

Villeurbanne, June 20<sup>th</sup> 2008

We agreed on following points :

- The CCIN2P3 will supply an instance of the CIC portal (EGEE Operations Portal), comprising an instance of the underlying component Lavoisier, dedicated to the development of a version of this portal for the use of EELA. When this work is sufficiently advanced which has to be determined together some time later, this instance will be hosted by another EELA partner.
- The initial work will be concentrated on replacing the interface of the portal to GGUS by EVENTUM. Other components to be replaced will follow (SAM, EELA DB instead of GOCDB, addition of APP DB). The last one will be the change from the Oracle DB to MySQL. At latest at that point another EELA partner will start to host its adapted instance of the portal and Lavoisier itself. This should be achieved in EELA project month 12 which is March 2009.
- The work itself will be executed mainly by one person funded by EELA but recruited according to a profile determined by CCIN2P3. The final selection will be done by CCIN2P3. The profile has to be determined during the next week, i. e. until end of June 2008. This person will work for 1 year at the premises of the CCIN2P3.

In addition, CCIN2P3 is ready to collaborate on the potential use of JSAGA. Lavoisier, already part of the collaboration for the portal, may also be used by EELA outside of that particular context.

Other cooperations on topics like middleware configurations or on operational subjects can be agreed upon when the occasion arises and both sides are interested.

Any formal project requirements to accomplish the preceding items will be fulfilled by EELA and CCIN2P3.
