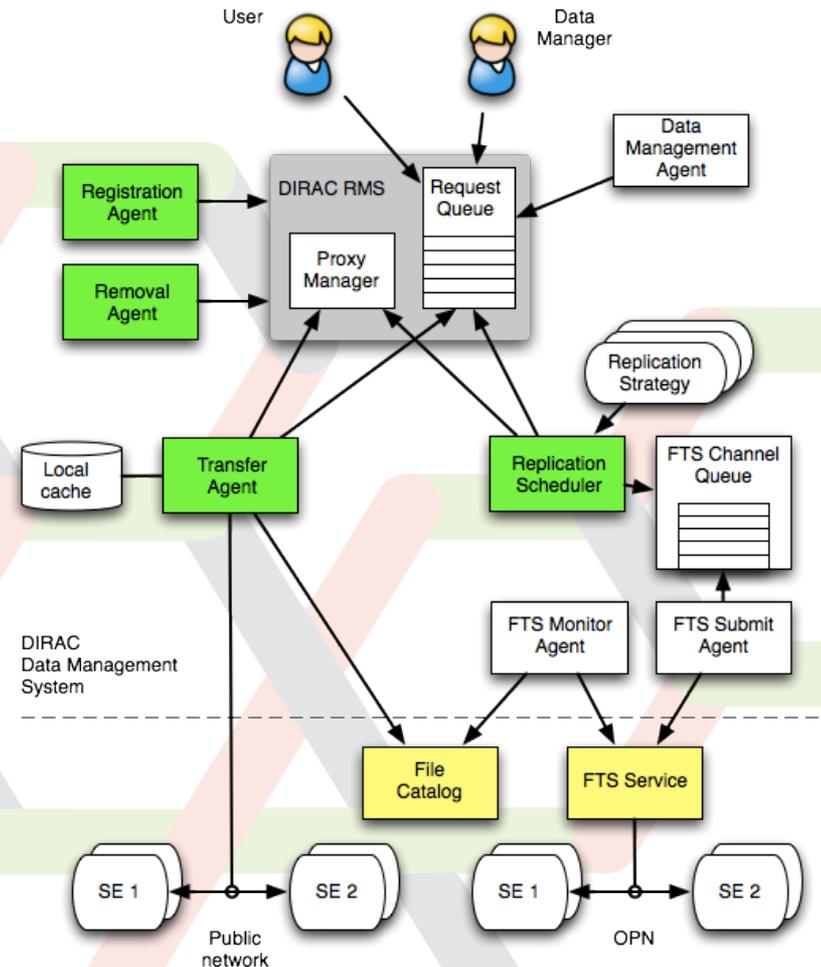

▶ Storage Elements

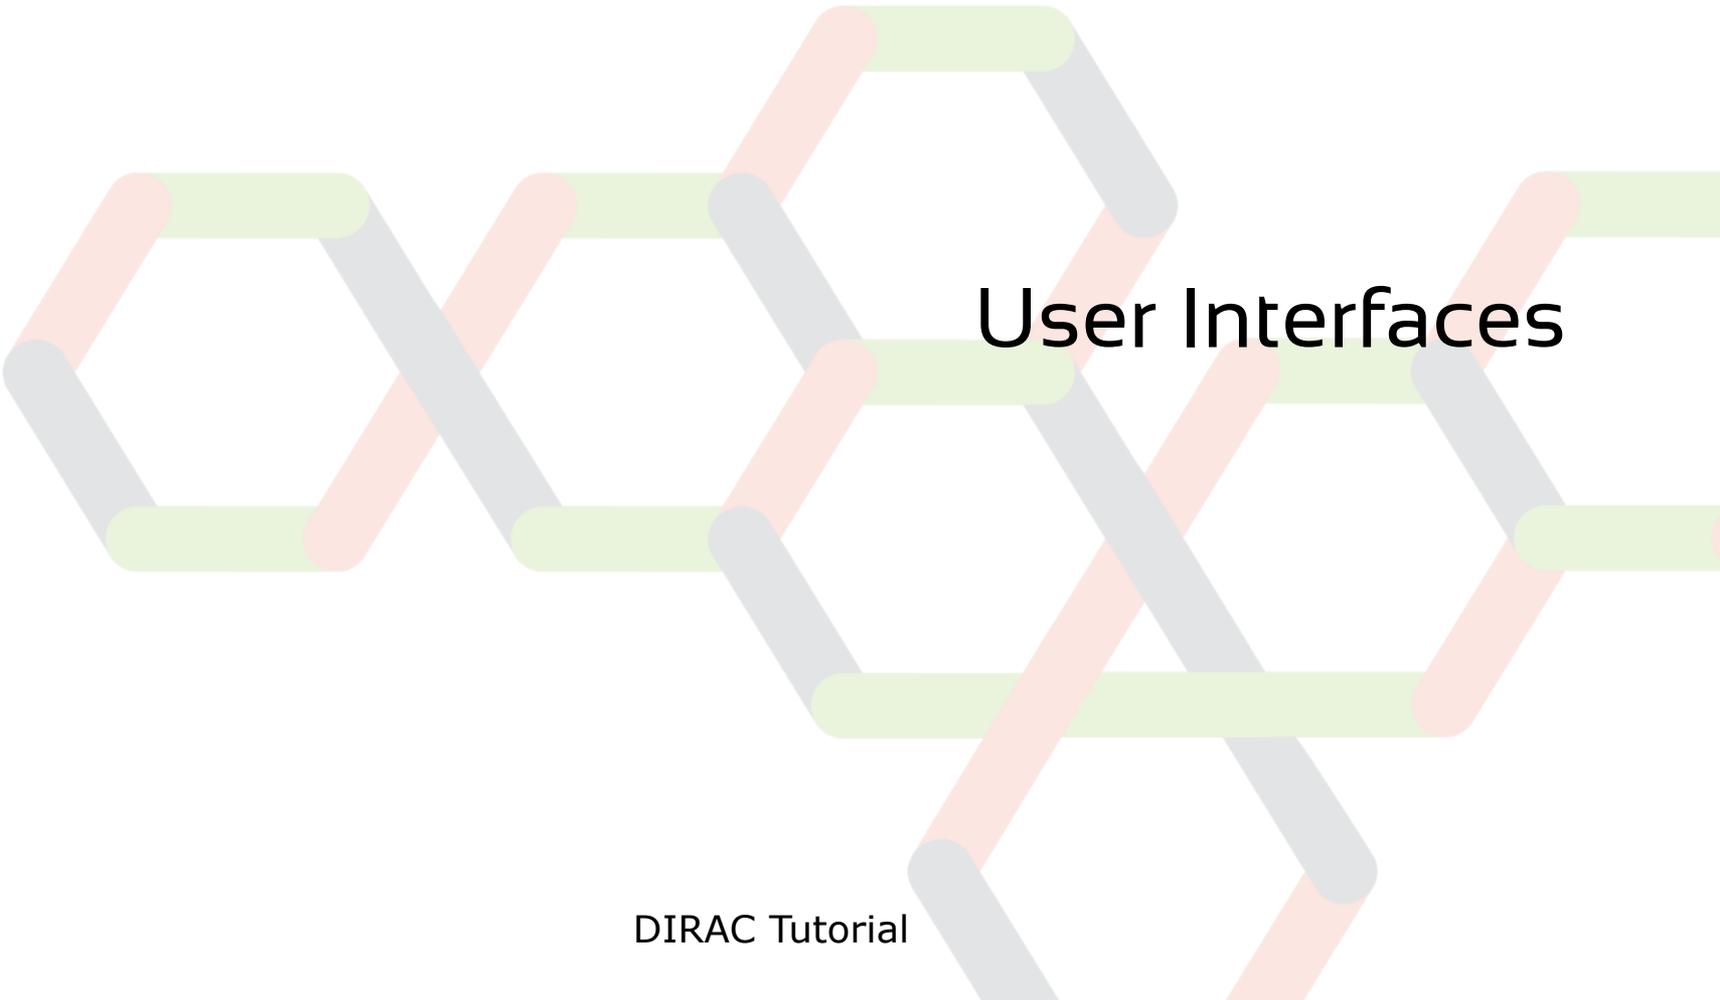

- ▶ gLite/EGI Storage Elements
- ▶ DIRAC Storage Elements
- ▶ More Storage Elements can be included
 - ▶ (F,SF,HT,BBF)TP servers
 - ▶ iRods, S3

▶ File Catalogs

- ▶ LCG File Catalog (LFC)
- ▶ DIRAC File Catalog
 - ▶ Support for the User Metadata
 - ▶ Support for data provenance
- ▶ More Catalogs can be included
 - ▶ LHCb has developed several specific catalogs in the same framework
- ▶ Different catalogs can be used together

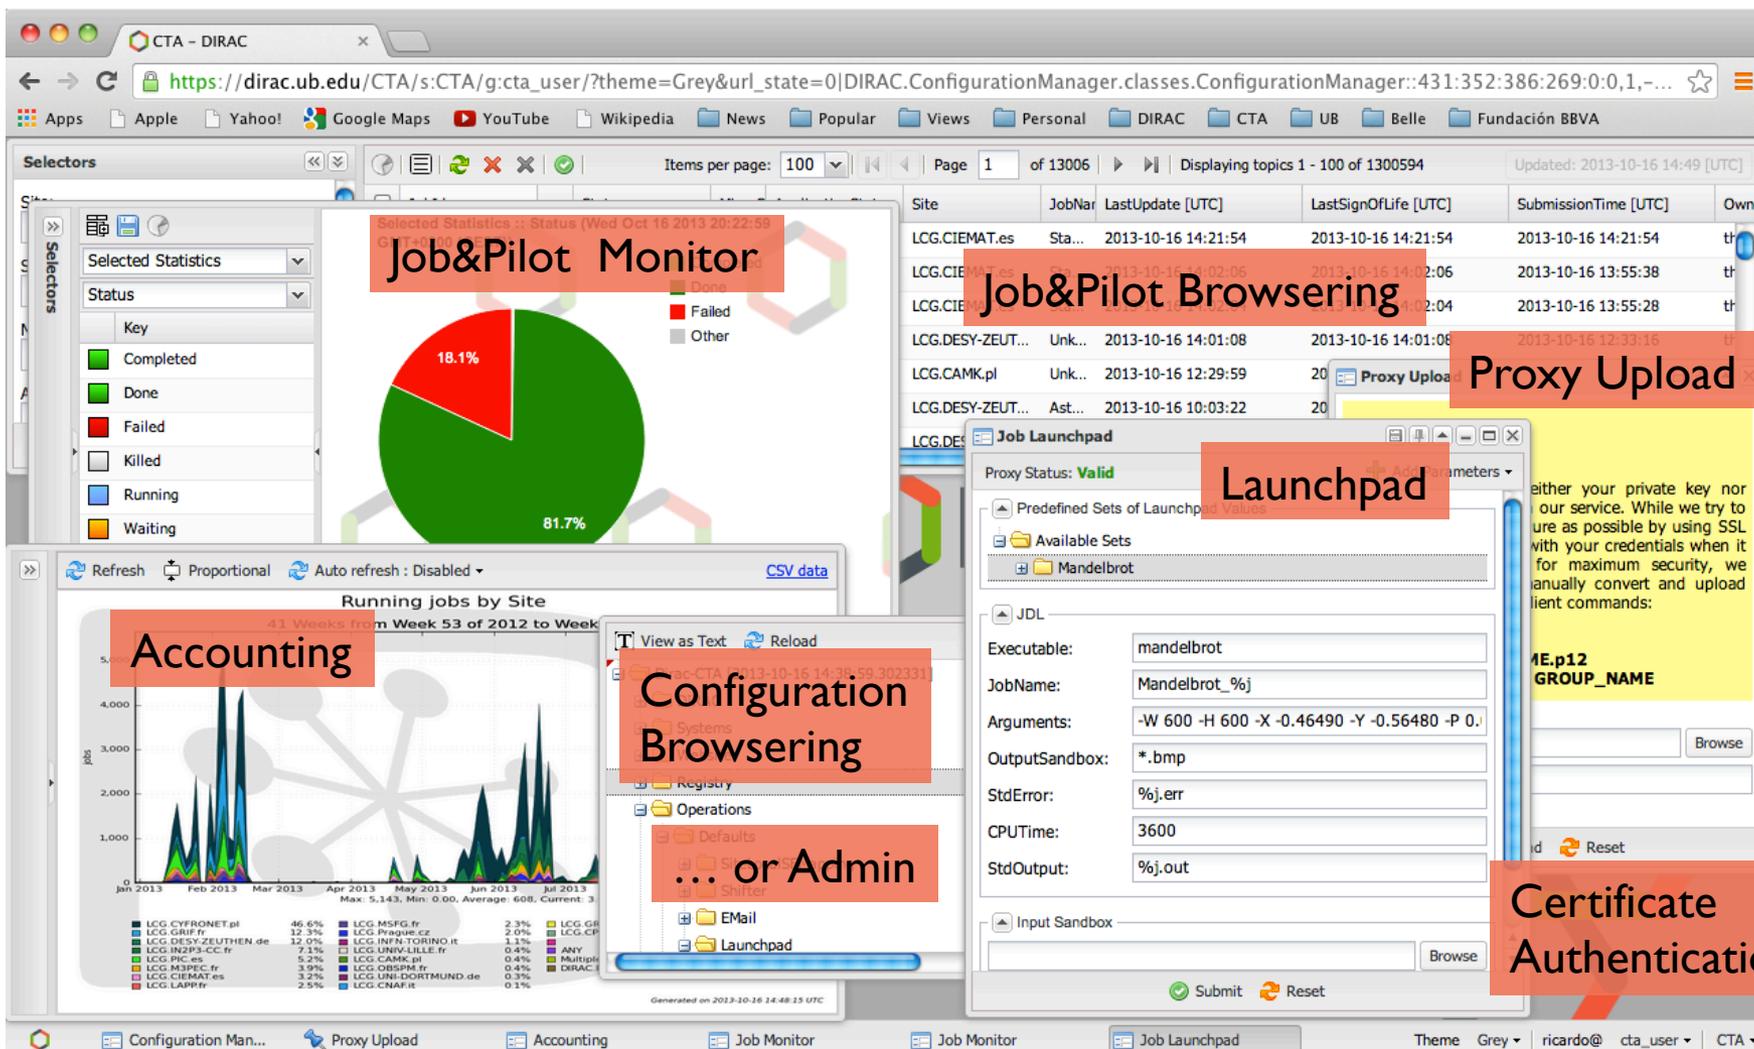

- ▶ Based on the Request Management System
- ▶ Asynchronous data operations
 - ▶ transfers, registration, removal
- ▶ Two complementary replication mechanisms
 - ▶ Transfer Agent
 - ▶ user data
 - ▶ public network
 - ▶ FTS service
 - ▶ Production data
 - ▶ Private FTS OPN network
 - ▶ Smart pluggable replication strategies

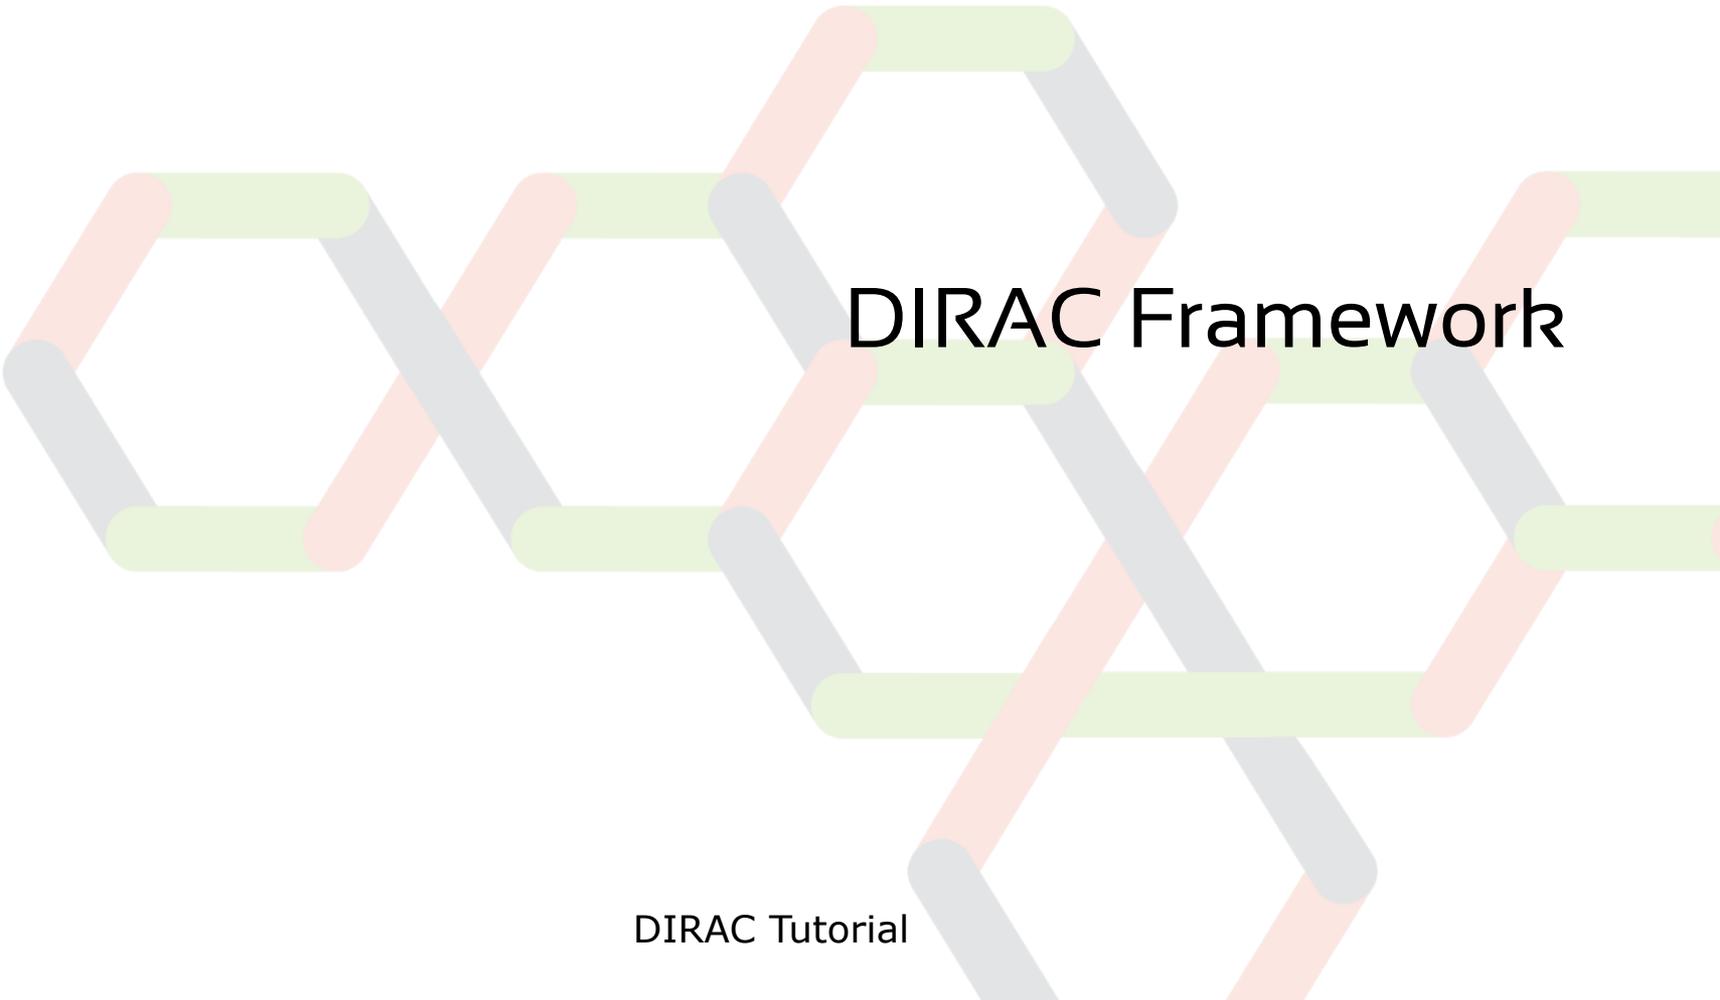

User Interfaces

- ▶ Focus on the Web Portal as the main user tool for interactions with the grid
- ▶ Intuitive desktop application like interface
 - ▶ Ajax, Pylons, ExtJS Javascript library
- ▶ Monitoring and control of all activities
 - ▶ User job monitoring and manipulation
 - ▶ Data manipulation and downloads
 - ▶ DIRAC Systems configuration and management
- ▶ Secure access
 - ▶ Standard grid certificates
 - ▶ Fine grained authorization rules

The screenshot shows the DIRAC web portal interface with several key components highlighted:

- Job&Pilot Monitor:** A pie chart showing job status distribution: 81.7% Done (green), 18.1% Failed (red), and 0.2% Other (grey).
- Job&Pilot Browsing:** A table listing jobs with columns for Site, JobName, LastUpdate [UTC], LastSignOfLife [UTC], SubmissionTime [UTC], and Owner.
- Proxy Upload:** A section for uploading proxy certificates, including a warning about SSL and a 'Browse' button.
- Launchpad:** A configuration window for a job launchpad, showing fields for Executable (mandelbrot), JobName (Mandelbrot_%j), Arguments (-W 600 -H 600 -X -0.46490 -Y -0.56480 -P 0.), OutputSandbox (*.bmp), StdError (%j.err), CPUTime (3600), and StdOutput (%j.out).
- Accounting:** A line graph showing running jobs by site over time, with a legend listing various sites and their percentages.
- Configuration Browsing ... or Admin:** A navigation menu with options like Registry, Operations, Defaults, Email, and Launchpad.
- Certificate Authentication:** A section for certificate authentication, including a 'Browse' button and a 'Reset' button.

DIRAC Framework

- ◆ Services oriented architecture (SOA)
- ◆ DIRAC has a well defined architecture

Services

passive components reacting to client request

Keep their state in a database

Light distributed agents

- ▶ permanently running components, animating the whole system

Clients

User interfaces

Agent-service, service-service communications

▶ Technologies

- ▶ Python, MySQL, OpenSSL

- ▶ All the communications between the distributed components are secure

DISET custom client/service protocol

Focus on efficiency

Control and data communications

X509, GSI security standards

Fine grained authorization rules

- ▶ Framework allows to easily build these components concentrating on the business logic of the applications

Making use of rich base services

▶ **Redundant Configuration Service**

Provides service discovery and setup parameters for all the DIRAC components

Full featured proxy management system

Proxy storage and renewal mechanism

Support for multiuser pilot jobs

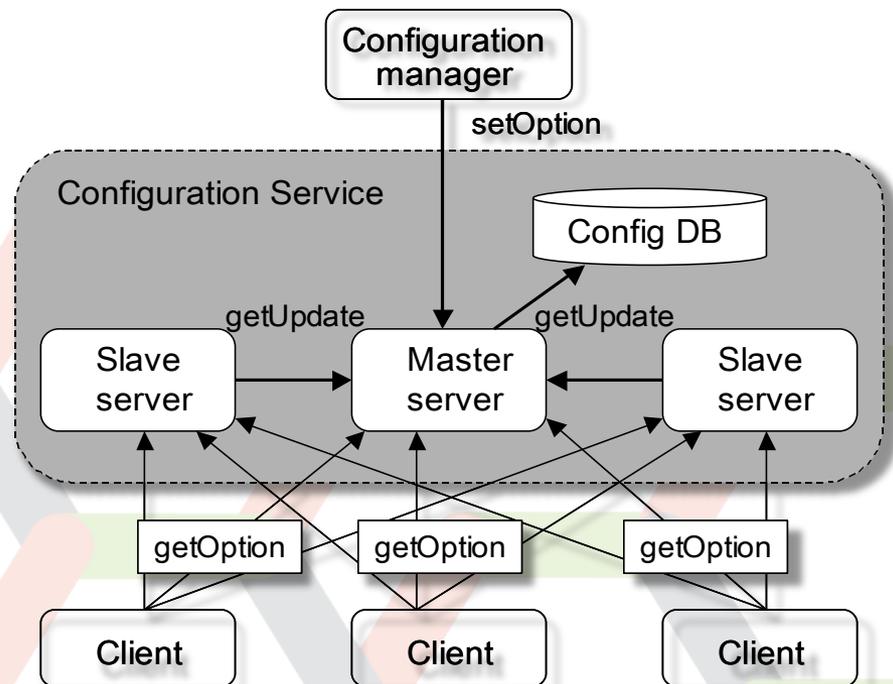

System Logging service

Collect essential error messages from all the components

Monitoring service

Monitor the service and agents behavior

▶ **Accounting service**

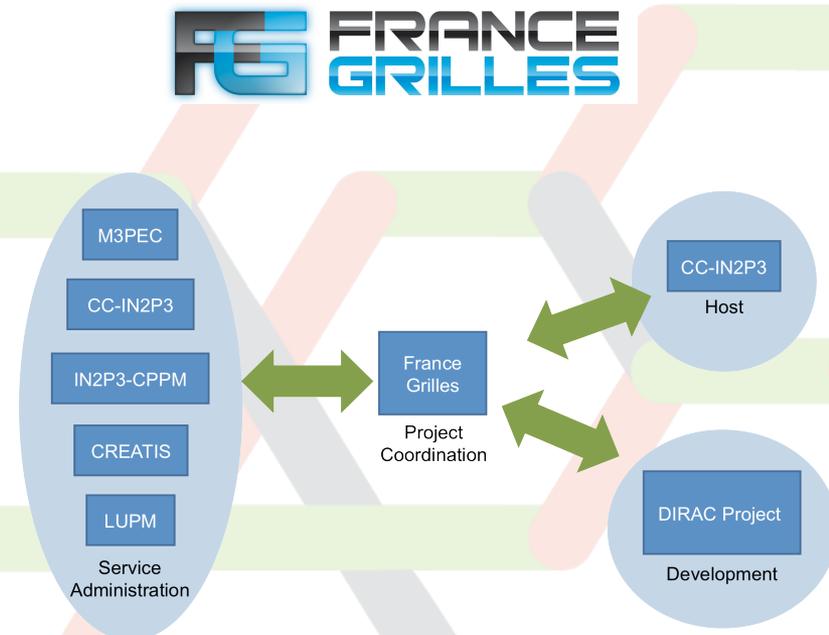

DIRAC as a Service

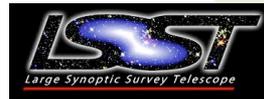

- ▶ DIRAC client is easy to install
 - ▶ Part of a usual tutorial
- ▶ DIRAC services are easy to install but
 - ▶ Needs dedicated hardware for hosting
 - ▶ Configuration, maintenance needs expert manpower
 - ▶ Monitoring computing resources is a tedious every-day task
- ▶ Small user communities can not afford maintaining dedicated DIRAC services
 - ▶ Still need easy access to computing resources
- ▶ Large grid infrastructures can provide DIRAC services for their users.

- ▶ **DIRAC** services are provided by several National Grid Initiatives: France, Spain, Italy, UK ...
- ▶ **Example: France-Grilles DIRAC service**
 - ▶ Hosted by the CC/IN2P3
 - ▶ Distributed administrator team
 - ▶ 5 participating universities
 - ▶ 15 VOs, ~100 registered users
 - ▶ In production since May 2012
 - ▶ 7 millions jobs
- ▶ **DIRAC 4 EGI service is being setup**

- ▶ Heavily used for the grid tutorials
 - ▶ Using resources of the VO france-formation
- ▶ Support for users, applications
 - ▶ Forum for experience dissemination
 - ▶ Help in porting applications to the grid
 - ▶ Help new communities to try out DIRAC for their production systems

- Fermi-LAT, Glast
- LSST
- CTA
- ...

DIRAC has most of the features of a “standard” Grid middleware stack

Power users will see extra support:

- Massive job execution

- Data operations

Developers can easily add new functionalities specific for their applications

Community administrators get tools to apply community policies

- User and group priorities, quotas

Site administrators can easily include their resources

- Easy addition of new resources without bulky installation

- Easy user management with only one “VO user”

The DIRAC project is in full development

- More new exciting features to come – stay tuned !

- Your contributions are welcome

Getting Started

DIRAC client installation

Getting ready user credentials

Job execution mechanics

Basic job operations with Web Portal explained

Job manipulation tools

Submission, monitoring, getting results

Basic data management operations

Data upload, download, replication

Advanced job operations

Jobs with input and output data

Bulk job submission

Emphasis on exercises

Agenda: <https://indico.in2p3.fr/conferenceDisplay.py?confId=9461>

- ▶ DIRAC service installation at *dirac.france-grilles.fr*

The service used for the tutorial is permanent, will stay in place afterwards

Resources

EGI sites

Computing Elements

Storage Elements

- ▶ One DIRAC SE (DIRAC-USER)
- Several SRM EGI SE's

Tutorial materials are available here

<https://github.com/DIRACGrid/DIRAC/wiki/DIRAC-Tutorials>

- ▶ The course will be given by the members of the DIRAC Project team (<http://diracgrid.org>)
- ▶ Tutors:
 - ▶ Andrei Tsaregorodtsev – DIRAC Project Coordinator, CPPM/Marseille
 - ▶ Vanessa Hamar – Responsible for the DIRAC production infrastructure DIRAC France-Grilles NGI, CC/IN2P3
 - ▶ Sorina Camarasu Pop – Member of the DIRAC France-Grilles service administrator team, CREATIS/Lyon
